Dear Coal Ash Comment Administrator North Carolina DEQ,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Erin Malec
601 West Rosemary Street

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

When Hurricane Florence dumped 30+ inches of rain inland, hog lagoons, sewage, dead chickens, and coal ash floated downstream to pollute coastal waters. An aerial photo showed a black plume of sludge streaming out Beaufort Inlet. Keep the pollution away from Beaufort. We couldn't swim, nor let our pets in the water, and we couldn't eat seafood. DEQ should set toxic rate limits for Coal Ash at the level that really kills fish. And contain Coal Ash away from water.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ralph Warner

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. They should do this I'm mediately.

Regards,
Viv Graves

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I'll write my own statement instead of the automated response, because I'd like to highlight a few issues surrounding this, aside from the obvious.

Firstly I'd like to say that it is obscene that we 'have' to bring this up and it is not being made a mandatory task. The North Carolina Utilities Commission has disgraced itself by allowing a business to front the bill of their problems, their mishandlings, and their carelessness to its consumers. We did not tell Duke Energy not to maintain their operations. We did not ask them to confront the NCUC and demand we pay for their screwups. The only thing we have done is pay our bills accordingly. I don't understand how a company receives a tax break greater than the suggested amount for cleanup, and has an increase in net worths and somehow our gatekeepers at the NCUC believes we should front the bill. Its ridiculous. Now, they still have multiple sites that are under question and we 'have' to make a big deal out of this instead of it being mandatory. What is everyone going to do? Wait until we have another major contamination, and once again just front the bill to the people not responsible? How much more does the public have to pay for a million dollar companies' mishandlings? DEQ members, don't be another let down to this state, we've already been shown disappointment once from the NCUC, we don't need another group following suit.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Dennis Laws
178 Pleasant View Dr
Bostic, NC 28018

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Remove and safely store all coal ash from all sites at the expense of Duke Energy and not consumers.

Regards,
Gary Clontz
79 Vista Dr
Clyde, NC 28721

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I request that Duke remove the coal ash from the Marshall Steam Plant along with the other locations that they are currently operating! It is horrible that they have been allowed to pollute our beautiful waterways and land for decades!!! If the North Carolina State cares at all about it's citizens it will get Duke to clean up the mess!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Tricia Altic

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Laura Gottlieb

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

Living in one of the coves that the coal ash / sediment has spread into. It's extremely important to me and my family that this gets cleaned up. I also feel that the our county knows more than what they have to done to protect us. We have supporting evidence that NCDEQ, DEQ and Iredell County has let things slip through the cracks.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I went to the first meeting tonight at Walnut Cove Elementary. The meeting design was not conducive for citizens to be heard. The poster set up did not encourage dialogue and I was not able to speak to any of the experts at each poster. My voice was not heard. I hope DEQ and NC will hear this email loud and clear.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I attended the session tonight at Walnut Cove. I was tremendously disappointed in the format as no one other than the presenter had an opportunity to speak or provide input. The format for the other sessions should be changed to give those who attend an opportunity to speak.

I have studied the coal ash issue, and I strongly feel that the North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Currently, Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not cover-up!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

We moved here from Ohio for a better quality of life for our children, we need to live in a safe, clean environment and it is Duke Energy's responsibility to provide that in the area that so many of us live in around their plants and on the Lake. It is crazy to me to even fathom that a company would not clean up their toxic mess that they have created. Where is the conscience and accountability? I pray that you hear the pleas of the community and rectify this.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Gene Cook

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Naomi Williams

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Renee Reynolds
131 Flat Creek Church Road, Weaverville, NC, United States,

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater!

We moved to Mooresville just over 3 years ago and had no idea about the environmental conditions here! Since then we have watched friends and countless community members become unexplainably sick - some teenagers and younger! Our rates of cancer in this area are higher than “average.” This is not a coincidence!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we’re concerned about pollution from Duke Energy’s coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please DO SOMETHING to help our community and keep us safe!!

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
David Reynolds

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mrs. Cathy Nieman

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mrs Michelle Pena-Ortiz

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mrs. Kim Porter
26 Twin Hills Dr Weaverville, NC 28787-9498

North Carolinians deserve better. Require Duke Energy to comply with the law and protect water quality.

As a North Carolina citizen, I would like to make it clear that Duke Energy CHOOSE to use unlined coal ash pits.

As a tax payer, I have no interest in paying additional fees to assist them in cleaning up the mess they made. Nor do I support a rate increase to Duke customers to cover the cost of cleaning up the mess they made.

Thank you for your consideration.

Sincerely,

Ms Dawn McMahan

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
William Ball

Dear Cliffside Closure Hearing Comments NC DEQ,

My wife and I lived in the Piedmont of NC, near Eden NC for many years. We very much enjoyed the area and the activities around/in the Dan River basin. After the coal ash spill, of which nearly 80 MILLION gallons were introduced to the Dan, this area is no longer suitable for swimming, fishing, or even basic enjoyment of the watershed. There were signs of the pending issue for many years and the local inhabitants of Rockingham County tried without success, to get Duke to be proactive. Don't let this happen in WNC.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. D. Rex Miller
268 Appalachian Dr Boone, NC 28607-4305

Dear Cliffside Closure Hearing Comments NC DEQ,

It's the ethical action to take to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is too long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, a severe violation of federal and state rules. Cap in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years! North Carolinians deserve so much better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Dear Cliffside Closure Hearing Comments NC DEQ,

In this day and time, it is unbelievable that moving Duke's coal ash to a lined pit would be the lesst bit contentious. Duke should want to take immediate action to move the coal ash because it is the right thing to do so as not to keep polluting the Broad River.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
DeVonne Duncanson

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Pamela McNally

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jeannie Whyte

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Aiden Kenny
812 Chestnut St
Wilmington, NC 28401

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. Lee Reading

Dear Cliffside Closure Hearing Comments NC DEQ,

The Summer of 2016 I was accepted in a program through Brevard College called Voices of the River, an 6 credit hour link course. During this 21 day expedition we hiked to the headwaters of the Broad River on Bearwallow Mountain, paddled the boundary of Lake Lure (once the river itself before damed), and then paddled the entire Broad River watershed to the coast of Charleston. A total of 311 miles of expediton paddling, where we passed Cliffside and the Duke Plant while witnessing on the river the toxic coal ash blatantly on the surface of the water. It's a shame that Duke Energy thinks it is acceptable to get away with not managing on site resources, along with violating protection of water quality.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

Coal ash contains toxic elements that will eventually leak into the groundwater here and even in lined pits eventually. It needs to be removed and incinerated and then used in concrete to cut pollution.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. Please don't bow to the pressure of Duke's massive political influence. As regulators, you should act independent of politics and use common sense when enforcing the laws. There is no common sense that say Duke should be allowed to continue polluting our drinking water if they can afford to move the coal ash.

Regards,
Alexander Mullineaux

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Judith Williams

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Eura tunstall

CAUTION: External email. Do not click links or open attachments unless you verified. Send all suspicious email as an attachment to report.spam@nc.gov

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I am a resident of Mooresville, NC on Lake Norman. I currently serve on the Board of Directors of the Catawba Riverkeeper Foundation (CRF) and served for several years recently as the Board Chairperson. CRF is submitting its own comments; these are my own.

For the bulk of my career I was on the corporate headquarters staff of Northeast Utilities, so I am not your typical anti-utility environmentalist and I brought that balanced perspective to CRF. I've always felt that Duke Energy was a well-run company and have never given a second thought to the fact that our house is less than 6 miles from Duke's McGuire Nuclear Power Plant.

But we do have to wonder why Duke would advocate leaving its unlined, ground/surface water-polluting coal ash dump at its Marshall coal-burning plant on the banks of Lake Norman. True, they propose capping it with an impermeable layer that would theoretically prevent water from leaching toxic chemicals from the coal ash into nearby waters. That's a risky proposition particularly given the use of Lake Norman and numerous points downstream on the Catawba River and its impoundments for drinking water, including the City of Charlotte.

Let's not forget that it wasn't that long ago that Duke experienced a major fiasco at its Dan River coal-burning plant. There the collapse of a 48" drain pipe underneath the coal ash dump resulted in 39,000 tons of coal ash and 27 million gallons of polluted ash pond water flowing into the Dan River. This was the third largest coal ash incident in the US and resulted in fines and restitution of \$102 million after Duke pled guilty to nine charges of criminal negligence under the Federal Clean Water Act, the largest federal criminal fine in North Carolina history.

So, Duke has a less than stellar track record dealing with coal ash.

Duke is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. Yet, over the course of recent months Duke has suggested that its so-called cap-in-place solution at Marshall would alleviate the need to overcrowd Rt. 150 and other roads with a never-ending caravan of dump truck loads of coal ash headed to a proper geologic location and a modern engineered landfill. I suspect that nearby residents would much prefer to endure the traffic inconvenience than continuing water pollution from coal ash at Marshall or, worse yet, another Dan River fiasco. By the way why not move the coal ash out the same way the coal comes in...by rail?

Incidentally, Duke prides itself on recycling coal ash at other sites into environmentally harmless cementitious building products. Shouldn't at least partial recycling of coal ash at Marshall be pursued?

It's pretty clear why Duke wants to cap-in-place at Marshall...because it's the least costly option. That might be good for Duke ratepayers and shareholders, but not for the protection of water resources of the many communities around Lake Norman and downstream, including Charlotte drinking water customers.

If Duke doesn't offer to do the right thing the North Carolina Department of Environmental Quality (DEQ) should require Duke to either recycle or remove its coal ash from its leaking, unlined dumps on the banks of Lake Norman and move it to dry lined properly engineered storage at a suitable geologic location isolated from irreplaceable ground/surface water resources.

Respectfully submitted,
Ron Pfeffer

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Melissa Engler

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

AS a Resident on Mayo Lake since 1990 when my parents built the house I live in now, we have enjoyed the recreational fishing, swimming and boating that the beautiful lake offers. My family and friends have visited the cove where the overflow creek dumps its coal ash tainted waters. We did NOT know exactly what we were looking at for years, only noticing that the cove near the plant had a milky tint to it and curious plant growth. As Google Earth evolved, I was able to see where the outflow was actually generated,,,,, the coal ash collection pond! You can see for yourself where the Ash Pond flows out into the cove I mention. The other interesting satallite image of 12/2002 shows clearly the milky water tint in the cove. I certainly fear for the danger I have subjected my children, family and friends to as I look at this image. I do hope that this plant and Coal ash are shut down and cleaned up as soon as possible to prevent further damage to this incredible resource. I just hope it isn't too late.

Please see the Google Earth Shot above from the Mayo Plant and note the cove I mention. You can clearly see the milky tinted water coming from the creek on the other side of the tracks where the Ash Pond is located.

Look at it for Yourself on Google Earth and be sure to drag the date bar to 2002.

(I can't attach the screen shot of Google Earth showing the cove with the date stamp 12/2002. I will try again to send to you so you can see clearly.)

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Cliffside Closure Hearing Comments NC DEQ,

The NC DEQ will be negligent if they don't make Duke move the coal ash at Cliffside (James E. Rogers Energy Complex) to the lined landfill. The DEQ will not be doing their job to protect the citizens of North Carolina from environmental hazards if the coal ash isn't moved away from the river.

I thank you for your consideration.

Sincerely,
Mr. Burwell Byers
729 Rabbit Rdg Rutherfordton, NC 28139-8382

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Sandra Chasey
4843 Flat Springs Rd

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Virginia Hillyer
4971 S Turner Rd
Canfield, OH 44406

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
De. Michael Whitmire

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

When Duke Power Co. started spreading coal ash around the Marshall Steam Station decades ago, the land used had numerous creeks, gullies, and drainage channels all leading into the Catawba River, which became Lake Norman after construction of the Cowans Ford Dam. Now that topography is nothing but a level forested woodland, with layer upon layer of coal ash obliterating the original landscape. But the water percolating through the ash layers still follows the old paths, only now laden with a toxic stew of heavy metals and other pollutants, all seeping slowly into Lake Norman. Duke Energy is slowly poisoning the lake and the groundwater, silently and stealthy, now and for all eternity unless the coal ash is removed.

You have a duty to protect the health and welfare of the citizens of this great state and you must compel Duke Energy to dig up the coal ash and store it in a safe location where it can do no more harm to our citizens and our environment.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Edwin Caudill
4528 Thacker Hill Dr

Dear Cliffside Closure Hearing Comments NC DEQ,

To Another Caring and Smart Citizen,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Save our children.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways.

I currently live on the beautiful shores of Lake Norman across from Marshall Station. I look at the billowing smoke everyday.

We fulfilled a lifelong dream by purchasing an old lake cabin and making it our home for us and our 3 young kids. Our kids and us fish, swim, and enjoy Lake activities all Summer. We have a well water that draws water from the natural water table around the Lake. I work and live here, I hope to retire here and pass this on to my kids.

2017 Duke had 10.8 BILLION in gross revenue, 3 BILLION NET INCOME. The CEO was paid 21.4 Million dollar Salary.

Duke Energy wants to just cap in place a leaking and potentially catastrophic accident waiting to happen unlined Coal Ash pit directly on the shores of LKN. At minimum Duke should be moving all Coal Ash adjacent to the Waters of LKN to a Lined and Capped storage that will be safe for all of us.

This really should not be up for debate. They put this cost

For moving coal as to line out at 387

Million. Nothing compared

To their Billions in profit. Even doing the right thing by removing all the coal ash to lined storage, they put cost at 1 billion. Only a fraction of 1 years profits.

Who is accountable here? Who is accountable for the damage already done? Do we wait until another Dan River happens here?

How does their right to rake in billions in profits, become

More important than the Health and well being Everyone around these toxic waste pits?

You are trading Duke profits for the Lives and Health of us and Our Children and all generations that come after!

Please make them accountable or it's on you, and you become the Failure for Now and the Future!

Thanks for reading

Dear Cliffside Closure Hearing Comments NC DEQ,

Please require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage. They already have available storage onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, in violation of federal and state rules. Capping it in place won't solve the problems; it will just hide it. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians and future generations deserve better. To comply with the law and protect water quality, Duke must excavate its coal ash now. Small businesses across the state are required to clean up their messes, Duke should not be an exception simply because their size gives them more political clout. In fact, if anything, their size and the extent of the pollution problem they pose should make them be called upon to more strictly adhere to rules and regulations rightfully put in place to protect the environment and the people of North Carolina. We are looking to you to protect us and our children!

Thank you for your consideration.

Sincerely,
Ms Maria Chasins

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Linda Coplin

Dear Cliffside Closure Hearing Comments NC DEQ,

Please require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr James Schall

Dear Cliffside Closure Hearing Comments NC DEQ,

I am a citizen of Western North Carolina. I have been dismayed at the lack of accountability issued towards Duke Energy when it comes to coal ash. It's time for Duke Energy to be accountable for their failure of protecting citizens from coal ash.

I ask you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash to lined storage now.

Thank you for your consideration.

Sincerely,
Mx. Skylar Casey

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
KENNY DORE

The solution to the coal ash problem is removal. Capping in place is NOT a satisfactory solution.

To Whom It May Concern ,

Please , Please help us in the efforts of the right thing for the Environment and the People of Lake Norman Area and All over NC.

The fact that we are in 2019 and we know this Coal Ash is a disaster to the Environment and the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get cleaned up

We ask you to make a clear message to Duke Energy . Clean it up . Haul the waste off to a unpopulated area outside of NC . Start Now and Fines should be immediately implemented

No Coal Ash should be left in NC .

Why in the world are US Companies Importing Millions of Tons of Coal Ash from India and Shipping across the Oceans . Apparently we have more than enough in NC alone .

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Lisa Dunn
217 Stonewall Beach Ln

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Eva Humphrey

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

Listen folks,

I know y'all love North Carolina as much as I do. No two ways about it: we won the lottery just being here.

Don't you want your children to feel that way? If we pollute the water now, we're making our beloved home state into the next New Jersey or Michigan: a national joke.

Do you want postcards with fish wearing scuba gear like they got around Lake Michigan? Do you want rivers that catch fire like they got around Cleveland?

It's our responsibility to the property owners (our children) to maximize the value of the property. Anything less is gross mismanagement.

Feel free to contact me at any time if you have questions or concerns.

Sincerely,
Joshua William Booth
Property Manager
Free State of North Carolina

Dear Cliffside Closure Hearing Comments NC DEQ,

I have been swimming, canoeing, and fishing the Broad River for 30 years. The gently flowing waters are cool and clear, and moss covered rocks in the shallows are like a lush carpet under bare feet on a hot summer's afternoon. The section of river between Cliffside and the Broad River Greenway in Boiling Springs is exceptionally wide and scenic, and smallmouth fishing along this stretch is some of the best in the Southeast. Thousands of swimmers, waders, anglers and paddlers enjoy the waters of the Broad River.

However, nearby coal ash ponds are putting these traditions at risk by polluting the Broad River with toxic heavy metals like arsenic and cobalt. On January 22, our community will have a chance to speak out about this pollution and urge the Department of Environmental Quality (DEQ) to enforce a full cleanup of the coal ash. I'll be there, and I hope you will be too.

In 2011, I founded the Broad River Paddle Club in an effort to connect people interested in recreation on the water. In 2015, we formed the Broad River Alliance, a Waterkeeper Affiliate and program of MountainTrue, to continue efforts that not only promote the Broad River but protect it as well. Knowing that our love of fishing, swimming, and paddling relies on the river being uncontaminated, one of our main actions has been to push Duke Energy for a thorough cleanup of its coal ash waste in Cliffside.

The two remaining ash basins in Cliffside contain over 6 million tons of coal ash. The ash is sitting dozens of feet below the groundwater table, and Duke Energy's own reports show that toxins are leaking from the ash basins into our groundwater and surface water (streams and the Broad River). Last spring, a group of students from Appalachian State University came to the Broad River, and by collecting and analyzing fish tissue, they found that fish around the Cliffside facility have higher and potentially dangerous levels of contamination compared to the fish upstream. Just three months ago, Duke Energy measured exceedances of federal groundwater protection standards for arsenic and cobalt at Cliffside. That seems pretty risky to me.

DEQ should require Duke Energy to remove its coal ash from these leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. There is already dry lined storage in place at the Cliffside facility. However, Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater and river forever.

The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to completely excavate and safely store this toxic waste. It is long past time for DEQ and Duke Energy to listen. Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same consideration and protections.

Thank you for your consideration.
David

Sincerely,
Mr. David Caldwell

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) must require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—why not our Community!

Regards,
Elizabeth Hughes

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. S. Nam

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Melissa White

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Dear Governor Cooper and our state's Dept. of Environmental Quality:

I write as a proud Carolinian, mother, teacher, volunteer, writer and photographer to ask why our state would allow Duke Energy to continue to release its coal ash into our waters and soil. Duke is already guilty of the largest criminal fine in NC history with its third largest coal ash incident in our country. Every human knows that coal ash affects our drinking water and our recreational lands and lakes.

If the very North Carolina state department that exists to protect the health of our children and wildlife succumbs to this corporation's plea to "cap in place" its toxic waste at Marshall then I predict the word will leak out - to corporations considering relocating here and buyers/developers of waterfront real estate - that NC is becoming unhealthy to invest in. We must look ahead!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

North Carolina deserves to live. We have beauty, life, unique qualities that sustain us & fill us with pride. Our state is irreplaceable.
In short: I Love Calling North Carolina Home.

Please keep it safe for All living creatures. Our aquatic environment offshore remains (I think) undestroyed, to date. Our wildlife remain salvageable. Our trees and plants and natural wildlife still exist, mostly, in pieces, in various parts of the state.

If these wild systems are lost...they cannot be replaced. So my message is simple:
Respect Our World and its Inhabitants.
Repair what we can.
Give natural areas the peace & undisturbed balance they had before we "improved" them with modernization.
Respect Life.

Thank you.

Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!
South Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
J Bradish

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Karen Hawk

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Courtney Hastings

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. Gray Jernigan

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I am submitting comments because I believe that it is imperative that DEQ listen to ALL the communities that are impacted by the coal ash that is leaking. Every one of the sites that are to date not part of the coal ash removal need to be addressed.

Duke must NOT be permitted to leave the coal ash in place in unlined pits thus leaking toxins into the groundwater and waterways. While Duke has been required to remove coal ash from all of the sites in SC and 8 of them in NC- WHY would they not be required to remove it from these remaining sites?

I whole heartedly support the view that the unlined pits need to have the coal ash removed to dry lined storage. Waterways and groundwater are being contaminated and that is a deplorable state of affairs. DEQ- please do what is truly the right and just thing to do for all the communities that are effected by Duke's unfortunate treatment of coal ash in the past.

sincerely
Katherine Seligmann

To Whom It May Concern ,

Please help us by joining the efforts of the right thing for the Environment, the population of Lake Norman Area, and across the state of North Carolina.

The fact that it is now 2019 and we, along with Duke Energy, know this Coal Ash is a disaster not only to the Environment but also the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get it cleaned up immediately.

We ask you to send a very clear message to Duke Energy. Excavate the Coal Ash waste off of the properties and **dispose properly** in a rural area outside of North Carolina. The excavation should be started immediately and fines implemented immediately.

No Coal Ash should be left in North Carolina. No more excuses from Duke Energy!

Thanks,

Arden Drose

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Melanie Bundy
2344 Branch Hill Ln

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I am a Registered Nurse, a Girl Scout volunteer, and a mom that enjoys exploring the beautiful state of North Carolina with my family. I never imagined that I would be regularly checking the North Carolina Department of Environmental Quality (DEQ) compliance and water contamination reports to make sure the shoreline or waterway I'm about to let twelve Daisy Girl Scouts or my own children discover, is not going to harm their health.

The fourteen coal-fired power plants in North Carolina produce 19.3 billion gallons of coal ash and account for more than a third of the state's greenhouse gas emissions. Communities surrounding these power plants, as well as those downstream of coal ash ponds, are at great risk of health consequences due to air and water pollution. Poor air quality causes long-term cardiovascular and respiratory disease. Lead and arsenic, among other toxic chemicals, have polluted water ways from these coal ash ponds and put entire communities at risk for life long and life threatening disease and illness.

Duke Energy has the ability to move coal ash to dry lined storage, away from waterways and groundwater. This action has been required of them in all its South Carolina sites, as well as eight sites in North Carolina. The DEQ needs to require Duke Energy to take this action on the remaining six sites in North Carolina for the health and safety of communities across this great state.

Regards,
Shelby Gaul

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

We LIVE HERE. The pollution is so horrible as Duke Energy continues using our poor community as their dumping ground. We not only have the coal ash; we have the constant loaded down dump trucks speeding through our community, they surrounded the community with the gas line, and opened up NC 120 for all construction and 18 wheeler corporate trucks. We have written letters to Gov. Cooper and to his DOT, Duke Energy Executives. Roy Cooper is yet to respond after numerous attempts to protect our community from this violent abuse.

Just about every house hold has incidence of chronic disease and sickness.

Please stop this abuse of such poor people unable to hire attorneys. Let me know how to be a spokes person in the community so people are more informed for WHY they are sick.

Thank you for your consideration.

Sincerely,
Mrs Debora Thompson

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Hello. I attended the meeting on January 17, 2018 at Sherrill's Ford Elementary.

From the information presented there, the comments from the public, Department of Environmental Quality and the two elected officials is it clear that Duke Energy needs to remove the coal ash completely from its leaking, unlined pits. This needs to be done at not only the Duke Energy's Marshall Steam Station but at all of Duke Energy's coal ash pits throughout North Carolina and the country.

Also Duke Energy should be responsible for the entire clean-up and not allowed to pass the cost on to their customers. Duke's President and CEO, Lynn Good, makes **\$21.4 million a year**. When she originally was hired, she said that Duke's rate payers would not be responsible for the coal ash clean up cost. Perhaps she can forgo some of her enormous, over-bloated salary and apply it towards Duke's coal ash clean up. They created this entire mess.

Also in the meeting it was said that if the coal ash was moved elsewhere on the property, they would clear cut arces of land and forest. That is not necessary and once again, a poor plan of Duke Energy.

Sincerely,

Allana D'Andrea

p.s. Also as stated previously (<https://www.wral.com/editorial-consumers-shouldn-t-pay-for-duke-energy-s-coal-ash-bungles/17145391/>),

"As a regulated monopoly, Duke Energy has an obligation to produce reliable, affordable and safe power while still being guaranteed a reasonable profit for the company and its shareholders. When the company fails to meet one of the three obligations it has to its customers, it isn't the fault of the ratepayers, nor should it be their responsibility to pay."

In a March 12, 2014 letter to then Gov. Pat McCrory and the N.C. Department of Environmental Quality, Duke Energy CEO Lynn Good said, **"We have accepted responsibility for the Dan River ash discharge and have taken a number of immediate actions following the event. <https://www.justice.gov/opa/pr/duke-energy-subsiadiaries-plead-guilty-and-sentenced-pay-102-million-clean-water-act-crimes>**

A little more than a year later, as the company **pleaded guilty to nine criminal violations of the federal Clean Water Act** – four related to the Dan River spill – Good said: **"We are accountable for what happened at Dan River and have learned from this event."** " *Obviously, not!!!*

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Eliza Stokes

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

As a new resident of 3 years living on the lake within 1.5 miles of the ash ponds I go to bed every night wondering if I have brought harm to the very family that, as their father/husband have tried so hard to protect. The fear that I get when my newborn granddaughter needs to be bathed or needs water for her formula. This is their lives and have only one life to live. How can this danger be taken so lightly. Something drastic has to be done. There is a responsibility that needs to be met. I cannot protect my family from forces beyond my control. They need a voice that my own cannot afford.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

NC is a beautiful state. That's a factually accurate statement...not a biased ad. So. Of course we should keep it alive and well and treasured for the jewel it is! Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
M.L. Rhodes

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mrs. Martha Spencer

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Robert Thomson

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Christian Smith

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
DAWN MCGINTY
2809 SPRING GARDEN ST APT A

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Richard Cary

I'm at the Cramer HS hearing in Belmont. My comments are:

- 1) Duke's proposed plan is not responsive in any way to the challenge. One doesn't 'cap' unlined pits.
- 2) to the maximum safe extent, coal ash should be recycled by encasing in cement bricks, concrete and other methods.
- 3) emulate the bipartisan solution negotiated by Virginia this past week. Excavate these unlined pits ASAP. Recycle at least 25% of the coal ash and move the remainder into double-lined landfills away from rivers, lakes and aquifers with monitored Leak Detection systems. The double-lining would include 2' of clay on the exterior with a durable lining impervious to water.
4. Storage of hazardous waste must be designed with the following priorities:
 - A. Safety always comes First.
 - B. Maintenance Second.

As the California utility PG&E is belatedly learning the hard way, profits will evaporate if Safety and Maintenance are ignored.

Respectfully,
Steve Yaffe,

Have the state or local health departments conducted Cluster Analyses of cancers, epilepsy, asthma and other indicators of residents near these unlined coal ash pits, comparing in each indicator the incidence rate compared to the general population?

To Department of Environmental Quality.

I understand that you plan to “Cap in Place” six coal ash sites, where the coal ash is leaking into the rivers that provide drinking water. Duke wants this, saying it’s cheaper. These people, often in communities where people have already been dying of coal ash poisoning, deserve to have the coal ash excavated and taken back to Duke. Namely, Goldsboro and Belews Creek, but more deaths will come if you don’t take care of people first.

Of course, there is now a viable option, of using the method of making building materials out of the coal ash, without having to re-burn it. Check out the discovery at A&T University in Greensboro. Re-burning it for cement is toxic, too. Enough of this poison. Let Duke have it. Don’t do what Duke wants. They don’t care about people dying. Think of all those 37 institutions, mostly religious, which are shareholders and urged Duke to clean up after the hurricanes, and be sure not to harm the people living near these sites. Let Duke lose its investors big time. You take care of us citizens and stop poisoning us. Landfills leak, too, but if you put them on Duke property away from people and rivers, maybe Duke will learn something finally.

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr Cory Childers

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. The state of Virginia has taken action and is going to be definitely doing this work and more efforts will be used to clean up and out four sites of coal ash across the Dominion.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. It is the only and safest choice now.

Thank you and with best

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

I am in total dismay that Duke Power would recommend, and that the state of NC would even consider, "capping in place" five coal ash sites instead of excavation as they are proposing for eight other sites. Is it worth even the smallest risk to the health of some communities versus the profits of Duke Power? Who gets to make that call? Most likely, even careful monitoring would not prevent possible catastrophe until it is too late. Who knows what damage has already been done and/or is waiting to happen. Does the corporation that caused this in the first place take priority over even one citizen's health? Has Duke Power's negligence not already been proven?

My heart is broken that our state's government is even considering the idea of capping. I grew up within a few miles of two of the proposed "capping" sites. This is personal. But, more importantly, it is only ethical and moral to do the maximum clean-up at all the sites. I beg our officials to do the right thing. Our environment depends on it. Our lives depend on it.

Thinking of us all,
Jackie Ewendt

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I cannot comprehend why a company that is as community oriented as Duke Energy - which gives away literally millions of dollars to community, education, and environmental causes - fails to take this on. Maybe all the different parties affected by the heavy metal pollution contained in coal ash should apply for Powerful Communities grants... and use the money to hire professionals to clean this mess up. Or...

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Sandi Spier

I am a resident of Rutherford County where Duke Power's Cliffside coal plant is located.

Cliffside and 5 other coal ash sites that Duke has recommended capping in place deserves the same protection as 8 other North Carolina sites where all the coal ash will be excavation; nothing else avoids future poisoning of the waters at those sites and to all the people who live downstream. All coal ash sites in Virginia and South Carolina are being completely excavated. The option to cap the ash in place (Duke Energy's recommendation) and monitor the cap for 30 years as the "scientific equivalent" of excavation is a lie with tragic implications. Duke Energy's motivation is to minimize their costs of cleaning up the coal ash mess they have created over decades.

The DEQ's mission is to protect NC's environment and citizens. Please stand up to Duke Power.

Sincerely,
Bob Trotman

RE: Statement Regarding Duke Energy's Final Closure Plans for Coal Ash Impoundments

I moved to North Carolina in 2014 from Tennessee, where I witnessed the immediate aftermath of the largest coal ash disaster in the United States in late 2008. As a researcher, I spent a lot of time speaking with residents and workers impacted by the Tennessee Valley Authority spill. Had the disaster occurred during the day time, it could have been deadly for residents and the agency had opportunities to prevent the disaster prior to the spill by moving the ash to a lined, dry landfill, but the agency chose the cheapest route to address previous problems in the impoundment. In the long-run, the disaster cost much more than it would have cost to convert the impoundment to a lined landfill. The costs were not just felt by TVA, but by the community, especially those who were displaced, those who experienced devalued property, and those who fear the long-term health outcomes. DEQ and Duke Energy have the opportunity to make the right decision for everyone and to prevent future disasters, spills and leaks. **DEQ should require Duke Energy to remove its coal ash from its leaking, unlined impoundments and move it to dry lined storage.** This is what the community wants and it is the best choice for people, the environment, and water systems.

Subject: [External] Fwd: Comments re: Duke Energy's proposed closure options for coal ash basins
Date: Sunday, February 10, 2019 11:29:56 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To: NCDEQ Staff and Governor Roy Cooper

Date: February 10, 2019

We have lived in Rutherford County for 45 years. Bill was born and raised in West Virginia coal country and has witnessed first-hand how communities are damaged and even destroyed by companies that ignore the environmental damage of coal. Nancy grew up in Eden, N.C. just 3 miles from the coal ash spill in the Dan River. We attended the Coal Ash Basin Closure meeting at Chase High School on January 22. At that meeting a show of hands unanimously demonstrated support for the option of complete excavation and removal of all coal ash Duke Energy's Rogers station to a lined landfill. This letter is written in strong support of the Cliffside Community's right to clean water and a healthy environment, as well as the right of all those living and drinking water downriver from the Rogers Station.

Because clean water is an essential resource for all people, the standard of environmental justice needs to be applied to closure options for coal ash disposal. NCDEQ has a policy that states, "North Carolinians having fair treatment and meaningful involvement with respect to the development, implementation, and enforcement of environmental laws, regulation, and policies." NCDEQ also has a newly formed 16-member Environmental Justice and Advisory Board whose preamble states that, ". . .all people in North Carolina should have access to clean air, clean water, clean soil and the opportunity to live in safe and healthy communities."

DEQ's new mission states that, "Providing science based environmental stewardship for the health and prosperity of all North Carolinians can only be accomplished if fighting for Environmental Justice is part of every DEQ activity."

- Because environmental justice means the right of all people to live free from environmental threats,
- Because coal ash that poisons our water is a known, present, and future environmental danger,
- Because when environmental threats are identified, those accountable for creating the threats should be held accountable,
- Because Duke Energy created this threat by locating coal ash pits in close

proximity to major water sources and because they did this over decades to minimize their costs of dealing with the ash in an environmentally responsible manner,

- Because the states of South Carolina and Virginia have mandated excavation and removal of coal ash from all coal-fired power plants, there is no justification for differential treatment for six Duke Energy coal ash sites in our state,

- And because the Environmental Justice standard is simple—

THOSE WHO CREATE THE PROBLEM SHOULD FULLY BEAR THE RESPONSIBILITY TO CLEAN IT UP!

Therefore, we urge NCDEQ to mandate that Lyn Goode, Duke CEO, and Duke's Board of Directors meet their full responsibility to remove all the ash away from all water sources at the company's expense and without passing any of the costs to rate payers. Duke Energy is the largest investor owned utility company in the U.S. and has the financial resources and technical ability to eliminate the coal ash threat to water. Do not allow Duke Energy's cost estimates of coal ash removal to outweigh community health. There is no justification for Duke Energy's low-risk classification of the coal ash dump at Rogers Steam Station. Capping toxic coal ash and monitoring the cap for thirty years as Duke Energy proposes is a dangerous and disingenuous solution based on greed and scientific folly.

Therefore, it is imperative that NCDEQ apply the standard of Environmental Justice consistent with its own mission and require Duke Energy to remove all coal ash **AWAY** from all water sources and store it in a scientifically designed manner and at a location that prevents future poisoning of our North Carolina citizens. Any action other than this allows coal ash to remain a source of poison to our water forever.

On a personal note, our otherwise very healthy daughter developed a rare neuro-endocrine cancer at the age of 35. Although the cause of her cancer cannot be known, we do know that the environment is being bombarded by endocrine disruptors, which are the by-products of industrial processes and pollution. There can be no substitute for clean water and clean air and all efforts to achieve this end protect your families and ours.

Thank you,

Nancy and Bill McCullough

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

On behalf of friends who have well water whose water supply (near the Lake Wylie and Catawba River) is significantly compromised by the active coal ash and ash basins near them, I am reaching out to ask for a complete cleanup of these toxic sources. No one wants to bathe, drink or be exposed to toxic levels of chemicals that are known cancer-causing agents. SC and VA have REQUIRED all coal ash to be removed. The fact that NC is just haphazardly risking the lives of those near active coal ash sites is completely unacceptable and embarrassing as a state.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Jamie Goodman

Duke's responsibility to the public is to implement the safest method of coal ash disposal which is site excavation.

DEQ should require Duke Energy to remove its coal ash from all unlined, leaking pits and move it to dry, lined landfills, as is happening at 8 other NC sites. Full excavation is the safest option.

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. James Davidson

Duke Energy must be a responsible steward of the land sites it occupies, including the locations that contain their coal ash ponds.
Duke Energy is our Public Utility, meaning it operates through a contract with our Public Utility Commission and must meet criteria in order to continue operating.
Poisoning residents of North Carolina is not permitted in the contract.

Therefore Duke Energy must stop allowing coal ash residue to infiltrate drinking water sources.

This means Duke Energy must use the engineering solutions that 'get 'er done'.
This appears to be Full Excavation to a Lined Location, but **"DEQ must conduct independent analysis that identifies the safest closure option for the long-term protection of water supplies."**

Thank you for doing the right thing.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
John Braswell

Surely, a total of zero people think that leaving coal ash in unlined pits is a good idea for the health of our state and its citizens. It was NEVER a good idea to store this toxic waste in this manner, and it should never have been permitted to begin. Duke should be required to clean up its own mess onsite without inflating the "costs" of what it should have done in the first place.

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.

Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Maggie Rumley

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Nancy Orban

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Wesley Johnson
2801 Temple Ln
Charlotte, NC 28205

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Dawn Nelson

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. Lee Dugger

Dear Cliffside Closure Hearing Comments NC DEQ,

I am in full support of companies having to pay to pollute or fix it up themselves. This is where government has to step in and fix what companies don't want to do. The removal of coal ash from leaking unlined pits at the James E. Rogers Energy Complex is necessary and should be required. Please require Duke to take responsibility for their waste, especially if there is a viable option to do so and from what I understand there is dry lines storage available onsite away from the River and Cliffside groundwater. Please help protect the people of this community just like you would anyone else. I believe this is what your job requires you to do and what so many other states have already decided to do. It makes no sense to the people if you do not stop this blatant disregard for human rights to clean water and air. Thank you!

Sincerely,
Ms Steffi Rausch

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Rev. karen richardson dunn

Dear Cliffside Closure Hearing Comments NC DEQ,

Duke Energy should behave like other businesses and clean up the messes it makes. They are a large company and can do it--for the health of NC citizens.

Duke Energy wants to leave its coal ash at Cliffside right where it is: in massive unlined pits seeping into the groundwater and the Broad River, where the ash is polluting the groundwater with toxic heavy metals like arsenic, cobalt and hexavalent chromium. Duke's plan would simply cover the existing coal ash with a cap on top.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mrs. Chelsea Barnes

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Jay Marlow

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Dr Miriam Sexton

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Cliffside Closure Hearing Comments NC DEQ,

I was raised in Rutherford County and, though living in Buncombe County now, still have business interests in Rutherford and spend significant parts of my work week there. I am greatly concerned about the apparent plan to do less than the optimum to protect groundwater in the Cliffside region, and the Broad River, from the ongoing threat of pollution from coal ash. Rutherford and Cleveland Counties deserve the same level of concern as Buncombe County - where a more thorough protection effort seems to have been made.

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Kieta Osteen-Cochrane
36 Albemarle Rd Asheville, NC 28801-2004

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
PAt Colonna

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. J.A. Perry

P.S.

The very concept of having to tell a company not to spill and dump their waste in a way that it will devastate communities and the natural wildlife is baffling, having to them to cleanup after themselves when they have recklessly dumped their waste is even more baffling. Ignore statistics about profit margins, and remember families, children, parents, and entire communities who are all dragged down to the depths by the monstrous act of willful pollution.

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. There is no reason to let this cost be avoided because doing so degrades the liveability, risk level and competitiveness of the Broad River basin downstream as well as neighbors around Cliffside.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. "Capping in place" is not a well documented or secure strategy for waste containment. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

Rutherford and Cleveland county residents, and some of our South Carolina neighbors, deserve better. To comply with the law and protect water quality Duke must excavate its coal ash and remove it to an impervious site in the very near future.

Thank you for your consideration.

Sincerely,
Mr Chris Berg

I didn't make your mess! Why you jack up my light bill \$30.!!?

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Judy Parsons

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. Well, if you'd keep coal ash sealed in place, but when Hurricane Florence rained >30 inches in September, coal ash entered streams and stream sediments and rivers and floated as a plume of sludge to MY Newport River estuary and Beaufort Inlet, so I and my dog couldn't swim for months and I couldn't eat seafood. Coal Ash heavy metals scare me: arsenic, lead, mercury, cadmium, chromium, zinc, manganese, vanadium, molybdenum, nickel, iron, beryllium. CONTAIN THESE TOXICS, PLEASE!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Meredith Shelton

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. David Gordon

Hello,

I am writing to give input on how coal ash sites are closed in NC.

I ask that there be a complete excavation at every site. While other techniques may be cheaper, they require monitoring and are more risky for NC residents. Other states are seeing the need to choose the most effective technique for protection of water and residents. I ask that NC DEQ also work to protect the people and water of our state by requiring complete excavation of the coal ash sites.

Thank you,
Lauren Nyland

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

I live on Lake Norman near Marshall Steam Station and drink water from a well. So any coal ash incident which contaminated the ground water or spilled into the lake itself would have a terrible impact on my property, and the thousands of others who call the lake home. And the thousands more who may not live on the lake, but depend on the water table for safe drinking water for their family. Let's all say that we did not know the consequences of storing coal ash in unlined pits in the past. But we do now. Let's mandate that all coal ash in N.C. be placed in dry, lined pits away from waterways. And we, the taxpayers of North Carolina and customers of Duke Energy will bear the cost. We are responsible for the mess that we made and we owe it to our children and grandchildren to fix this and fix it in a manner that cannot impact them in the future.

I know there are arguments about storing the Marshall coal ash onsite or offsite. I will let people smarter than me decide that. But I ask you to require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

My husband & I live on Lake Norman near Marshall Steam Station and drink water from a well. So any coal ash incident which contaminated the ground water or spilled into the lake itself would have a terrible impact on my property, and the thousands of others who call the lake home. And the thousands more who may not live on the lake, but depend on the water table for safe drinking water for their family. Let's all say that we did not know the consequences of storing coal ash in unlined pits in the past. But we do now. Let's mandate that all coal ash in N.C. be placed in dry, lined pits away from waterways. And we, the taxpayers of North Carolina and customers of Duke Energy will bear the cost. We are responsible for the mess that we made and we owe it to our children and grandchildren to fix this and fix it in a manner that cannot impact them in the future.

I know there are arguments about storing the Marshall coal ash onsite or offsite. Leave some, move some, (truck or train it out!) but I ask you to require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. And someone other than Duke Energy make sure it this is all done properly.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for NC DEQ and Duke Energy to listen to the communities. The NC DEQ works for the citizens of North Carolina not Duke Energy!

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. NC DEQ protect ALL of North Carolina and do the right thing and not let Duke Energy ruin our beautiful state.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

How can this be anything but obvious? Coal ash is caustic and causes serious damage to waterways, and by extension, small businesses, tourism, animals, birds, fish, reptiles and people. When that ash got dumped into the Dan River, people were instructed not to touch it. If something is too caustic to even touch, what kind of damage is it doing to the ecosystem?!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Cleaning up coal ash and keeping it out of our water is a cost of burning coal. If we want the market to allow the best and most cost effective ways of generating electricity to prevail in our economy, we can only have that when energy systems cover their own cost as they do business. How many bonuses and pay raises have Duke executives received from the proceeds of externalizing the real cost of dealing with their own waste? Prevention is nearly always cheaper than trying to clean up after a spill. Coal ash spills can never be completely cleaned up. The damage cannot be undone. Prevention is the only viable option for keeping our land, water, wildlife, and our wells safe. There is no excuse for not doing it.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Andrea Fraser

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Ronnie Smith

- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Michael Weiss

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
diane voynick

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

As an engineer, my greatest concern is how coal ash ponds react during historic rain events as Climate change trends show an increasing rate of these events. We recently saw coal ash ponds over run their banks during the Tropical Storm & Hurricane events of Fall 2018. This overflow went directly into the watershed.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Christina Derrick

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Ty Kays

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Anne Gietzen

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

Duke Energy has shown a complete disregard for their customers and fellow citizens by knowingly and willingly sacrificing our health and safety for extraordinary profits. Paying shareholder healthy dividends does not release you from the moral and ethical responsibility to safe guard your customers and the environment. Your callus approach to profits would make it appear that the company does not believe it can ethically conduct business and still be profitable which of course is not true. I has been demonstrated by more than a few companies that implementing a management philosophy that relies heavily on business ethics are proven to be more successful than those that operate in an unethical manner.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to act in an ethical manner and remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. It is DEQ's responsibility to protect the health and well being of all Carolinians so please do your job.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Karl Jennings

Xelba@cwfn.org

February 14th, 2019

To the decision makers at NC DEQ:

Please accept the following written comments from Clean Water for North Carolina (CWFNC) on the proposed coal combustion residual impoundment closure options for the ash basin located in Rutherford and Cleveland Counties, NC at Duke Energy's Rogers Energy Complex. CWFNC is a nonprofit organization that has been working with NC communities for clean water and environmental justice for more than 30 years. We have members from across the state including Rutherford and Cleveland Counties.

Duke Energy's proposed impoundment closure options for the coal ash basin at the Rogers Energy Complex site (formerly Cliffside Steam Station) do not appropriately capture risks to groundwater, surface water, the surrounding and downstream communities, and the environment. Any coal ash sitting in an unlined basin at Rogers Energy Complex (REC) should be completely excavated and moved to the onsite landfill, considering information from the community, and our review of Duke Energy's Comprehensive Site Assessments and Corrective Action Plans, surface impoundment reports, and closure options.

Comments on community impacts:

- According to Duke Energy's own Emergency Action Plan, all unlined basins at Cliffside have a current high hazard potential, meaning if failure occurred impacts to communities' safety could be disastrous.
- In the event of a breach due to dam failure or storm, Duke's flood inundation maps show 70 structures could be inundated. However, the same document acknowledges no population at risk.
- Cliffside's dams have a history of deficiency notices for many of the same problems

that caused the Dan River Spill. Impoundment Inspection Reports have previously described leaching and cracking at most pipe joints, small and large animal burrows in embankments, and soil erosion and liquefaction. Furthermore, historic rain events have been responsible for many coal ash related spills and landfill breaches at Cliffside which puts the community at great risk.

- The stigma of polluted groundwater could compromise property values for generations.
- Demographically, the residents near the Rogers Energy Complex are particularly vulnerable as compared to state averages. Important information to consider about the area within a ½ mile radius of the active ash basin:
 - Average per capita income is \$18,000
 - 47% Low-income population
 - 17% population with less than a high school diploma

Due to the vulnerabilities of residents in this area, special care must be taken to fully characterize the many risks they face. Full excavation is the only closure option possible for DEQ to fulfill their mission to protect communities across NC.

Comments on Groundwater:

The active basin at Cliffside should be fully excavated based on the risks for groundwater safety

- The active coal ash basin at the Rogers Energy Complex violates federal CCR rules with coal ash sitting below the groundwater level.
- Duke recently reported groundwater exceedances for cobalt and arsenic. Arsenic is colorless, odorless, tasteless and toxic to human life - a known carcinogen. Cobalt is associated with cardiovascular health effects. In 2013, Duke discharged over 21,000 pounds of cobalt at Rogers Energy Complex. Cobalt has historically been the most common contaminant at high levels found on private wells in the surrounding community.
- The polluted groundwater from the basins flows into the Broad River and Suck Creek, which are drinking water sources for Shelby NC, Gaffney SC, and other downstream

municipalities.

- There is not enough evidence and independent oversight to support Duke's claim that nearby well water pollution is not coming from the coal ash impoundments. DEQ must conduct an independent analysis that identifies the safest closure option for the long-term protection of water supplies.
- Duke University research indicates that "closure" by cap in place does not protect groundwater and could instead increase the leaching of deadly arsenic due to a lack of oxygen exposure following the "capping" procedure. If capped in place Duke Energy will be required to monitor the basin for only 30 years while leaving the ash to leach into surrounding water supplies indefinitely.
- Experts at Duke Energy's 2016 Disposal Forum shared insight highlighting how significant rainwater infiltration will continue at unlined capped sites. DEQ must take this into account given the increase
- in historical rainfall events due to climate change and the record for 2018 as the wettest year in the history of NC.

Comments on Coal Ash cleanup leadership

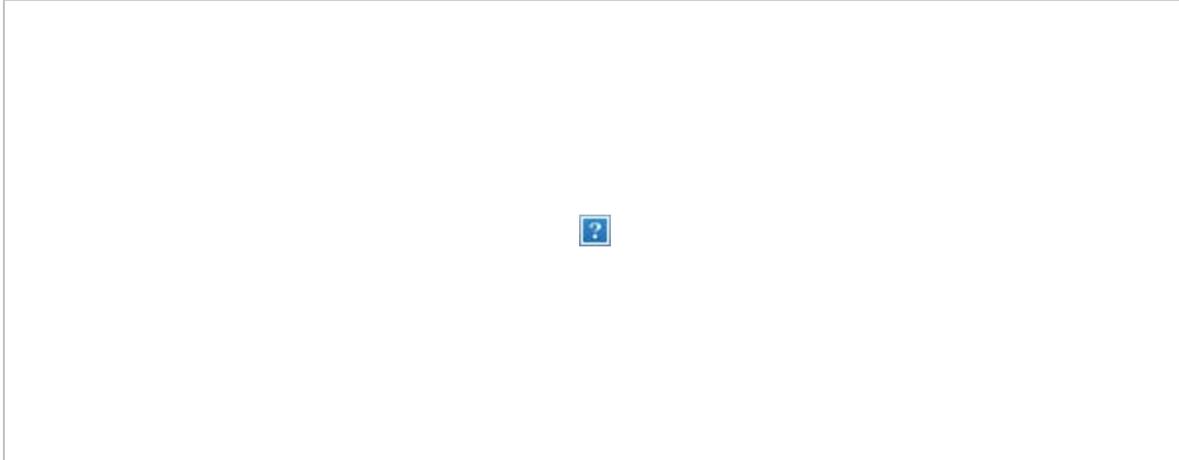

Governor Cooper run a campaign promising environmental and community protection from coal ash, but has yet to act on this issue. Neighboring states are moving forward to protect their communities from Coal ash:

- South Carolina has required its coal-powered utilities, including Duke, to clean up all unlined coal ash basins in the state. Follow-up testing conducted before and after SC coal ash cleanups has shown decreases in contamination at the site by over 95% for toxic metals like arsenic.
- In Virginia, there is strong support for a bipartisan bill that will require Dominion Energy to completely excavate all of its unlined basins in the state. Dominion Energy has reportedly announced that it supports the proposal to remove coal ash from unlined ponds across Virginia.

Given promises made by Governor Cooper during his campaign, and the recent decisions from South Carolina and Virginia to fully remove coal ash, DEQ should not allow NC's coal ash to be permanently left behind to pollute groundwater and surface water across the state of NC for generations to come.

Comments regarding costs for different closure options:

- The Cliffside Closure Options Evaluation Report is misleading. It states that closure by removal is almost double the cost of cap in place, yet within the report, a cost analysis table with the post-closure maintenance cost, shows that closure by removal is just over \$40 million more than the price to leave the ash in place. See the table below:

- \$40 million is a small amount for Duke Energy given its annual operating revenue of over \$22 billion and knowing that they paid its CEO over \$21 million last year, a 55% increase from the previous year.
- None of the estimates include the cost of remediation for pollution that has already happened and violations that will continue in the future. Nor does it account for the expenses incurred by the community members themselves if their health is affected.
- Cost of cleanup shouldn't outweigh community health nor is it the responsibility of DEQ to consider costs to ratepayer as this is the duty of the Utilities Commission.

Comments on Duke's data analysis and reporting

Data and reporting provided by Duke Energy have repeatedly been shown to be flawed and misleading:

- DEQ's own January 2016 report acknowledges data gaps that point to a mischaracterization – unintentional or intentional - of the influence of contamination from the active ash basin on the water supply wells.
- There are not enough monitoring wells east of the active ash basin, and the deep layer of groundwater moving through fractured bedrock has not been sufficiently studied by DEQ and Duke.

- DEQ's report acknowledges "data gaps related to groundwater uncertainty include incomplete capture zone modeling in fractured bedrock for up-gradient and side-gradient supply wells in the immediate vicinity of the impoundments."
- An independent review of the Allen Steam Station Comprehensive Site Assessment identified multiple reporting and scientific errors and illustrated how the Comprehensive Site Assessment authors selected only the data that supported the desired conclusion (groundwater from the coal ash basins is not influencing private wells).

These include:

- "Cherrypicking" to include only 9 of 45 shallow monitoring wells reported in the groundwater flow tables in the CSA, when inclusion of all 45 wells' data would have given a clearer picture of groundwater flow and direction
- Failing to identify all the potential wells in the vicinity that could serve as 'sinks' in the groundwater model, thus shifting the direction of groundwater flow;
- Basing modeling of groundwater flow only on overly simplistic hydraulic gradient calculations.

In the absence of an outside review source on coal ash management, DEQ should seek independent experts for an objective review of all Duke's generated reports and closure options plans for all sites. Given these data gaps and the toxicity of the contaminants with groundwater exceedances next to these ash basins, including arsenic and cobalt, there is NO excuse to leave the coal ash in the unlined basin by capping in place or consolidating the ash for a hybrid cap option.

Conclusion

For these reasons, we know that any coal ash stored in unlined basins at the Rogers Energy Complex presents a real and urgent risk to groundwater, surface water, and local safety, and should be fully excavated.

The Cliffside community has come out time after time over the last several years, making their concerns clear about pollution from Duke Energy's coal ash and they want Duke Energy to get its coal ash out of its unlined, leaking pits. It is past time for DEQ to listen to the community—not Duke Energy's consultants—about what the community needs. We need Duke to clean up its coal ash and stop the water pollution.

As NC marks the 5th anniversary of the Dan River coal ash catastrophe, the third largest coal ash spill in US history, we ask of DEQ to stop allowing Duke to put communities at risk and clean up the coal ash disaster they created. Full excavation is the safest closure option for the nearby communities and the only option that fulfills DEQ's mission.

Sincerely,

Xavier Boatright, Environmental Justice Researcher

Amanda Strawderman, Program Coordinator

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to citizens living in or near those communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. If the removal and subsequent re-storage is required at those sites, why would it not be required at the six remaining sites? The families living in or near those communities deserve the same protections from pollution caused by improperly stored coal ash.

Regards,
Paul Hinkle

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Duke created this problem, not their customers and should pay for the clean up, regardless of what it does to their stock prices. Perhaps those who were receiving huge dividends and making millions on stock options should be required to pay up as well. Duke has also been allowed to make Billions of dollars in sales of waterfront real estate through Crescent Land and Timber. I believe that ALL of this land should be the subject of a Federal Investigation as to whether Duke knowingly sold these parcels that are contaminated. A class action lawsuit may well be called for.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Laura Wuest

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mrs. Dot Sulock

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Dee Anderson

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

As a former environmental scientist for the Florida Department of Environmental Protection, I am compelled to provide my observation: Duke has not provided reasonable assurance that the Marshall and Allen coal ash ponds will be in compliance with federal and state environmental laws.

To be clear, it is impossible for anyone to provide any reasonable assurance that a hazardous waste storage site will be in compliance when: (1) the site is already out of compliance and (2) cannot be corrected without the complete excavation, installation of proper lining, and construction of containment infrastructure. We know that coal ash and derivative contaminants AR in the groundwater table at both the Marshall Steam Station and the Allen Steam Station. Duke has stipulated to those facts, as well.

Consider that if the coal ash is excavated, in order to construct an appropriately lined storage reservoir, a new permit application (not modification) would normally be required and fair and equal standards applied. As part of that application, the riverside and lakeside locations would probably not be selected for a new facility under today's siting rules.

Indeed, it appears that Duke has been given preferential treatment, evidenced by the arbitrary procedural measures taken to reclassify its ash ponds as reduced risk. The risk reduction was not granted because of changed physical conditions on-site. Rather, the risk was reduced simply because Duke asked for a favorable reassessment. A different standard was applied. Reviewers appear to have tailored their assessment in order to reclassify the sites because the potential risk of the sites has only increased due to the increased amount of material and aging of the facilities. This counterintuitive risk assessment and decision-making process satisfies the (normally difficult to illustrate) "arbitrary and capricious" standard required to revoke a permit.

I also expect that other facilities have not been granted the option to cap hazardous waste in-place when it was actively contaminating groundwater, wetlands, and surface waters-- particularly drinking water supplies. Although no site is equal, North Carolina residents and businesses require an equal application of the law. The mere fact that a cap-in-place option was extended to Duke illustrates unfair and improper application of administrative rules and procedures.

From a permitting or compliance administrator's perspective, it will be a nightmare address ongoing, chronic violations at these sites as hydrological and geological processes continue. Leaving the waste at these locations indefinitely requires an unacceptable amounts of government hand holding and babysitting. I don't think the State of North Carolina is prepared to assume the role of adoptive parents of two problem children.

For decades, Duke has abdicated its responsibility to better dispose of and recycle its coal ash. It is time that Duke assumes the responsibility.

It is also time that NCDEQ stops deferring to Duke. NCDEQ has the staff and the expertise. So, deference to information provided by Duke contractors at public meetings is an insult to the talented scientists, engineers, and technicians working for the state of North Carolina.

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
James Feldmeyer

Subject: [External] Coal Ash Clean-Up and DEQ Permits
Date: Friday, February 15, 2019 11:28:24 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

NC Department of Environmental Quality,

North Carolina's coal ash dumps and ponds must to be cleaned up and DEQ should only allow complete encapsulation for the new ash storage facilities. The existing dumps should be carefully excavated to minimize airborne particulates and moved away from rivers and flood plains to fully lined sites on Duke Energy's property.

Cap-in-place is unacceptable for **any** of the coal ash sites in North Carolina. Any "solutions" proposed by Duke Energy that do not excavate and move ash to fully lined, scientifically designed systems that fully encapsulate coal ash must be rejected. Without multiple, sealed bottom, side, and top liners, North Carolina's groundwater will always be at risk. Due to increases in extreme weather, more frequent hurricanes and massive rainstorms, groundwater models of 100 or 500-year floodplain are obsolete. Given the unpredictable fluctuations in the water tables and groundwater flows, there is no way that surface capping without properly engineered underlying bottom liners can protect groundwater in the coming decades.

Unlike Duke Energy's new lined landfill at Brickhaven in Chatham County, the construction of all new lined landfills should be scientifically engineered to protect groundwater in every way possible. Duke Energy's has a long history of widespread groundwater and surface water contamination, and criminal violations of the clean water act. Because of these repeated and gross violations that created health problems and drinking water contamination throughout the state, DEQ should require Duke Energy's new landfills to go beyond the minimal mandatory protections provided by current regulations. DEQ must carry out independent studies and obtain recommendations for the best liner technologies, redundant liners, and with multiple long-term safeguards. Scientifically based placements for baseline and ongoing groundwater monitoring wells should be established. These must be thoroughly and constantly monitored – with full, public, transparent, internet accessible, easily available data from the monitoring results.

Ground water and surface monitoring should be ongoing for a minimum of 50 years. This monitoring should be funded by Duke Energy, but carried out by independent, qualified field technicians and laboratories.

During excavation, construction, and filling of the landfills, all worker safety measures should be taken to prevent a repeat of the serious harms to worker health from the cleanup crews that worked on the TVA spill in Kingston, Tennessee. Again, unlike Brickhaven, worker safety, proper fitting and testing of N95, or better, particulate masks should be required for everyone that works in or around the coal ash, or that operates bulldozers, dump trucks, or heavy equipment that transport the ash. Wherever needed, full protective suits should be provided to workers. Regularly scheduled OSHA inspections, as well as unannounced and unscheduled OSHA inspections should be part of the clean-up and construction permits until all exposed ash is fully covered at each site.

While transporting existing coal ash dumps away from rivers and floodplains is essential, every effort should be taken by DEQ to ensure that the distances coal ash is moved is minimized and that the coal ash destinations are always kept on Duke Energy's property.

Once constructed, these new lined landfills should represent the best technologies and materials available – not materials that create short-term financial savings. The original existing dumps were disasters for public health, for NC communities, and for our state's waters. We have this one chance to remediate some of the damages and most importantly, to safeguard future generations from heavy metal coal ash contamination. Our state-wide re-design of storage systems for millions of tons of coal ash must be done right this time.

No coal ash sites, no coal ash communities should be considered low-risk, and all deserve full protection. Gross environmental justice violations have been committed by the past handling of coal ash placements and coal ash processing practices. Now, DEQ must protect all communities. The NC Department of Environmental Quality must ensure that none of these communities, which have experienced many decades of harm, are given less than full protections. No cap-in-place permits should be allowed.

Thank you,
John Wagner

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Mr. Charles Froelich

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Peter Brezny

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Sara hodge
1360 Jupiter Rd

Rogers Energy Complex (Cliffside) Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Rogers Coal Ash Cleanup

null

- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage on its own property — away from the Broad River and out of our groundwater.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Cliffside, where it will keep polluting our groundwater, streams and rivers. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Cliffside with toxic and radioactive materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy can dispose all the ash from its leaking ponds onsite in an existing safe, lined landfill. Ash will not travel through the community or to other communities.
- Duke cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. None of these plans will have a significant increase in offsite trucking, and only excavation will remove the source of the water pollution.
- Duke Energy's own experts know that even cap-in-place will involve trucking construction materials to the site—just like any other construction project. But even under their estimates, the additional trucking impacts are next to nothing. Duke Energy's consultant estimates that 97 trucks currently travel near Cliffside on community roads every day. Excavation would add only nine more trucks on community roads each day, compared to 13 more trucks on community roads for the duration of the cap-in-place scenario.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Hal Trufan

Subject: [External] Duke Energy GHG submission
Date: Friday, February 22, 2019 11:22:36 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

We learned yesterday that – as soon as the Feb. 15 comment deadline for the closure options evaluations had passed -- Duke Energy submitted an additional report that purports to estimate greenhouse gas emissions associated with the various closure options for its six unresolved coal ash sites in North Carolina.

We will submit a detailed response to this report shortly.

However, NCDEQ should disregard this submission because it was made after the department's deadline for Duke to submit its materials and outside the public comment period, denying the public an opportunity to respond to it. NCDEQ should also disregard this submission because it is irrelevant to the decision facing NCDEQ, which is to select a closure method that stops the ongoing pollution and continuing threat to our water resources posed by Duke Energy's leaking coal ash basins. Duke Energy operates coal-burning generating units at each of these facilities that emit huge amounts of greenhouse gases, and NCDEQ would lose all credibility if it allowed Duke Energy to leave the toxic residuals from burning coal in leaking pits forever because of Duke Energy's supposed concern for greenhouse gas emissions.

Nor should NCDEQ and the Cooper Administration delay their decision as a result of Duke Energy's gamesmanship. NCDEQ already knows that Duke Energy's cap in place and hybrid closure plans would leave millions of tons of coal ash saturated in groundwater, where they will continue to leach toxic pollutants into public waters for decades to come, and where they will continue to pose a risk of catastrophic failure. And it knows that tens of thousands of North Carolinians have called on the agency to protect our waters by removing the ash from the unlined lagoons and placing it into dry, lined storage or recycling for concrete, as is being done in South Carolina and Virginia. It is time to require Duke Energy to remove its coal ash from the unlined basins at these six sites.

Thank you for your consideration,
Nick Torrey

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Maura Straczek

Dear Cliffside Closure Hearing Comments NC DEQ,

I urge you to require Duke Energy to remove the coal ash from their leaking, unlined pits and to move it to dry lined storage, which is already available onsite, away from the Broad River and the groundwater of Cliffside. The Cliffside community has come out time after time over the last several years to make their concerns about this toxic coal ash clear. It is long past time for DEQ to listen.

The coal ash pit at Cliffside extends dozens of feet deep into the groundwater table, violating of federal and state rules. Cap in place in place won't solve these problems; it will just hide them. Duke's own models show that cap in place will continue polluting groundwater for 500 more years!

North Carolinians deserve better. To comply with the law and protect water quality Duke must excavate its coal ash now.

Thank you for your consideration.

Sincerely,
Ms. Robin Southeorvo

Dear Coal Ash Comment Administrator North Carolina DEQ: Rogers,

My address is in South Carolina but I live 2 minutes from the state line and work in Pineville. Charlotte is my birth place.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Daniel burBura
