Re: **Colonial Pipeline SR 2448/Pipeline ROW**
Incident Number 95827
Huntersville, North Carolina

Dear Dan,

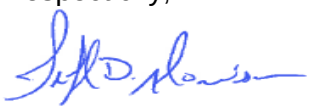
Colonial Pipeline Company (Colonial) is pleased transmit the Initial Assessment Report (IAR) regarding the above-referenced incident.[1] The report was prepared in conjunction with Apex Engineering, P.C.

Although Colonial is not required to submit this IAR until 90 days from the discovery of the release (which, in this instance, would be November 12, 2020), Colonial is pleased to provide this report to NC DEQ in advance of that deadline. Colonial hopes that providing this information before the deadline will prove helpful to NC DEQ and that once NC DEQ reviews the information, the Department will appreciate the breadth of the site assessment that Colonial has already performed at the site.

As Colonial discussed with DEQ this week, due to the complex nature of liquid pipeline operations, calculating an estimated released volume is an intricate task that requires the thoughtful and detailed analysis of several different data points. Colonial is still in the process of collecting and analyzing environmental information that is critical to our ability to accurately estimate the volume released. Colonial is committed to working with the DEQ to review information in a collaborative manner as we continue to analyze this data to determine an estimate of the volume released. Additionally, Colonial is preparing to cut out the section of the pipeline where the release occurred and to conduct a metallurgical analysis and to confirm the type and extent of the defect. That work is currently scheduled to begin the week of November 9th and is expected to take approximately 6 weeks, and once it is complete, it will provide another critical data point for the released volume calculation.

If you have any questions or require additional information, please contact either myself at 770.819.3566 / jmorrison@colpipe.com or John Culbreath at 704.399.5259 / jculbrea@colpipe.com.

Respectfully,



Jeff D. Morrison
Environmental Program Specialist

[1] The IAR also includes the monthly groundwater monitoring information for October 2020, as required by the September 25, 2020, Notice of Violation.

1.0 INTRODUCTION

A gasoline release was discovered on August 14, 2020 in an area approximately 350 feet northeast of where the Colonial Pipeline Company (CPC) pipelines cross Huntersville-Concord Road (State Road [SR] 2448). The release occurred from the CPC's Line 1. The release is referred to herein as the 2020-L1-SR2448 Release. A Site Location Map is provided as **Figure 1** and a Site Plan is provided as **Figure 2**. CPC promptly commenced abatement and corrective action measures in addition to an investigation of the source of the release. This report summarizes the incident response and abatement and assessment activities associated with the 2020-L1-SR2448 Release.

2.0 SITE INFORMATION

- Date of Report: October 30, 2020
- Facility I.D.: N/A Incident Number: 95827 Site Rank: N/A
- Site Name: Colonial Pipeline Company – 2020-L1-SR2448
- Site Street Address: 14511 Huntersville-Concord Road
- City/Town: Huntersville Zip Code: 28078 County: Mecklenburg County
- Description of Geographical Data Point: 350 Feet Northeast of SR 2448/CPC ROW
- Location Method: GPS
- Latitude: 35.414106 Longitude: -80.806185

2.2 Information about Contacts Associated with the Release

- Owner: Colonial Pipeline Company
  Address: 1185 Sanctuary Parkway, Suite 100, Alpharetta, GA Telephone: 678-762-2200
- Operator: Colonial Pipeline Company
  Address: 1185 Sanctuary Parkway, Suite 100, Alpharetta, GA Telephone: 678-762-2200
- Property Owner/Occupant: Mecklenburg County
  Address: 600 E. 4th Street, 11th Floor, Charlotte, NC Telephone: 704-336-3000
- Consultant/Contractor: Apex Companies, LLC
  Address: 5900 Northwoods Business Pkwy, Suite 5900-O, Charlotte, NC Telephone: 704-799-6390
- Analytical Laboratory: Pace Analytical Services, LLC State Certification No.:375
  Address: 9800 Kincey Avenue, Suite 100, Huntersville, NC Telephone: 704-875-9092

2.3 Information about Release

- Date Discovered: 8/14/2020
- Estimated Quantity of Release: Estimate TBD[1]
- Cause of Release: Under Investigation
- Source of Release: Line 1
- Sizes and contents of UST(s) or other containment from which the release occurred: N/A

[1] An estimate of 272,580 gallons was provided to PHMSA on September 14, 2020 as part of Colonial's 7000.1 report. As NCDEQ is aware, Colonial is actively evaluating a dynamic set of facts and factors that influence estimates of product released. Estimates of recovered volumes are included within the report; these amounts are under review and subject to change.

2.4 Certification

I, Tom Nauman, P.G., a Licensed Geologist for Apex Companies, LLC (d.b.a Apex Engineering, P.C.; Apex) do certify that the information contained in this report is correct and accurate to the best of my knowledge. Further, I hereby attest that certain emergency response information documented in this report was collected by third parties that were not under contract to Apex and/or were not working under my direction or supervision.

Apex Engineering, P.C. is licensed to practice geology and engineering in North Carolina. The geology certification number of the company is C-519.

3.0 SITE HISTORY AND CHARACTERIZATION

On August 14, 2020, CPC and local emergency response agencies were notified of a suspected gasoline release within the CPC right of way (ROW) on the Oehler Nature Preserve near the intersection of SR 2448 (**Figure 2**). Line excavation and inspection in the release area confirmed the source of the release as coming from CPC Line 1 and the released product was confirmed to be gasoline. The release was promptly controlled, and CPC immediately initiated soil excavation and free product recovery efforts.

The area within a 1,500 foot radius of the Site is a mixture of low density residential properties, agricultural properties and wooded land. Properties within a 1,500 foot radius of the release area obtain potable water from public water supply or private water supply wells (**Figure 3**). The Site is located within the Yadkin Pee-Dee River Basin. North Prong Clarke Creek is located approximately 1,800 feet north of the release area and South Prong Clarke Creek is located approximately 2,700 feet south of the release area, both of which are characterized by the North Carolina Department of Environmental Quality (NCDEQ) Division of Water Quality as Class C water bodies meaning that they are protected for non-drinking water purposes such as biological integrity, fishing, and infrequent secondary recreational purposes (i.e., wading).

Mecklenburg County is located within the Piedmont physiographic province, characterized by rolling hills and moderately steep valleys formed by stream erosion of upland areas. Average relief is less than 100 to 150 feet between the upland areas and the stream valleys. Elevations at the Site range from approximately 650 to 750 feet above mean sea level. The surficial soils at the Site consist almost entirely of fine-grained clayey to silty saprolite developed from the weathering of the underlying bedrock. The soil thickness ranges from a few feet to greater than 60 feet. Borings completed indicate the Site is underlain by quartz diorite.

A typical hydrogeologic unit in the Piedmont province is characterized as a single water-bearing zone formed by the saprolite overburden (residuum) and the underlying consolidated bedrock. Saprolite is formed from in-situ chemical weathering of the parent bedrock and exhibits relic structures and textures of the parent rock. The saprolite hydrostratigraphic unit acts as a reservoir to receive and store water that discharges to nearby surface water bodies and recharges the underlying bedrock unit. Groundwater can occur under water table conditions in the saprolite where it fluctuates in response to

recharge. Saprolite may also act hydraulically as a semi-confining unit if its permeability is much less than the permeability of the underlying bedrock. Surficial groundwater at the Site is estimated to flow in a general northerly and southerly direction (**Figure 4**). Groundwater in the bedrock unit can occur under confined, semi-confined, or unconfined conditions. Within the bedrock unit, groundwater is transmitted through, and stored in, secondary joints and fractures. Secondary porosity of the bedrock unit is dependent on size, density, and interconnections of the fractures. Bedrock porosity is generally much less than the porosity of saprolite. Distribution and interconnections of fractures can control local groundwater flow directions and velocities in bedrock.

Based on risk-based rules established under House Bill 765, Risk Based Corrective Action (RBCA) Rules, which were established for releases from petroleum underground storage tanks (USTs), are also applicable to non-UST releases of petroleum. Under the RBCA framework, corrective action objectives for impacted-groundwater at the Site are based on risk classification criteria and the associated remedial goals established under North Carolina 15A NCAC 2L .0506 regulations. The risk classification for a site is based on several factors, including the distance from the source area of a release to receptors such as surface water bodies and water supply wells. The risk classification for the Site is 'high risk' due to the presence of multiple water supply wells within 1,000 feet of the release (**Figure 3**). Groundwater remediation goals for sites classified as high risk are the 2L Groundwater Quality Standards.

4.0 INITIAL RESPONSE AND ABATEMENT ACTION

CPC and local emergency response agencies were notified of suspected petroleum product surfacing within the CPC right of way on the Oehler Nature Preserve near the intersection of SR 2448 (**Figure 2**) on August 14, 2020 at 18:20. Colonial personnel confirmed a product release at 18:42, believed to be gasoline. Colonial personnel contacted the CPC Control Center in Alpharetta, Georgia to provide notification of the visible release and the Control Center initiated shutdown of Lines 1 and 2 at 18:43. The lines were blocked by closing valves upstream of the release location at CPC Charlotte Delivery Facility and downstream of the release location at CPC Kannapolis Station. Notifications were made to Mecklenburg County, the United States Environmental Protection Agency (EPA), the NCDEQ and the Pipeline and Hazardous Material Safety Administration (PHMSA). CPC mobilized internal and emergency response contractor resources to the Site and established an Incident Command Post to support the response activities. Line excavation and inspection on August 14, 2020 confirmed the release was gasoline from CPC's Line 1 at approximately 24:00. The release was promptly controlled, and free product recovery efforts were initiated. CPC has recovered approximately 90,930 gallons of free product from the release source location during initial response activities. As of October 26, 2020 CPC has recovered an additional 240,379 gallons of free product from the recovery well network and free product recovery systems.

5.0 EXCAVATION OF CONTAMINATED SOIL

Approximately 800 tons of petroleum-impacted soil were excavated by STAT, Inc. of Lenior, North Carolina beginning on August 14, 2020 during efforts to expose Line 1 and Line 2 and to identify the release location. An excavation measuring approximately 35 feet by 40 feet by 10 feet deep was completed to expose Lines 1 and 2 at the release location and to install a steel sleeve over the damaged section of pipe. Additional source area soil removal activities associated with the line inspection, repair, and recoating activities are underway. To date, over 4,000 tons of petroleum impacted soil have been excavated from the release source area. Soil was transported to the Charlotte Motor Speedway Landfill located in Concord, North Carolina and operated by Republic Services (Permit No. 1304-MSWLF-1992). Copies of waste manifests are provided as **Appendix A**. Post-excavation confirmation sampling activities are planned prior to backfilling activities.

5.1 Initial Soil Assessment Activities

A total of 134 hand auger borings and 18 test pits were installed between August 16, 2020 and September 1, 2020 to variable depths ranging from approximately 3 feet to 29 feet below ground surface (bgs). Test pits were typically advanced to the vertical limit of the excavation equipment capabilities and assessed for the presence or absence of gross petroleum impact based on visual and olfactory indications. Soil samples were retrieved from the boreholes and screened with a photoionization detector (PID) as a preliminary means for assessing the presence or absence of petroleum impacts in shallow soil. Soil borings with maximum PID readings of <50 parts per million (ppm) and >50 ppm total volatile organic compounds (VOCs) were designated as non-impacted and impacted, respectively, for preliminary soil delineation purposes. The hand-auger borings and soil impacted/non-impacted determinations are summarized in **Table 1**. Hand-auger boring and test pit locations are shown on **Figure 5**.

Additional soil assessment activities were completed during monitoring well and recovery well installation activities. The objective of the work was to perform a preliminary delineation of petroleum impacts in soil to concentrations below NCDEQ Maximum Soil Contaminant Concentrations (MSCCs). Soil borings were advanced with either a Geoprobe® direct-push drill rig or a sonic drill rig. The Geoprobe® direct-push drill rig was operated by S&ME, Inc. under the direction of AECOM. The sonic drill rigs were operated by Walker-Hill Environmental and Cascade Drilling LP under the direction of Apex. Soil cores were retrieved, and samples were collected at 2.5 foot to 5 foot intervals, placed in airtight containers and allowed to equilibrate for approximately 15 minutes before measuring VOC headspace readings with a PID. The samples exhibiting the highest headspace readings were typically selected for chemical analysis unless free product is present. In cases where there were no significant PID measurements in a boring, the depth interval corresponding to the terminus of the unsaturated zone was typically selected for chemical analysis.

A total of 128 soil samples were selected from 66 borings and submitted to Pace Analytical Services, LLC (Pace) of Huntersville, North Carolina for laboratory analysis of the following chemical specific parameters in accordance with NCDEQ requirements:

- VOCs by EPA Method 8260D; and
- Volatile Petroleum Hydrocarbons (VPH) by the Massachusetts Department of Environmental Quality (MADEP) Method.

Results of the chemical specific laboratory analysis are summarized in **Table 2** and **Table 3**, and on **Figure 6**. Laboratory analytical reports are provided in **Appendix B**. Boring logs indicating soil sample intervals and PID readings are provided in **Appendix C**.

6.0 FREE PRODUCT INVESTIGATION AND RECOVERY ACTIVITIES

Free product recovery efforts were initiated on August 14, 2020, immediately after the release was controlled. Vacuum trucks operated by multiple emergency release contractors mobilized to the Site to recover free product from the line excavation and nearby seepage areas. Absorbent booms were installed in proximate swales west of the release area. Approximately 90,930 gallons of free product were recovered at the release source location during initial response activities, thereby mitigating the volume released into the subsurface.

A Geoprobe® direct-push drill rig and hollow stem auger drill rig were deployed to the Site on August 23, 2020. Free product was encountered in direct push boring TW-1, at a depth of approximately 32 feet bgs on August 23, 2020. A stinger pipe was installed in the boring and connected to a vacuum truck as an interim means of free product recovery. Sonic drill rigs were deployed to the Site on August 27, 2020 and September 1, 2020, respectively, to drill and install recovery wells in the release source

area. Between August 27, 2020 and October 4, 2020, a total of 40 recovery wells were installed within the release source area, including overdrilling of TW-1.

Free product was separated from petroleum contact water in frac tanks. Recovered free product and petroleum contact water were transported to the Midwest Gas Company located in Columbus, Ohio, for recycling and disposal. Copies of bills of lading are provided as **Appendix A**.

7.0 SURFACE WATER AND SEDIMENT INVESTIGATION ACTIVITIES AND RESULTS

The Site is located within the Yadkin Pee-Dee River Basin. North Prong Clarke Creek is located approximately 1,800 feet north of the release area and South Prong Clarke Creek is located approximately 2,700 feet south of the release area, both of which are classified as Class C water bodies by the NCDEQ Division of Water Resources. A groundwater seep and ephemeral stream are located approximately 1,200 feet southeast of the release area. The ephemeral stream flows to South Prong Clarke Creek.

Surface water sampling was conducted by Environmental Planning Specialists, Inc. (EPS) daily at 12 locations (SW-1 through SW-12) from August 15, 2020 through August 22, 2020 (**Appendix D - Figure 1**). Weekly surface water sampling was performed at locations SW-1 through SW-7 beginning on August 27, 2020. Surface water samples were also collected after rain events equal to or greater than one-inch during a 24-hour period. Qualifying rain events occurred each day between September 1 and September 3, 2020, and surface water samples were collected. Surface water samples were also collected from groundwater seep location (SW Seep) and the receiving ephemeral stream (Seep Confluence) daily on from September 1-3, 2020, and weekly thereafter, and after qualifying rain events.

Sediment sampling was also performed by EPS at 12 locations (SD-1 through SD-12) on August 16, 2020. A second sediment sample was collected at SD-6 on August 19, 2020 to validate the August 16, 2020 sampling results. Sediment sample locations SD-1 thorough SD-12 were paired with surface water samples SW-1 through SW-12 (**Appendix D - Figure 1**).

Surface water and sediment samples were collected in laboratory supplied bottleware, placed on ice, and transported, via standard chain-of-custody protocol, to Pace of Huntersville, North Carolina. Samples were analyzed for the presence of benzene, toluene, ethylbenzene, xylenes (collectively known as BTEX) by EPA Method 8260D, and total petroleum hydrocarbons (TPH) gasoline range organics (GRO) by EPA Method 8015C. All surface water samples collected to date have been non-detect for the constituents analyzed. With the exception of a toluene detection at SD-6 of 8.2 micrograms per kilogram (ug/kg), all sediment samples collected to date have also been non-detect for the constituents analyzed. The detection at SD-6 was below the EPA Region 4 Ecological Screening Values for toluene. Sediment sampling location SD-6 was resampled on August 19, 2020 to validate the August 16, 2020 results. The August 19, 2020 SD-6 sample results were non-detect for all constituents analyzed, including toluene. A surface water and sediment sample locations map, surface water sampling results, general surface water parameter measurements, and sediment sampling results are summarized in **Appendix D - Figure 1**, and **Table 1** through **Table 3**, respectively. Copies of laboratory analytical reports are provided in **Appendix B**.

8.0 GROUNDWATER INVESTIGATION ACTIVITIES AND RESULTS

A geophysical survey was performed between August 26, 2020 and September 24, 2020 to map the bedrock surface contours, identify potential bedrock fractures and major groundwater path flows within the groundwater investigation area, and to guide placement of monitoring and recovery wells.

Between August 27, 2020 and October 4, 2020, a total of 60 monitoring wells were installed within and along the presumed outer perimeter of the release source area. Monitoring wells were installed utilizing hollow stem auger drilling methods by S&ME, Inc. and utilizing sonic drilling methods by Walker-Hill Environmental and Cascade Drilling LP. Boring logs and Well Construction Records are provided as **Appendix C**.

Well development was performed to evacuate any potable water and sediment introduced during the well drilling and installation process. Monitoring well development was performed in wells with adequate recharge by lowering a decontaminated submersible pump into the screen interval of the well, surging the pump to bring sediment into suspension and pumping several well volumes until the purge water was generally free of sediment. In cases where the water column or recharge rate within a well were insufficient to facilitate monitoring well development, the well was jetted with potable water through a tremie pipe to evacuate sediment. Jetting was continued until the return water was generally free from suspended sediment. The well was then further developed with a submersible pump as described above.

Each monitoring well was sampled once or more between August 28, 2020 and October 8, 2020. Prior to collecting groundwater samples, each monitoring well was purged of three water column volumes using a new high-density polyethylene bailer or a decontaminated stainless steel submersible pump. If a monitoring well went dry during the purging process, the monitoring well was subsequently sampled after adequate recharge. Field water quality measurements were recorded for pH, temperature, conductivity, dissolved oxygen, and oxidation reduction potential using a calibrated water quality meter. Water quality parameters were recorded in accordance with NCDEQ guidelines. Groundwater samples were collected in laboratory supplied bottleware, placed on ice, and transported, via standard chain-of-custody protocol, to Pace. Samples were analyzed for the presence of VOCs by EPA Method 6200, ethylene dibromide by EPA Method 504.1 (initial samples only), VPH by the MADEP Method, and lead by EPA method 6010D. Groundwater sampling logs are provided in **Appendix E**.

Analytical results are summarized in **Table 6** and copies of the laboratory reports are provided in **Appendix B**.

Nine rounds of water supply well sampling were completed by APEX between August 15, 2020 and October 15, 2020 on a weekly basis. Sampling commenced once access for water supply well sampling was granted by the well owner. Water supply well samples were collected in laboratory supplied bottleware, placed on ice, and transported, via standard chain-of-custody protocol, to Pace. Samples were analyzed for the presence of VOCs by EPA Method 6200, VPH by the MADEP Method, and lead by EPA method 6010D.

At the time of this submittal, there have been no detections of petroleum constituents above laboratory reporting limits. In accordance with NCDEQ guidance, and based on current data, CPC will continue sampling residential water supply wells within 1,500 feet of the release area.

9.0 WATER SUPPLY WELL ABANDONMENT AND PUBLIC WATER SERVICE CONNECTIONS

Access to abandon the water supply well (WSW) located at 14108 Huntersville-Concord Road was received from the property owner and a permit to abandon the WSW was issued by Mecklenburg County Health Department. The existing submersible pump was removed from the well on September 9, 2020 and the WSW was disinfected with 15 ounces of chlorine. On September 10, 2020, AECOM oversaw the abandonment of the WSW located at 14108 Huntersville-Concord Road by a North Carolina licensed driller using bentonite chips. The well abandonment records are included as **Appendix F**.

10.0 CONCLUSIONS

A gasoline release was discovered at approximately 18:20 on August 14, 2020. The release source area is approximately 350 feet northeast of where the CPC pipelines cross SR 2448. CPC immediately mobilized internal and emergency response contractor resources to the Site, and established an Incident Command Post to support the response activities. Line excavation and inspection activities confirmed the release was gasoline product from CPC's Line 1 at approximately 24:00 on August 14, 2020. Gasoline free product recovery efforts were initiated immediately after the release was controlled. Notifications were made to Mecklenburg County, the EPA, the NCDEQ, and the PHMSA within the required notification time periods. Approximately 90,930 gallons of free product were recovered at the release source location during initial response activities, thereby mitigating the release into the subsurface. Surface water sampling and WSW sampling commenced on August 15, 2020 and have been performed on a routine basis. To date, petroleum constituents attributed to the 2020-L1-SR2448 release have not been detected in surface water and WSW samples. A total of 100 wells (60 monitoring wells and 40 recovery wells) were installed at the Site between August 27, 2020 and October 6, 2020. Monitoring well sampling activities will continue at the interval prescribed by NCDEQ. CPC recovered approximately 90,930 gallons of free product from the release source location during initial response activities, and an additional 240,379 gallons of free product from the recovery well network and free product recovery systems as of October 24, 2020. As per NCDEQ's Notice dated September 25, 2020, groundwater monitoring reports will be submitted to the NCDEQ Mooresville Regional Office on the 30th of each month until that schedule is revised. A Comprehensive Site Assessment Report meeting the requirements of the most recent version of the UST Section Guidelines for Assessment for Non-UST Releases, will be submitted to the NCDEQ Mooresville Regional Office, the Mecklenburg County Public Health Director and the Manager for the Town of Huntersville, North Carolina by January 20, 2021.

Apparent Free Product Thickness Contour (Dashed where Inferred)
Recovery Well
Monitoring Well

NOTE:
Free Product Thickness determined from thickness in wells only;
All gauging measurements taken October 19, 2020;
The average of apparent LNAPL thickness used for side-by-side wells MW-24/RW-34;
All monitoring wells not shown were also used in contouring;
Contours created using ArcGIS Spatial Analyst IDW interpolation method.

Notes:
Only detected constituents are shown
MSCC - Maximum Soil Contaminant Concentrations.
"<" = Indicates compound was not detected above laboratory reporting limit
NE - Not Established
NA - Not Established
Bold values indicate detectable levels
Shaded values indicate compound exceeded MSCC Standard
µg/kg - Microgram per kilogram

Notes:
Only detected constituents shown
MSCC - Maximum Soil Contaminant Concentrations
"<" = Indicates compound was not detected above laboratory reporting limit
NE - Not Established
NA - Not Established
Bold values indicate compound was detected above laboratory reporting limit
Shaded values indicate compound exceeded MSCC Standard
MADEP - Massachusetts Department of Environmental Protection; as required by North Carolina Department of Environmental Quality
mg/kg - Milligrams per kilogram

Notes:

ft btoc = Feet Below Top of Casing

N/A = Not Applicable

RW = Recovery Well

ND - Not Detected

[1] = Elevations surveyed in feet using the NAVD88 vertical datum.

[2] = Corrected Groundwater Elevation = Top of Casing - Depth to Water + Free Product Thickness x 0.72

Table 5
Summary of Monitoring Well Gauging Data

Colonial Pipeline Company
2020-L1-SR2448 Incident
Huntersville, North Carolina

Well ID	Top Of Casing Elevation[1]	Date	Depth to Free Product (ft btoc)	Depth to Groundwater (ft btoc)	Free Product Thickness	Groundwater Elevation[2] (ft btoc)
MW-60	726.76	10/8/2020	ND	33.60	N/A	693.16
MW-60	726.76	10/19/2020	ND	33.62	N/A	693.14

Notes:

ft btoc = Feet Below Top of Casing

N/A = Not Applicable

MW = Monitoring Well

ND = Not Detected

NM = Not Measured

[1] = Elevations surveyed in feet using the NAVD88 vertical datum.

[2]= Corrected Groundwater Elevation = Top of Casing - Depth to Water + Free Product Thickness x 0.72

* = Initial monitoring well Top Of Casing surveyed prior to final well completion.

** = MW-23 re-installed; re-survey pending.

Notes:
All data was collected and provided by AECOM
Only detected constituents are shown
NA - Not Analyzed
N/A - Not Applicable
NE - Not Established
All units reported in micrograms per liter (µg/L)
NCAC 2L Standard - North Carolina 15A NCAC 2L Groundwater Standard
"<" - Indicates compound was not detected above laboratory reporting limit
VOCs - Volatile Organic Compounds analyzed by Method SM 6200B
MADEP - Massachusetts Department of Environmental Protection; as required by North Carolina Department of Environmental Quality
VPH - Volatile Petroleum Hydrocarbon
Bold values indicate compound was detected above laboratory reporting limit
Shaded values indicate compound exceeded NCAC 2L Standard

Notes:
NA - Not Analyzed
N/A - Not Applicable
NE - Not Established
All units reported in micrograms per liter (µg/L).
Only detected consituents are shown.
NCAC 2L Standard - North Carolina 15A NCAC 2L Groundwater Standard
"<" - Indicates compound was not detected above laboratory reporting limit
Lead - Analyzed by Method 6010D
VOCs - Volatile Organic Compounds, analyzed by Method SM 6200B
No Volatile Petroleum Hydrocarbons detected.
Samples beginning with "FD", "Field_Duplicate" and "DUP" are field duplicates and co-samples of the preceeding row.
Shading indicates a detection greater than the NCAC 2L Groundwater Standard.
Bold text indicates a detection greater than the laboratory reporting limit.
* = Inactive or Non-potable Use well

August 31, 2020

Andrew Wreschnig
AECOM
6000 Fairview Road
Suite 200
Charlotte, NC 28210

RE: Project: Colonial Pipeline (8/28 GW)
Pace Project No.: 92493062

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on August 28, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski

QUALIFIERS

Project: Colonial Pipeline (8/28 GW)
Pace Project No.: 92493062

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
R1	RPD value was outside control limits.

RE: Project: Colonial Pipeline (9/2 GW)
Pace Project No.: 92493708

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 02, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/2 GW)
Pace Project No.: 92493708

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/3 GW)-Revised Report
Pace Project No.: 92493864

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 03, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/3 GW)-Revised Report
Pace Project No.: 92493864

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/3 GW)
Pace Project No.: 92494322

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 03, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/3 GW)
Pace Project No.: 92494322

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/9 GW)
Pace Project No.: 92494640

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 09, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/9 GW)
Pace Project No.: 92494640

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/10 GW)
Pace Project No.: 92494864

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 10, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/10 GW)
Pace Project No.: 92494864

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/9 GW)
Pace Project No.: 92494923

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 09, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski

QUALIFIERS

Project: Colonial Pipeline (9/9 GW)
Pace Project No.: 92494923

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/11 GW)
Pace Project No.: 92495100

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/11 GW)
Pace Project No.: 92495100

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/11 GW)
Pace Project No.: 92495103

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/11 GW)
Pace Project No.: 92495103

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

RE: Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495239

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 14, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495239

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495241

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 14, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495241

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495244

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 14, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/13 GW)
Pace Project No.: 92495244

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495624

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 15, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495624

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495626

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 15, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495626

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495627

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 15, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/15 GW)
Pace Project No.: 92495627

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: Colonial Pipeline (9/16 GW)
Pace Project No.: 92495905

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski

QUALIFIERS

Project: Colonial Pipeline (9/16 GW)
Pace Project No.: 92495905

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: Colonial Pipeline (9/16 GW)
Pace Project No.: 92495906

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski

QUALIFIERS

Project: Colonial Pipeline (9/16 GW)
Pace Project No.: 92495906

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: Colonial Pipeline (9/16 GW)
Pace Project No.: 92495907

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

BC	The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: Colonial Pipeline (9/18 GW)
Pace Project No.: 92496397

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 18, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/18 GW)
Pace Project No.: 92496397

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Colonial Pipeline (9/20 GW)
Pace Project No.: 92496816

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 22, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/20 GW)
Pace Project No.: 92496816

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
R1	RPD value was outside control limits.

RE: Project: Colonial Pipeline (9/22 GW)
Pace Project No.: 92496817

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 22, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski

QUALIFIERS

Project: Colonial Pipeline (9/22 GW)
Pace Project No.: 92496817

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
R1	RPD value was outside control limits.

RE: Project: Colonial Pipeline (9/22 GW)
Pace Project No.: 92497017

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 23, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com

QUALIFIERS

Project: Colonial Pipeline (9/22 GW)
Pace Project No.: 92497017

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Colonial Pipeline (9/28 GW)
Pace Project No.: 92497774

Dear Andrew Wreschnig:

Enclosed are the analytical results for sample(s) received by the laboratory on September 29, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole Gasiorowski
nicole.gasiorowski@pacelabs.com
