Public Notice Quick Reference Guide – Additional Lead Specific Notices

Notice Type	What Situations Require Notification?	Timing of Notification	Delivery Method	How Should the Notices be Submitted to the State?
Consumer Notice of Lead Tap Water Results 15A NCAC 18C .1507 [141.85(d)] 	Whenever lead tap sampling is conducted, notice of the individual tap results from the monitoring must be provided to the persons served by the water system at the specific sampling site from which the sample was taken (e.g., the occupants of the residence where the tap was tested.).	A water system must provide the consumer notice as soon as practical, but no later than 30 days after system learns of the tap monitoring results.	The consumer notice must be provided to persons served at the tap that was tested, either by mail or by another method approved by the State. Community systems can provide notice by mail and need to include notice to those who do not receive a water bill but still use the water from the sampling site. Non-transient, non-community systems can post the notice to allow consumers to review the information. Where testing occurs in buildings with many units (e.g., an apartment building) the notification must be provided to each individual unit that was tested (i.e., notification does not need to extend to the entire building).	<div>  <p>Submit and certify through the LCN module in ECERT.</p> </div> <p>Consumer Notices must be submitted with certification no later than 3 months after the end of the monitoring period.</p> <p>If you do not have internet access, notices with signed certification can be mailed to the LCR Rule Manager.</p>
Public Education on Lead in Drinking Water 15A NCAC 18C .1507 [141.85] 	When more than 10 percent of the tap water samples collected in accordance with 15A NCAC 18C .1507 (141.86) exceed the action level of 15 parts per billion (ppb) during a monitoring period, the public water system must conduct a Public Education program on lead in drinking water.	Community water systems and non-transient non-community water systems must deliver Public Education (PE) within 60 days after the end of the monitoring period in which the exceedance occurred.	Specific delivery instructions, based on population and system classification, are provided on the back of the approved notice template entitled “Public Education on Lead in Drinking Water.”	<div>  <p>Submit through the PE module in ECERT.</p> </div> <p>Public Education must be submitted within 70 days after the end of the monitoring period in which the exceedance occurred.</p> <p>If you do not have internet access, documentation can be mailed to the LCR Rule Manager.</p>
Service Line Material Notice 40 CFR 141.85(e) 	When a water system has service lines that in their inventory classified as lead, galvanized requiring replacement, or unknown material, notification of the service line material must be provided to the customers at these service connections annually.	Notification must be provided within 30 days of completion of the service line inventory and annually thereafter. Notification must also be provided to new customers at the time of service initiation.	The service line notice must be provided to persons served at the service connection, either by mail or by another method approved by the State.	<div>  <p>Submit through the SLI module in ECERT. If you do not have internet access, notices with signed certification can be mailed to the LCR Rule Manager.</p> </div> <p>Service Line Material Notices must be submitted annually by July 1st for the previous calendar year.</p> <p>If you do not have internet access, notices with signed certification can be mailed to the LCR Rule Manager.</p>
