1.0 EXECUTIVE SUMMARY / PROJECT ABSTRACT

The North Carolina Ecosystem Enhancement Program (EEP) restored, enhanced, and preserved wetlands and restored a headwater wetland valley, which is analogous to a stream in this setting at the UT Pembroke Site in Chowan County, North Carolina. The 59 acre site is located within the USGS 8-digit HUC 03010205 of the Pasquotank River Basin. These assets and their acreage totals were revised by the EEP during the summer of 2009, with the revised totals reflected in Table 1 of this report. The project goals and objectives are listed below.

Goal: Modify the channelized water features, based on reference condition, with the intent to restore the sites primary wetland functions such as nutrient cycling, flood storage, and providing wildlife habitat.

Objectives:

- Improve water quality in the basin by filtering nutrients through on-site wetlands.
- Buffer flood flows downstream by increasing infiltration and storage areas.
- Design a waterway through the wetland complex with appropriate cross-section, slope, and pattern as to provide nutrient filtering, flood storage, and wildlife habitat while meeting the appropriate success criteria for the wetland.
- Improve terrestrial and aquatic habitat diversity.
- Establish a contiguous buffer along the project that can serve as a migration corridor for local fauna.

The restored wetlands and headwater wetland valley were planted with one of three different planting zones, each with various species of bare root trees and shrubs. Following the CVS-EEP protocol, sixteen vegetation monitoring plots were established during the baseline data collection immediately after the site was planted. Plot number 14 was damaged during road maintenance and reset in the same location during the second year of monitoring. The second year of monitoring found a site average of 240 planted stems/acre, with nine of the sixteen vegetation monitoring plots having planted stem densities less than the success criteria of 260 stems/acre. Low planted stem densities were also found during the first year of monitoring, but due to the large amount of volunteer woody stems found in the plots, it is likely that volunteer vegetation will successfully vegetate the site throughout the monitoring period. The site's average stem density including volunteers is 1,184 stems/acre, with only four of the sixteen vegetation plots having densities less than 260 stems/acre. The only exotic species identified at the site are parrotfeather (*Myriophyllum aquaticum*), which is present in areas of open standing water, honeysuckle (*Lonicera japonica*), which is scattered throughout the site, and privet (*Ligustrum sinense*), which is predominantly found in the enhancement wetland. Some parts of the site have large cattail (*Typha latifolia*) populations, which may outcompete desirable vegetation and become problematic.

The restored headwater wetland valley is stable. In the parts of the site where there are large areas of standing water the feature becomes less visually defined, but there is still active flow of water across the site. In June 2009, KCI and EEP staff cut two 1.5' wide notches in the top log of the grade transition structure and one notch in the second log. These notches are approximately 6" deep and intended to lower the elevation of the standing water across the site and increase the rate of drainage when there are large rain events. During the December site walk, these notches were being accessed as the water flowed over the grade transition structure and through the notches.

Fifteen groundwater monitoring wells have been established to monitor wetland hydrology. Of these wells, five (4, 5, 6, 9, and 13) were installed in restored wetlands, two (2 and 3) were installed in enhanced wetlands, five (7, 8, 10, 11, and 15) were installed in the headwater wetland valley, and two (12 and 16) were installed in the preserved wetlands as reference wells. A new monitoring well, Monitoring Well 17, was installed in the restored wetland in April 2009. During the site's second growing season 11 of the 14 wells in the restoration areas met the success criteria of having saturated soil conditions occurring within 12 inches of the ground surface for a minimum continuous period of 5% (13 days) of the

263 day growing season (March 10 to November 28) during average climatic conditions. The daily rainfall data obtained from a local weather station shows that the area had average rainfall during the 2009 growing season. The wells that did not meet the success criteria (Wells 2, 3, and 4) each had water above the jurisdictional depth for a maximum of four days. Monitoring Wells 2 and 3 are in the enhanced wetland and Well 4 is in the restored non-riparian wetland. Monitoring Well 4 experienced malfunctions in September and October of 2009, which resulted in lost data for the rest of the growing season. There is the possibility that this well could have met the hydrology success criteria after the large rain event on November 12th, but this is unlikely considering that the other two wells that failed to meet the success criteria did not meet the criteria after this rain event.

Summary information/data related to the occurrence of items such as beaver or encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in these reports can be found in the mitigation and restoration plan documents available on the EEPs website. All raw data supporting the tables and figures in the appendices are available upon request.

2.0 METHODOLOGY

The Level 2 of the CVS-EEP protocol (<http://cvs.bio.unc.edu/methods.htm>) was used to collect vegetation data from the UT Pembroke site.

WELL #1

CROSS SECTION

The figure is a site map with the following key features:

- MONITORING WELL #16**: Located at the top center, marked with a green cross icon.
- MONITORING WELL #15**: Located below and to the left of Well #16, marked with a green circle icon.
- MONITORING WELL #13**: Located at the bottom right, marked with a green circle icon.
- VEGETATION PLOT #15**: A rectangular area outlined in green, located between Monitoring Wells #15 and #13.
- VEGETATION**: Labeled "VEGETATION" in large letters at the bottom center.
- PHOTO POINTS**: Several points marked with red circles and arrows pointing to specific locations on the site boundary or terrain:
 - PHOTO POINT 10**: Located near the top right, indicated by a red circle with an arrow.
 - PHOTO POINT 11**: Located on the far right, indicated by a red circle with an arrow.
 - PHOTO POINT 9**: Located in the center-right area, indicated by a red circle with an arrow.
 - PHOTO POINT 8**: Located on the left side, indicated by a red circle with an arrow.
- Contour Lines**: Dashed black lines representing elevation levels across the site.
- Scale Bar**: A scale bar labeled "0+00" is located in the lower-left quadrant.

NOTE:
GREEN MONITORING WELLS AND VEG
PLOTS HAVE MET THEIR SUCCESS
CRITERIA FOR MONITORING YEAR 02,
RED WELLS AND VEG PLOTS HAVE NOT.

12/02/2009

Photo Point 5 – 12/2/09 - MY 02 – Road Crossing Type A – Station 50+75 – Facing west toward Macedonia Road.

12/02/2009

Photo Point 6 – 12/2/09 - MY 02 –Facing northwest toward Macedonia Road.

Photo Point 7 – 12/2/09 - MY 02 – Facing south.

Photo Point 8 – 12/2/09 - MY 02 – Road Crossing Type B – Station 30+50

Photo Point 9 – 12/2/09 - MY 02 – Road Crossing Type C – Station 32+50

Photo Point 10 – 12/2/09 - MY 02 – Grade transition, facing downstream.

Photo Point 11 – 12/2/09 - MY 02 – Grade transition, facing upstream.

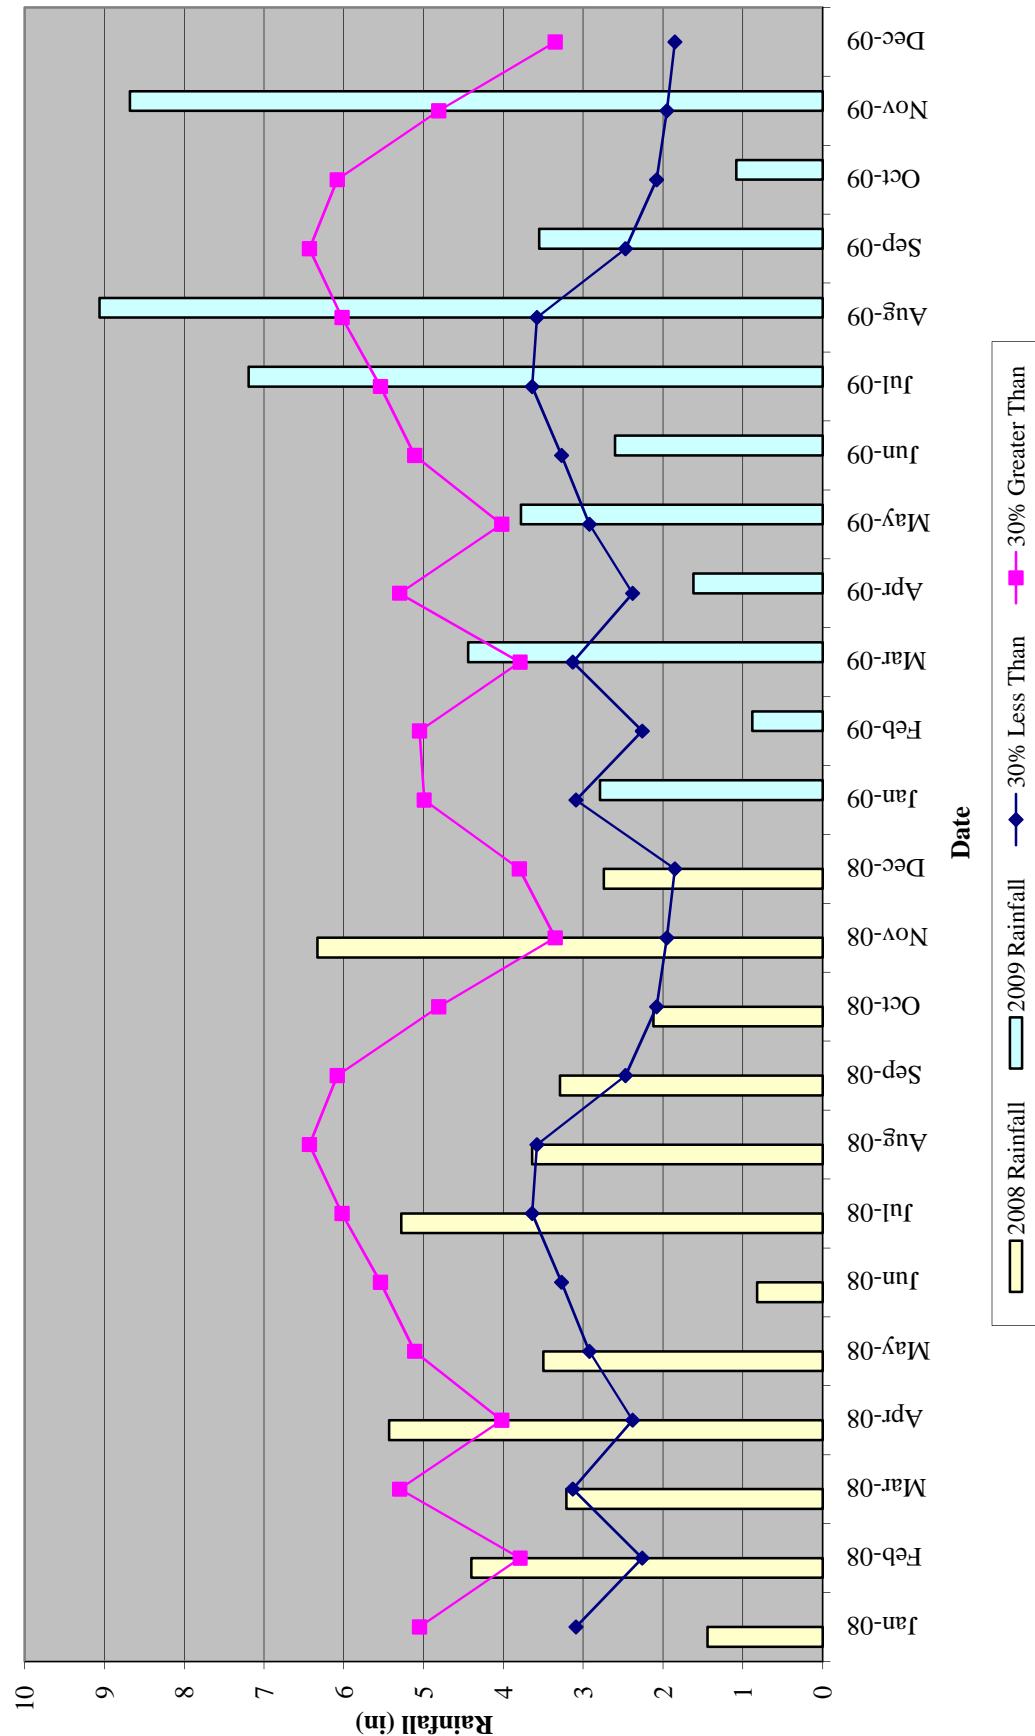

Maintenance Photo – 12/2/09 - MY 02 – Water flowing through notch in second log of grade transition.

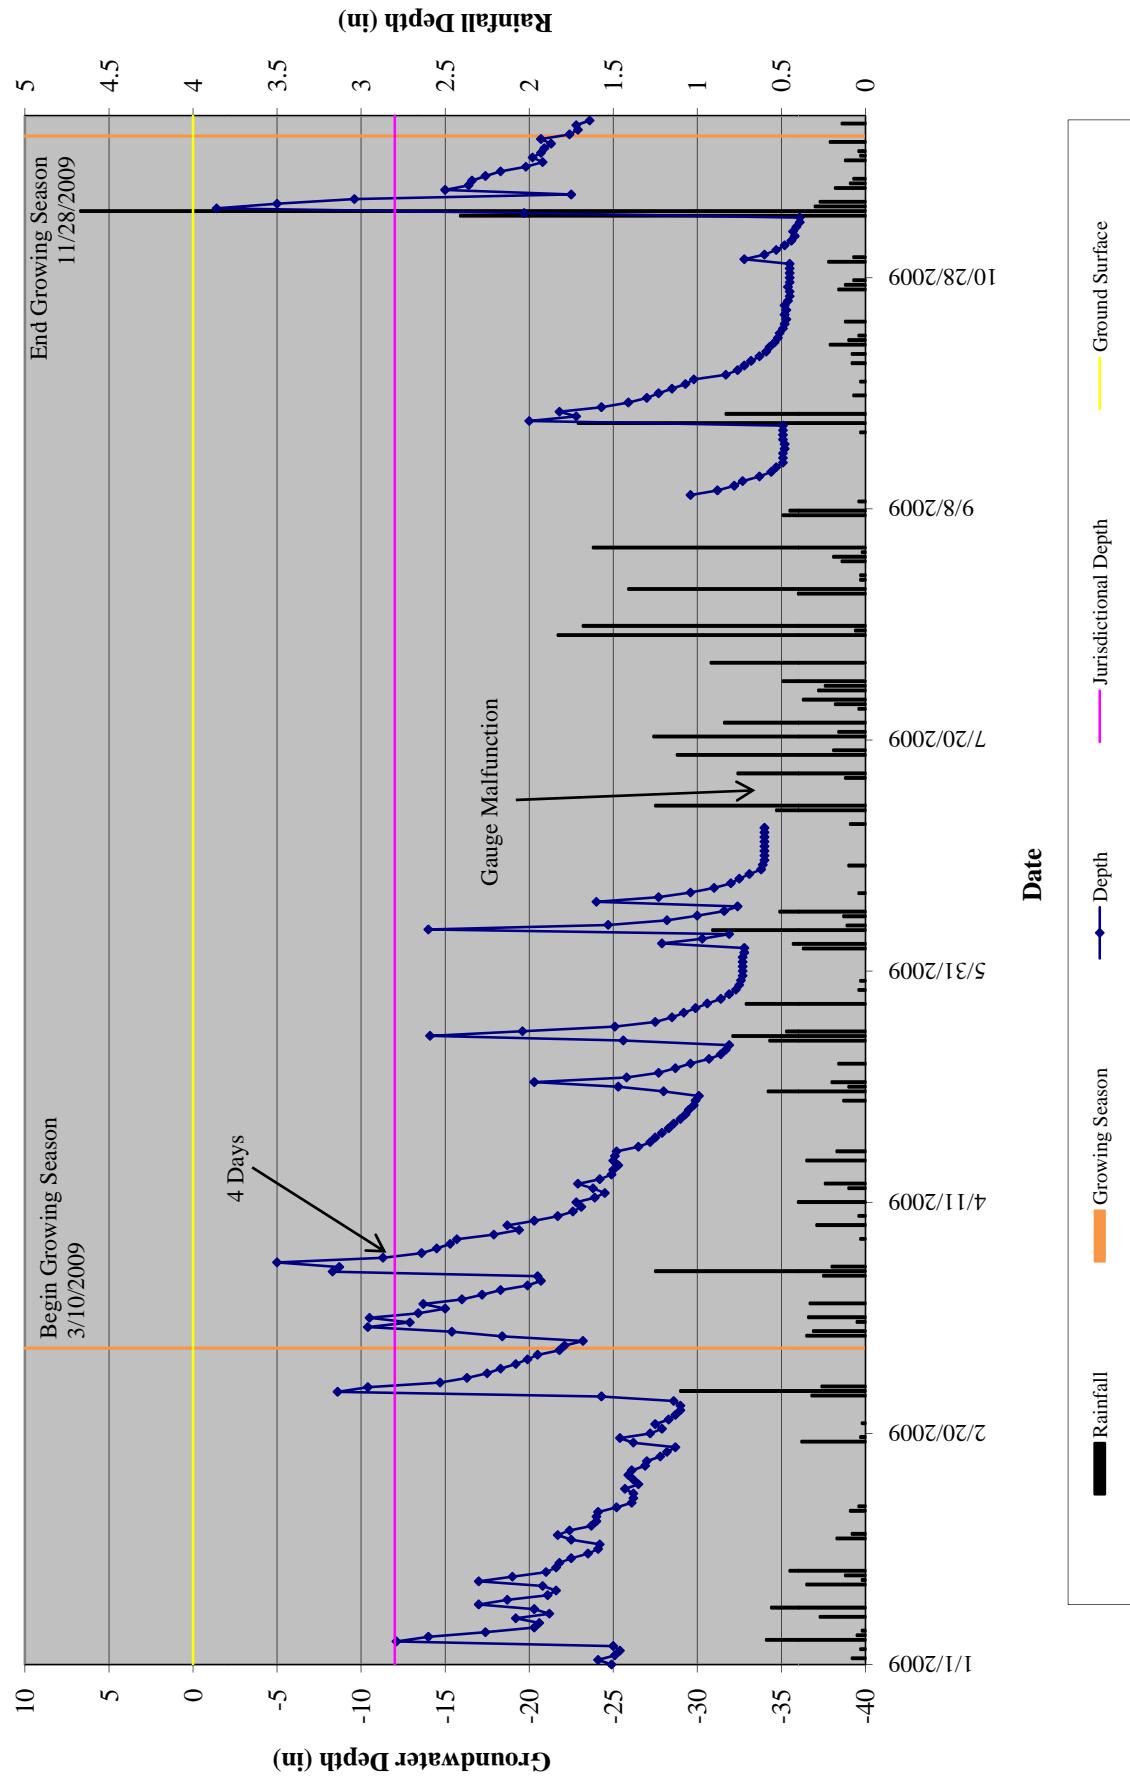

Table 8. Wetland Hydrology Criteria Attainment Table
Project Number and Name: 283 - UT Pembroke

Gauge	Success Criteria Achieved / Max Consecutive Days During Growing Season (Percentage)	
	Year 1 (2008)	Year 2 (2009)
Well 2	No/0 (0%)	No/4 (1.5%)
Well 3	No/0 (0%)	No/4 (1.5%)
Well 4	No/0 (0%)	No/4 (1.5%)
Well 5	No/11 (4.2%)	Yes/49 (18.6%)
Well 6	No/12 (4.6%)	Yes/46 (17.5%)
Well 7	Yes/87 (33.1%)	Yes/108 (41.1%)
Well 8	No/11 (4.8%)	Yes/45 (17.1%)
Well 9	Yes/51 (19.4%)	Yes/49 (18.6%)
Well 10	Yes/207 (78.7%)	Yes/110 (41.8%)
Well 11	Yes/107 (40.7%)	Yes/263 (100%)
Well 12 <i>Reference</i>	Yes/77 (29.3%)	Yes/53 (20.2%)
Well 13	No/10 (3.8%)	Yes/31 (11.8%)
Well 15	Yes/174 (66.2%)	Yes/107 (40.7%)
Well 16 <i>Reference</i>	Yes/112 (43%)	Yes/87 (33.1%)
Well 17	N/A	Yes/108 (41.1%)
