1 Introduction

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. This report will examine the demographic and environmental conditions within Rowan and Davidson Counties, respective census tracts 507, 508, 509.01, 617.03, 617.02, and 618.04, as well as, a one-and-one-half-mile radius around the Buck Combined Cycle Plant.

The Buck Combined Cycle Plant is a 620-megawatt nominal capacity electric power generating facility located on the Yadkin River in Salisbury, Rowan County, N.C. It includes two fuel-efficient and clean burning combined cycle combustion turbine generators that burn natural gas to heat compressed air – which turns a turbine to generate electricity. These units recover heat from the exhaust gases to produce steam – which turns another turbine to produce additional electric power. This natural gas plant was placed into service in 2011 and is equipped with advanced emissions control. A selective catalytic reduction (SCR) unit reduces nitrogen oxide emissions and an oxidation catalyst minimizes carbon monoxide (CO) and VOC emissions.

The site originally began producing electricity in 1926 as a coal-fired steam station. However, all coal-fired units were retired in April 2013. The current natural gas plant is a source of energy with considerably lower emissions, including 92% less nitrogen oxides and nearly 100% less sulfur dioxide per unit of power generated than the former coal plant.

This report will evaluate the results of the demographic and environmental conditions within one-and-one-half-miles of the Combined Cycle Plant to determine any disproportionately high or adverse environmental and human health effects on low-income or minority populations.

2 Environmental Justice Evaluation

The North Carolina Department of Environmental Quality (Department or NCDEQ) has assessed the potential impact on communities surrounding the proposed construction and operation of new emission sources and control devices to process fly ash that is a byproduct of coal power plants into a commercial product that can be added to Portland cement in concrete mixes to improve workability, increase durability and lower permeability at the Buck Combined Cycle Plant in Salisbury, NC. The assessment of potential impacts has included:

- Review of a Permit Modification – Beneficiation Facility Expansion, onsite.
- Fugitive Emission Sources
- Point Source Emission Units
- Emissions from the STAR System
- Potential Emissions from the STAR System
- Regulatory Evaluation
- Compliance Assurance Monitoring
- Facility Wide Air Toxics
- Modeled Emissions Rates
- Facility Emissions Review
- Study of area demographics are determined by utilizing EPA Environmental Justice tool (EJScreen) <https://ejscreen.epa.gov/mapper/> and current available census data. <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>
- Comparison of area demographics to project county census data.
- NCDOT demographic criteria were used to determine demographic statistical areas along the transportation route.
- Complete a confirmation site visit to ensure current available census data was accurate.
- Communicate with public and public officials in neighboring communities.

3 Project Proposal

Duke Energy is proposing to install and operate a fly ash processing facility consisting of a Staged Turbulent Air Reactor (STAR®) plant and associated ancillary activities. To support this project, Duke Energy is applying for a minor source construction permit that is the first part of a two-step significant modification of the current Title V permit to install and operate a fly ash processing facility at the Duke Energy Carolinas, LLC - Buck Combined Cycle Facility. The proposed facility is designed to annually process up to 400,000 tons of coal combustion fly ash with other ingredient materials to produce a high-quality class F fly ash for use in ready mix concrete or other commercial products. It uses a proprietary technology from the SEFA Group Inc. called STAR® - to chemically and physically convert fly ash into a low-carbon material that meets the American Society for Testing and Materials (ASTM) Standard C618-08, "Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete" of no more than 6% by weight loss-on-ignition (LOI) content to be suitable for use in concrete.

The preparation of fly ash for beneficial use in the manner proposed by Duke Energy is encouraged by the U.S. Environmental Protection Agency (EPA). EPA finds "this practice can produce positive environmental, economic, and product benefits such as reduced use of virgin resources, lower greenhouse gas emissions, reduced cost of coal ash disposal, and improved strength and durability of materials."

4 Geographic Area

The Buck Combined Cycle Plant is a 620-megawatt nominal capacity electric power generating facility located on the Yadkin River in Salisbury, Rowan County, N.C. Demographics of Rowan and Davidson County will be determined and compared at a local level to better recognize any variations surrounding the project area. Using standard practice Title VI guidelines, the following conditions for local settings will be flagged as potential communities of concern:

1. A greater than 10% difference in comparison to the county average
2. 50% or more minority population within project area
3. A greater than 5% difference in comparison to the county average for poverty

For example, if a census tract has 35% of the population low income but the county only consists of 30% low income, the census tract would exceed the county average by 10.5% and thus be flagged as a potential area of concern. In addition, the communities along the transportation route were considered by looking into the Direct Community Impact Areas (DCIA) and the Demographic Study Areas (DSA) per the NCDOT guidelines (Section 9).

5 Regional Setting

The below sections on race and ethnicity, age and sex, disability, poverty, household income, and Limited English Proficiency (LEP) populations are based on US Census Bureau data at a county level. Demographics of Rowan and Davidson Counties will be determined and compared to the local settings to better recognize any variations surrounding the project area.

5.1 Race and Ethnicity

5.1.1 Rowan County

According to the 2010 US Census Data QT-P3, Race and Hispanic Origin: 2010; 2010 Census Summary File 1 report, the highest populations within Rowan County's population of 138,428 were White, Black or African American, Hispanic or Latino (of any race), Mexican, Some other Race, Other Hispanic or Latino, and Two or More Races with 76.5%, 16.2%, 7.7%, 5.4%, 4.3%, 1.8% and 1.6%, respectively (Table 5-1).

5.1.2 Davidson County

According to the 2010 US Census Data QT-P3, Race and Hispanic Origin: 2010; 2010 Census Summary File 1 report, the highest populations within Davidson County's population of 162,878 were White, Black or African American, Hispanic or Latino (of any race), Mexican, Some other Race, Two or More Races, Other Hispanic or Latino, and Asian with 84.3%, 8.9%, 6.4%, 4.7%, 3.6%, 1.5%, 1.3%, and 1.2%, respectively (Table 5-1).

Table 5-1. U.S. Census Bureau, Race and Ethnicity -Rowan and Davidson Counties

Race and Ethnicity	Rowan County		Davidson County	
	Number	Percent	Number	Percent
Total Population	138,428	100	162,878	100
White	105,923	76.5	137,359	84.3
Black or African American	22,392	16.2	14,421	8.9
American Indian or Alaska Native	468	0.3	794	0.5
Asian	1,386	1	1,994	1.2

5.2 Age and Sex

5.2.1 Rowan County

According to the US Census Bureau, QT-P1, Age Groups and Sex: 2010 Census Summary File 1, Rowan County had a total male and female population of 138,428. The highest percentage of the Rowan County population was between the ages of 18 and 64, with a median age of 37.9 for males and 40.2 for females (Table 5-2).

5.2.2 Davidson County

According to the US Census Bureau, QT-P1, Age Groups and Sex: 2010 Census Summary File 1, Davidson County had a total male and female population of 162,878. The highest percentage of the Davidson County population was between the ages of 18 and 64, with a median age of 39.5 for males and 41.2 for females (Table 5-2).

5.3 Disability

5.3.1 Rowan County

According to the 2012-2016 American Community Survey 5-Year Estimates, B18101 from the US Census Bureau, Rowan County had an estimated total population of 137,596 noninstitutionalized civilians. Of those civilians, an estimated 16.7% had a disability. The highest population by percent of disabled civilians were 65 years and over (92.2%). The percentage of disabled males of any age (17.3%) were higher than females (16.1%). Two or more races had the highest estimated disability rate by percent of 22.2%. White, Black or African American, and Hispanic or Latino were also potential races with disabilities in Rowan County at 17.6%, 14.8%, and 7.2%, respectively (Table 5-3).

5.3.2 Davidson County

According to the 2012-2016 American Community Survey 5-Year Estimates, B18101 from the US Census Bureau, Davidson County had an estimated total population of 162,188 noninstitutionalized civilians. Of those civilians, an estimated 17% had a disability. The highest population by percent of disabled civilians were 65 years and over (82.5%). The percentage of disabled males of any age (17.3%) were slightly higher than females (16.7%). Native Hawaiian and Other Pacific Islander had the highest estimated disability rate by percent of 27%. American Indian, White, African American, Some other race, Two or more races, Asian, and Hispanic or Latino were also estimated racial populations with disabilities in Davidson County at 23.8%, 18.0%, 16.5%, 11.2%, 10.1%, 9.3%, and 8.0%, respectively (Table 5-4).

5.4 Poverty

5.4.1 Rowan County

Table 5-5 consists of data from Census Table S1701, 2012-2016 American Community Survey 5-Year Estimates for Rowan County, North Carolina. In 2016, Rowan County had an estimated population of 134,439, with 18.0% living below the poverty level. With an estimated population of 269 American Indian and Alaska Native citizens living in Rowan County, this group had the highest percent living below the poverty level at 50.9%. White civilians had the largest population of 99,273, but only 13.0% living below the poverty level. The highest percentage of the population by age living below the poverty level in Rowan County, were citizens under 18 at 27.7%.

5.4.2 Davidson County

Table 5-6 consists of data from Census Table S1701, 2012-2016 American Community Survey 5-Year Estimates for Davidson County, North Carolina. In 2016, Davidson County had an estimated population of 161,417 with 16.0% living below the poverty level. The largest percent of the population by race living below the poverty level was American Indian and Alaskan Native at 33.6%. The largest population by age living below the poverty level in Davidson County by percent were citizens under 18 at 23.8%.

5.5 Household Income

The following table (Table 5-7) was completed using data from the Census Table S1901, Income in the Past 12 Months (in 2016 Inflation-Adjusted Dollars) 2012-2016 American Community Survey 5-Year Estimates for Rowan and Davidson County. The household income range with the highest percent was for \$50,000 to \$74,999, at 19.3%. Rowan County had a median household income of \$44,494 and a mean household income of \$57,365.

Within Davidson County, the household income range with the highest percent was \$50,000 to \$74,999, at 19.4%. Davidson County had a median household income of \$44,469 and a mean household income of \$58,052.

5.6 Limited English Proficiency (LEP)

5.6.1 Rowan County

According to the Census Table B16001, Language spoken at home by ability to speak English for the population 5 years and over, 2011 -2015 American Community Survey 5-year Estimates, for Rowan County, only English was spoken by an estimated 90.80% of the county (Table 5-8). An estimated population of 9,734 people spoke Spanish or Spanish Creole at home, approximately 7.47% of the total population of Rowan County. Of the 7.47% that speak Spanish or Spanish Creole, 3.79% speak English “very well” and 3.67% speak English “less than very well.” Serbo-Croatian was also spoken “less than very well” by 0.19% of the population in Rowan County.

5.6.2 Davidson County

Within Davidson County, Spanish or Spanish Creole had the largest estimated population of any language spoken after only English, at 9,181 individuals (5.93%). Only English was spoken by an estimated 92.13% of the county (Table 5-8). Of the 5.93% that spoke Spanish or Spanish Creole, 2.99% spoke English “very well” and 2.95% (4,557) spoke English “less than very well.” No other languages were spoken “less than very well” in Davidson County above 0.1%.

5.6.3 Safe harbor guidelines

Should an LEP Group be identified during the pre-permit issuance process, written translations of vital documents for each eligible LEP language group that constitutes five percent or includes 1,000 members (whichever is less) of the population of persons eligible to be served or likely to be affected or encountered. If there are fewer than 50 persons in a language group that

reaches the five percent trigger, then DEQ would not translate vital written materials but provide written notice in the primary language of the LEP language group of the right to receive competent oral interpretation of those written materials, free of cost. The safe harbor provisions apply to the translation of written documents only. Safe harbor guidelines are per the EPA guidance for LEP persons. The only language identified through the US Census as a potential language for the Department to provide translation or an interpreter under the safe harbor guidelines was Spanish or Spanish Creole in Davidson County. If identified as a concern for this project, the Department will take this into consideration.

6 Local Setting

The below sections on race and ethnicity, age and sex, disability, poverty, household income, and LEP population are based on US Census Tract data to display demographics at a local level. Local level demographics consist of the six census tracts that overlap with the one-and-one-half-mile project radius (Figure 6-1) and the one-and-one-half-mile project radius (Figure 6-2).

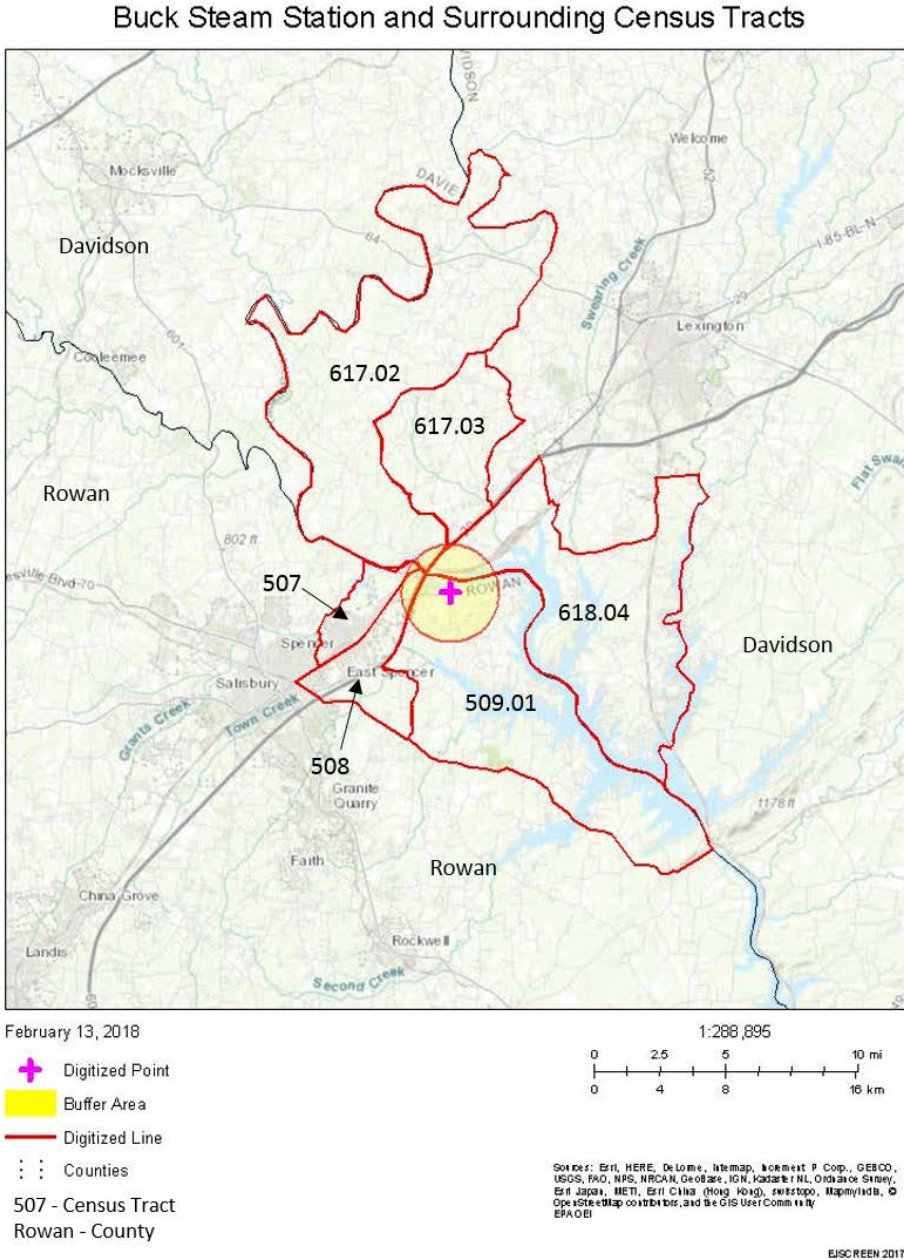

Figure 6-1. Map of Rowan County and Davidson County Census Tracts

Figure 6-2. Map of One-and-one-half-mile Radius around the Proposed Beneficiation Project

6.1 Local Industrial Sites

Buck Combined Cycle Plant is surrounded by industrial and manufacturing areas to the west and south. Some of the industries/businesses near the Buck Combined Cycle Plant include:

- Cruiser Works
- Cruise-In Classic Car Restoration
- Fortson Freight Systems, Inc.
- Innospec Active Chemicals
- Martin Auto Sales
- Sharp Transit
- Swing Transport, Inc.

6.2 Local Sensitive Receptors

The Environmental Protection Agency suggest that sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, elderly housing and convalescent facilities. These are areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Extra care must be taken when dealing with contaminants and pollutants in close proximity to areas recognized as sensitive receptors. For instance, children and the elderly have a higher risk of developing asthma from elevated levels of certain air pollutants than a healthy individual aged between 18 and 64. Within the one-and-one-half-mile project radius, three churches were identified; Bethel Church, Yadkin Church, and Trading Ford Church. During a further detailed review of available data, two retirement homes were identified just outside of the one-and-one-half-mile radius; Bethamy Retirement Center and Hilltop Living Center (Figure 6-3).

Figure 6-3. Sensitive Receptors surrounding Buck Combined Cycle Plant

6.3 Race and Ethnicity

6.3.1 Rowan County

According to the 2010 US Census Data QT-P3, Race and Hispanic Origin: 2010; 2010 Census Summary File 1 report, the largest population within census tract 507 was White, with a population of 3,125 (58.3% of the total census tract population). The largest minority population within census tract 507 was Hispanic or Latino (of any race) with a population of 291 (9.1% of the total census tract population). Other populations above 1% within census tract 507 were Asian, Two or more races, Other Hispanic or Latino, Some other race, Mexican, and Black or African American (Table 6-1). The largest population within census tract 508 was Black or African American, with a population of 2,021 (71.3% of the total census tract population). Other populations above 1% within census tract 508 were Other Hispanic or Latino, Some other race, Mexican, Two or more races, Hispanic or Latino (of any race), and White. In census tract 509.01, the largest population was White, consisting of 3,806 individuals (92% of the total census tract population). The largest minority population within census tract 509.01 was Black or African American, with a population of 188 (4.5% of the total census tract population). Populations above 1% within census tract 509.01 were Some other race, Two or more races, Hispanic or Latino (of any race), and Mexican (Table 6-1).

6.3.2 Davidson County

Between 3.0% and 4.1% of Davidson County's population lives within census tracts 617.03, 618.04, and 617.02. The largest population within census tract 617.02 was White, with a population of 6,298, making up 93.6% of the total census tract population. The largest minority population within census tract 617.02 was Hispanic or Latino (of any race) with a population of 175 and a percentage of 2.6. Some other race, Two or more races, Mexican, Black or African American, and Hispanic or Latino (of any race) were the other populations consisting of 1% or more of the population of census tract 617.02. In census tract 617.03, the largest population was White, with 4,111 individuals (94.5% of the total population). The largest minority population within census tract 617.03 was Hispanic or Latino (of any race) with a population of 181 and a percentage of 4.2. Other populations above 1.0% in census tract 617.03 were Two or more races, Black or African American, Some other race, Mexican, Hispanic or Latino (of any race). The largest population within census tract 618.04 was White, with a population of 6,114 (93.5% of the total census tract population). Within census tract 618.04, the largest minority population was Hispanic or Latino (of any race), with a population of 129 (2.0% of the total census tract population). Other populations above 1% were Some other race, Mexican, and Black or African American (Table 6-1).

6.3.3 Project Area

Within one-and-one-half-miles of the Buck Combined Cycle Plant, there was a total residential population of 1,142. The largest population was White, with a population of 1,014, or 89%. The largest minority population within the one-and-one-half-mile radius was Black or African American, with a population of 72, or 6.0% (Table 6-1). Populations above 1% within one-and-one-half-miles of the Buck Combined Cycle Plant consisted of American Indian or Alaska Native, Asian, Two or more races, Some other race, and Hispanic or Latino (of any race).

Within census tracts 507 and 508, the Black or African American populations of 32.7% and 71.3% (respectively) were greater than 10% of Rowan County's overall Black or African American population of 16.2%. However, within one-and-one-half-miles of the Buck Combined Cycle Plant, the Black or African American population was only 7 individuals. Census tract 507 had more than a 10% difference in comparison to the county average for Hispanic or Latino (of any race), but within the one-and-one-half-mile radius, the Hispanic or Latino (of any race) population made up only 4% of the community. Census tract 617.02, as well as the one-and-one-half-mile project area had an estimated 10% above the county average for American Indian or Alaska Native.

6.4 Age and Sex

Table 6-2 was completed using data from Census Table QT-P1, Age Groups and Sex: 2010 for Rowan County, Davidson County and surrounding census tracts. Within Rowan and Davidson County, the highest population by age was the 18 and 64-year range at 61.8%. Within this age group, in both Rowan and Davidson Counties, males outnumbered females by 2.1% and 1%, respectively. Within both Rowan and Davidson Counties, the age range of 18 and 64 was the largest population for all census tracts (507, 508, 509.01, 617.03, 617.02, and 618.04).

6.4.1 Rowan County

Within census tract 508 of Rowan County, the under 5-year population of both sexes, the under 18-year population of both sexes, and the 65 years and over were more than 10% compared to the county average. Census tract 509.01 of Rowan County had a population of 65 years and over for both sexes that were more than 10% compared to the county average.

6.4.2 Davidson County

Within census tracts 617.02 and 618.04 of Davidson County, the 18 to 64-year population of both sexes had a greater than 10% when compared to the county average population.

6.4.3 Project Area

Within the one-and-one-half-mile area around the Buck Combined Cycle Plant, there was an estimated percentage above county average for Rowan and Davidson Counties for the 18 to 64-year population.

Table 6-2. U.S. Census Bureau, Age and Sex –

*Bold and highlighted cells indicate a difference that is greater than 10% when compared to the County.

6.5 Disability

Table 6-3 was completed using data from Census Table S1810, Disability Characteristics: for Rowan County, Davidson County and surrounding census tracts.

6.5.1 Rowan County

Within census tract 508 of Rowan County, there was above 10% of the county average for populations with disabilities between 18 and 65-years of age as well as among the American Indian and Alaska Native population (Table 6-3).

6.5.2 Davidson County

Within census tracts 617.02 and 618.04 of Davidson County, noninstitutionalized populations were found to be above 10% of the county average. Total civilian noninstitutionalized population were more than 10% than the county average in census tract 617.02. Also within census tract 617.02, populations of under 5-years of age, male, Black or African American, and Hispanic or Latino were identified to have a higher percent of disabilities than the county average. Populations between 5 and 17-years of age, female, Black or African American, and Two or more races were estimated in census tract 618.04 of Davidson County to have more than 10% than county average for disabilities.

6.5.3 Project Area

No disability data is available for the one-and-one-half-miles surrounding the Buck Combined Cycle Plant.

6.6 Poverty

The following tables (Table 6-4 and 6-5) were completed using data from Census Table S1701, Poverty Status in the Past 12 Months, 2012-2016 American Community Survey 5-Year Estimates for Rowan and Davidson Counties, as well as surrounding census tracts. Potential environmental justice populations would include, but are not limited to, high minority, non-English speaking, and/or low-income populations. Rowan and Davidson Counties had an estimate of 18% and 16%, respectively, of populations within the county below the poverty level.

6.6.1 Rowan County

Within census tract 507 of Rowan County, 23.5% of the population was below the poverty level (Table 6-4). Of the 23.5%, 42.9% were children below the age of 18. Other populations below the poverty level were male, female, Asian, Two or more races, Hispanic or Latino, and Some other race. Within census tract 508, an estimated 30.7% of the census tract was below the poverty level. Of the 30.7 percent, 49.9% were children below the age of 18. Other populations below the poverty line were male, female, White, Black or African American, Hispanic or Latino, Some other race, American Indian and Alaska Native, and Two or more races.

6.6.2 Davidson County

Within census tract 617.02 of Davidson County, 17% of the population was below the poverty level (Table 6-5). Of those living below the poverty level, individuals identifying as White, American Indian, and Black or African American were identified as more than five times the county average. Seventeen percent of census tract 617.03 were reported to live below the poverty level. Of those living below poverty within census tract 617.03, individuals between the age of 18 and 64 years, male, and Hispanic and Latino were identified as groups at more than five times the county average. Within census tract 618.04, 13.9% of the population were determined to live below the poverty level. The groups which identified at greater than five percent the county average for poverty were under 18 years of age and Two or more races (Table 6-5).

EJSCREEN analysis does not report poverty status for the one-and-one-half-mile radius area.

6.7 Household Income

Table 6-6 was completed using data from Census Table S1901, Income in the Past 12 Months (In 2016 Inflation-Adjusted Dollars) 2012-2016 American Community Survey 5-Year Estimates for Rowan and Davidson Counties, surrounding census tracts and the one-and-one-half-mile radius.

6.7.1 Rowan County

Within Rowan County, census tract 507 reported a mean income of \$42,434, which is slightly lower than the county average of \$44,494. Income ranges between \$15,000 and \$24,999, as well as \$50,000 to \$74,999 were found to be more than 10% than the county average (Table 6-6). Census tract 508 had 10% above the county average for household income below \$25,000. The median income for the census tract is \$23,375. Census tract 509.01 had 10% above the county average for households with an income between \$35,000 and \$49,000, as well as \$75,000 to \$99,999. The median income for the census tract is \$54,079.

6.7.2 Davidson County

Within Davidson County, census tract 617.02 was reported with an estimated range of households with incomes less than \$10,000, as well as between \$15,000 and \$25,999 were found to be more than 10 percent the county average within the census tract. Census tract 617.03 appears to have 10 percent above the county average for households that have an income between \$35,000 and \$74,999, as well as \$100,000 and \$149,999. The median income for the census tract is \$50,298. Census tract 618.04 appears to have 10 percent above the county average for households that have an income between \$10,000 and \$14,999, \$50,000 and \$74,999, \$100,000 and \$149,999, and \$200,000 and more. The median income for the census tract is \$55,392.

Within census tracts 508 and 617.02, there was an above average concentration of populations with household incomes less than \$10,000. Of the mentioned census tracts, the median incomes were estimated at \$23,375 and \$20,164, respectively. Within one-and-one-half-mile radius of the Buck Combined Cycle Plant contains 10% above the county average for households were in an income range between \$25,000 and \$49,999, as well as 31.0% with an income above \$75,000.

Source: US Census Bureau, 2011-2015 American Community Survey 5-Year Estimates, Table B16001

Spanish, German, and Other Indo-European Languages were identified as potential languages the Department could encounter when engaging communities about the proposed permit. EJSCREEN did not identify limited English proficiencies within a one-and-one-half-mile radius of the Buck Combined Cycle Plant.

7 Field Reconnaissance

On February 5, 2018, DEQ staff Sarah Rice, Environmental Senior Specialist and Renee Kramer, Environmental Senior Specialist, visited the Buck Combined Cycle Plant and surrounding areas to corroborate the EPA EJScreen data within the one-and-a-half mile of the proposed beneficial reuse of impoundment ash. During the visit, Ms. Rice and Ms. Kramer identified the Buck Combined Cycle Plant, the proposed beneficial reuse area, the proposed transportation route, and potential local sensitive receptors is Section 6-2.

8 Discussion with Public Officials

On January 31, 2018, Mr. Aaron Church, Rowan County Manager, returned Ms. Rice's phone call regarding the request to discuss the air quality permit and environmental justice review. Upon discussion with Mr. Church, he requested to speak that moment and not of wait for additional NCDEQ staff. Ms. Rice mentioned that NCDEQ was currently going through the demographics of the Buck Combined Cycle Plant area and reviewing the application for the proposed beneficiation facility. Finally, Ms. Rice informed Mr. Church that NCDEQ is planning on holding a public hearing for the permit. Mr. Church did not provide any additional information but did request an email with the material.

On March 13, 2018, Ms. Rice left a voice mail with Mr. W. Lane Bailey, City of Salisbury City Manager summarizing the events to date and suggesting he call back with any questions. Mr. Bailey was also notified he would be receiving the public notice of the meeting via mail.

9 Traffic

In addition to Title VI and EPA Environmental Justice demographic review considerations around the location of the permit, traffic impacts were also considered. The transportation route was analyzed to assess the potential impact on communities between the Buck Combined Cycle Plant facility and the major highway. The transportation route was assessed per North Carolina Department of Transportation guidance for identifying communities of concern. Communities were identified as Direct community impact areas (DCIA) and Demographically study areas (DSA)

9.1 Direct Community Impact Areas (DCIA)

The Direct Community Impact Area (DCIA) was determined to encompass a larger area than the project study area. The DCIA includes all properties that could be directly affected by the project transportation. The boundaries of the DCIA runs along natural features, parcel lines, roads, railroads, and other manmade boundaries where possible. The DCIA will not include commuting and detour routes. The DCIA should comprise roughly a 1000' buffer from centerline to each side. The DCIA polygon for this assessment comprises of the block group of which the transportation route falls within as shown in Figure 9-3.

9.2 Demographic Study Areas (DSA)

The bounds of the Demographic Study Area (DSA) are based on DCIA boundaries. The DSA generally represents all Block Groups that overlap with the DCIA and contains the population group for which demographic data will be analyzed. A block group should be left out of the DSA if: (1) the portion of the block group within the DCIA has no residents; or (2) the block group is within a military base. The surrounding block groups around the identified DCIA block group are composed of four block groups areas described further by west, east, south, and north of the DSA block group as shown in Figure 9-3.

Once the fly ash leaves the reactor of the STAR system, the product will be collected in the product recovery baghouse and pneumatically transferred to either the storage dome or the loadout silo, each equipped with a bin vent. The truck loadout station uses telescoping chutes and a negative pressure ventilation system to reduce fugitive emissions. The truck model used, similar

to the one shown in Figure 9-1, will be completely enclosed to provide further steps to reduce fugitive emissions along the transportation route.

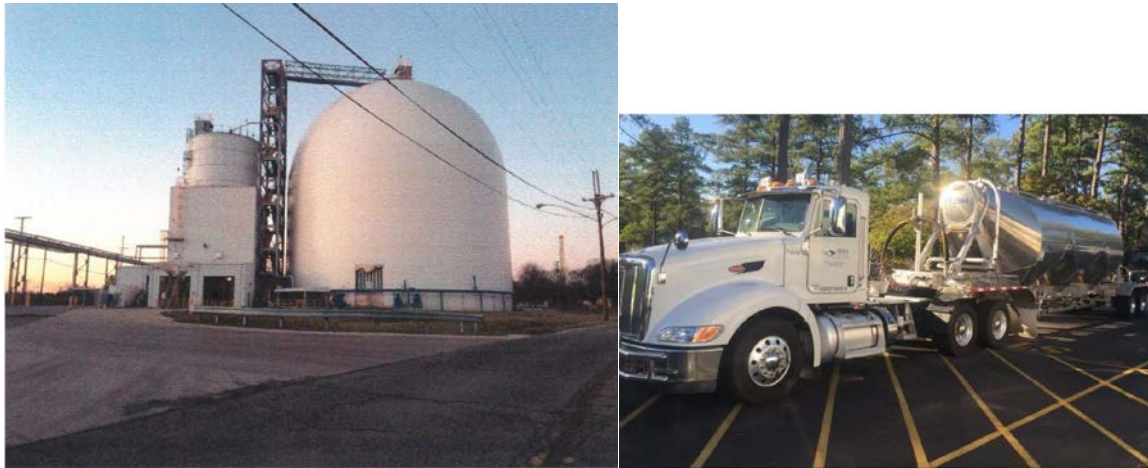

Figure 9-1. Pictures of the Proposed Facility (provided by Duke Energy)

The high-quality, class F fly ash will be the final product to be taken off-site via a newly created roadway paralleling the existing Dukeville Road to the west (Figure 9-2).

Figure 9-2. Proposed transportation route from the facility (provided by Duke Energy)

Along the transportation route, the direct community impact area (DCIA) and the census block west along the highway corridor exceeded the county average by more than 10% for the American Indian population. In addition, the demographic study area (DSA) census block west of the DCIA exceeded the county average by more than 10% for the Black or African American population. The census blocks west, south, and east of the DCIA estimates exceeded 10% of the county average for the 18 to 64 and 65 years and older ranges. The census block to the north of the DCIA exceeded more than 10% of the county average

only for the range between 18 and 64 years of age. Census blocks east, south, and north of the DCIA exceeded the county average for household incomes by 10% for \$75,000 and over. Most of the household incomes within the census block west of the DCIA exceeded the county average for household incomes by 10% for the income range \$25,000 to \$49,999. In addition, the same census block contained household incomes that exceeded the county average for below \$14,999 by over 10%.

10 Potential releases of fly ash to the environment

Potential migration pathways for fly ash and STAR system during the beneficiation reuse cycle include fugitive emission sources, Bituminous and Subbituminous Coal Combustion, Natural Gas Combustion, Liquefied Petroleum Gas Combustion, Gasoline & Diesel Industrial Engines, Unpaved Roads, Aggregate Handling and Storage Piles, and Industrial Wind Erosion.

Source of Emissions Factors: AP-42 Chapter	Emission Source(s)
1.1 Bituminous and Subbituminous Coal Combustion	FGD byproduct silo FGD absorbent silo EHE heat exchangers
1.4 Natural Gas Combustion	Low NOx burners firing natural gas during the STAR® system startup
1.5 Liquefied Petroleum Gas Combustion	Low NOx burners firing propane during the STAR® system startup
3.3 Gasoline & Diesel Industrial Engines	Screeener engine) Crusher engine
13.2-2 Unpaved Roads	Haul roads
13.2-4 Aggregate Handling and Storage Piles	Wet ash receiving Transfer of material to hopper Ash handing operations
13.2-5 Industrial Wind Erosion	Ash basin

10.1 Fugitive Emission Sources

Fly Ash Truck Unloading Options for the proposed facility include:

- Wet Ash Receiving - Transfer of fly ash to storage shed at a rate up to 70 short tons per hour (tph) and then transfer to the feed hopper by a front-end loader.
- Wet Ash Receiving – Transfer of fly ash to the feed hopper at a rate up to 70 tph.
- Wet Ash Receiving – Transfer to a 0.03-acre unloading storage pile and then transfer to the storage shed by a front-end loader.

Other Fugitive Fly Ash Sources could include:

- 67-Acre Ash Basin, or
- Ash Handling up to 49.1 tons per hour, or
- Haul Roads

11 Further Engagement

DEQ has determined further engagement was warranted:

- On March 13, 2018, NCDEQ sent the public notice of a meeting to the identified sensitive receptors, which included Bethel United Methodist Church, Yadkin Grove Baptist Church, Trading Ford Baptist Church, Bethamy Retirement Center, Hilltop Living Center. The public notice was also sent to the City of Salisbury City Manager and Mayor. These letters are shown in Appendix B.
- On March 14, 2018, NCDEQ communicated via email the public notice for the proposed project with the Executive Director of the Commission of Indian Affairs. The US Census Bureau data identified there was a probability of the presence of American Indians within the one-and-one-half-mile radius project area as well as the transportation route. DEQ reached out via email to the executive director of the NC Commission of Indian Affairs. Mr. Richardson, executive director, followed up with an email the same day forwarding the public notice to 41 local Native Americans consisting of members of the Commission, Individual Tribal Council, and others. The email correspondences are found in Appendix C.
- On March 15, 2018, NCDEQ developed and sent postcards to a residential community along the transportation route. The postcards summarized the proposed project, mentioned how the permit documents could be accessed, and when the public hearing was going to take place. A copy of the postcard can be found in Appendix D.

12 Next Steps

The NCDEQ – Division of Air Quality will send additional information as requested by the Rowan County Manager regarding the proposed recycle project.

13 Conclusion

The Buck Combined Cycle Plant is a 620-megawatt nominal capacity electric power generating facility located on the Yadkin River in Salisbury, Rowan County, N.C. It includes two fuel-efficient and clean burning combined cycle combustion turbine generators that burn natural gas to heat compressed air – which turns a turbine to generate electricity. These units recover heat from the exhaust gases to produce steam – which turns another turbine to produce additional electric power. This natural gas plant was placed into service in 2011 and is equipped with advanced emissions control. A selective catalytic reduction (SCR) unit reduces nitrogen oxide emissions and an oxidation catalyst minimizes carbon monoxide (CO) and VOC emissions.

The site originally began producing electricity in 1926 as a coal-fired steam station. However, all coal-fired units were retired in April 2013. The current natural gas plant is a cleaner source of energy with considerably lower emissions, including 92 percent less nitrogen oxides and nearly 100 percent less sulfur dioxide per unit of power generated than the former coal plant.

This report evaluated the results of the demographic and environmental conditions within one-and-one-half-miles of the Combined Cycle Plant to determine any disproportionately high or adverse environmental and human health effects on low-income or minority populations.

NCDEQ's assessment of potential impacts of the project have included:

- Review of a Permit Modification – Beneficiation Facility Expansion, onsite.
- Fugitive Emission Sources
- Point Source Emission Units
- Emissions from the STAR System
- Potential Emissions from the STAR System
- Regulatory Evaluation
- Compliance Assurance Monitoring
- Facility Wide Air Toxics
- Modeled Emissions Rates
- Facility Emissions Review

During the environmental justice assessment of the Division of Air Quality modification permit, DEQ determined it would hold a public hearing on April 10, 2018 at the North Rowan High School auditorium. Additional engagement as mentioned in Section 11 has been completed as determined during the assessment.

INCOME IN THE PAST 12 MONTHS (IN 2016 INFLATION-ADJUSTED DOLLARS)

2016 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Subject	Rowan County, North Carolina

Nonfamily income in the past 12 months	(X)	40.6%	(X)

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

While the 2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2016 American Community Survey 1-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An *** entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

S1810

DISABILITY CHARACTERISTICS

2016 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2016 American Community Survey 1-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

POVERTY STATUS IN THE PAST 12 MONTHS

2012-2016 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

S1701

POVERTY STATUS IN THE PAST 12 MONTHS

2012-2016 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013. For more information, see: Language User Note.

While the 2011-2015 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013. For more information, see: Language User Note.

While the 2011-2015 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2011-2015 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

2011-2015 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Estimate	Margin of Error
Speak English less than "very well"	0	+/-12

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013. For more information, see: Language User Note.

While the 2011-2015 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

SALISBURY, NC 28146

Dear Pastor Insley:

Your community of worship serves residents that may live within the vicinity of a nearby proposed coal ash recycle project. Duke Energy has submitted an application to the N.C. Department of Environmental Quality – Division of Air Quality to construct and operate a fly ash processing facility consisting of a Staged Turbulent Air Reactor (STAR®) plant at the Buck Combined Cycle Facility in Salisbury, NC. The proposed facility is designed to annually process up to 400,000 tons of coal combustion fly ash with other ingredient materials to produce a high-quality class F fly ash (a low carbon material) for use in ready mix concrete or other commercial products. The low carbon material meets the American Society for Testing and Materials (ASTM) Standard C618-08. A state-issued Title V Air Quality permit will be required to operate the STAR plant. The Air Quality permit will include all emission limitations applicable to the STAR operation and any necessary air pollution control equipment required to meet those emission limits. It will also include monitoring, recordkeeping and reporting requirements designed to assure compliance with the applicable emission limitations.

A Notice of Public Hearing and Opportunity for Public Comment is open to any residents that would like to participate. A copy has been included for your use. The Public hearing will be held at the ***North Rowan High School Auditorium on April 10, 2018 at 7:00 p.m.*** located at 300 N. Whitehead Avenue, Spencer, NC 28159. DEQ looks forward to seeing you there. You are invited to review application documents, as well as submit written comments or present oral or written comments

at the Public Hearing. Persons wishing to present oral comments at the hearing should prepare to present for 3 minutes or less.

The 30-day public comment period will run from March 14 through April 14, 2018.

Should you or anyone have any questions, feel free to contact me at 919-707-8287 or at sarah.rice@ncdenr.gov .

Sincerely,

Sarah Rice

**NOTICE FOR PUBLIC HEARING
PRELIMINARY DETERMINATION REGARDING APPROVAL OF
AN AIR PERMIT APPLICATION FOR
Duke Energy Carolinas, LLC - Buck Combined Cycle Facility**

Duke Energy Carolinas, LLC - Buck Combined Cycle Facility has applied to the North Carolina Department of Environmental Quality, Division of Air Quality for a proposed coal ash beneficiation project at:

1385 Dukeville Road
Salisbury, NC 28146
Rowan County

Duke Energy Carolinas, LLC - Buck Combined Cycle Facility's application for a proposed coal ash beneficiation project was reviewed by the Division of Air Quality, Raleigh Central Office to determine compliance with the requirements of the North Carolina Environment Management Commission air pollution regulations. The results of that review led to the preliminary determination that the project could be approved and the Division of Air Quality permit could be issued, if certain permit conditions are met.

This notice serves as a Notice of Public Hearing and Opportunity for Public Comment pursuant to North Carolina General Statute 130A-309.203(b) for this proposal. The Public hearing will be held at the North Rowan High School Auditorium on April 10, 2018 at 7:00 p.m. located at 300 N. Whitehead Avenue, Spencer, NC 28159.

A copy of all data and the application submitted by Duke Energy Carolinas, LLC - Buck Combined Cycle Facility and other material used by the Division of Air Quality in making this preliminary determination are available for public inspection during normal business hours at the following

NC DEQ		Mooresville Regional Office
Division of Air Quality	or	610 East Center Avenue, Suite
Air Permits Section		301
217 West Jones Street, Suite 4000		Mooresville, NC 28115
Raleigh, NC 27603		

Information on the permit application and staff review are available by writing or calling:

William D. Willets, P.E. or Kevin Godwin
NC DEQ
Division of Air Quality
1641 Mail Service Center
Raleigh, North Carolina 27699-1641
Telephone: 919-707-8400

Interested persons are invited to review these materials and submit written comments to Kevin Godwin at the above address or to present oral or written comments at the Public Hearing. Persons wishing to present oral comments at the hearing should prepare their presentation to be three minutes or less. The 30-day public comment period will run from March 9, 2018 through the close of the public hearing on April 10, 2018.

After weighing all relevant comments received and other available information on the project, the Division of Air Quality will act on the Duke Energy Carolinas, LLC - Buck Combined Cycle Facility application.

W. LANE BAILEY, CITY MANAGER
CITY OF SALISBURY
132 NORTH MAIN STREET
SALISBURY, NC 28144

Dear W. LANE BAILEY:

Some of your residents may live within the vicinity of a nearby proposed coal ash recycle project. Duke Energy has submitted an application to the N.C. Department of Environmental Quality – Division of Air Quality to construct and operate a fly ash processing facility consisting of a Staged Turbulent Air Reactor (STAR®) plant at the Buck Combined Cycle Facility in Salisbury, NC. The proposed facility is designed to annually process up to 400,000 tons of coal combustion fly ash with other ingredient materials to produce a high-quality class F fly ash (a low carbon material) for use in ready mix concrete or other commercial products. The low carbon material meets the American Society for Testing and Materials (ASTM) Standard C618-08. A state-issued Title V Air Quality permit will be required to operate the STAR plant. The Air Quality permit will include all emission limitations applicable to the STAR operation and any necessary air pollution control equipment required to meet those emission limits. It will also include monitoring, recordkeeping and reporting requirements designed to assure compliance with the applicable emission limitations.

A Notice of Public Hearing and Opportunity for Public Comment is open to any residents that would like to participate. A copy has been included for your use. The Public hearing will be held at the ***North Rowan High School Auditorium on April***

10, 2018 at 7:00 p.m. located at 300 N. Whitehead Avenue, Spencer, NC 28159. DEQ looks forward to seeing you there. You are invited to review application documents, as well as submit written comments or present oral or written comments at the Public Hearing. Persons wishing to present oral comments at the hearing should prepare to present for 3 minutes or less.

The 30-day public comment period will run from March 14 through April 14, 2018.

Should you or anyone have any questions, feel free to contact me at 919-707-8287 or at sarah.rice@ncdenr.gov .

Sincerely,

Sarah Rice

**NOTICE FOR PUBLIC HEARING
PRELIMINARY DETERMINATION REGARDING APPROVAL OF
AN AIR PERMIT APPLICATION FOR
Duke Energy Carolinas, LLC - Buck Combined Cycle Facility**

Duke Energy Carolinas, LLC - Buck Combined Cycle Facility has applied to the North Carolina Department of Environmental Quality, Division of Air Quality for a proposed coal ash beneficiation project at:

1385 Dukeville Road
Salisbury, NC 28146
Rowan County

Duke Energy Carolinas, LLC - Buck Combined Cycle Facility's application for a proposed coal ash beneficiation project was reviewed by the Division of Air Quality, Raleigh Central Office to determine compliance with the requirements of the North Carolina Environment Management Commission air pollution regulations. The results of that review led to the preliminary determination that the project could be approved and the Division of Air Quality permit could be issued, if certain permit conditions are met.

This notice serves as a Notice of Public Hearing and Opportunity for Public Comment pursuant to North Carolina General Statute 130A-309.203(b) for this proposal. The Public hearing will be held at the North Rowan High School Auditorium on April 10, 2018 at 7:00 p.m. located at 300 N. Whitehead Avenue, Spencer, NC 28159.

A copy of all data and the application submitted by Duke Energy Carolinas, LLC - Buck Combined Cycle Facility and other material used by the Division of Air Quality in making this preliminary determination are available for public inspection during normal business hours at the following

NC DEQ		Mooresville Regional Office
Division of Air Quality	or	610 East Center Avenue, Suite
Air Permits Section		301
217 West Jones Street, Suite 4000		Mooresville, NC 28115
Raleigh, NC 27603		

Information on the permit application and staff review are available by writing or calling:

William D. Willets, P.E. or Kevin Godwin
NC DEQ
Division of Air Quality

Coal Ash Beneficiation Project Proposed Near your Community

Your community is along the traffic route of a nearby proposed coal ash recycle project. Duke Energy wants to construct and operate the facility south of its Buck Combined Cycle Facility in Salisbury, NC.

Duke Energy is proposing to install and operate a fly ash processing facility consisting of a Staged Turbulent Air Reactor (STAR®) plant. The proposed facility is designed to annually process up to 400,000 tons of coal combustion fly ash with other ingredient materials to produce a high-quality class F fly ash (a low carbon material) for use in ready mix concrete or other commercial products. The low carbon material meets the American Society for Testing and Materials (ASTM) Standard C618-08.

A state-issued Title V Air Quality permit will be required to operate the STAR plant. The Air Quality permit will include all emission limitations applicable to the STAR operation and any necessary air pollution control equipment required to meet those emission limits. It will also include monitoring, recordkeeping and reporting requirements designed to assure compliance with the applicable emission limitations.

This postcard also serves as a Notice of Public Hearing and Opportunity for Public Comment. The Public hearing will be held at the **North Rowan High School Auditorium on April 10, 2018 at 7:00 p.m.** located at 300 N. Whitehead Avenue, Spencer, NC 28159. DEQ looks forward to seeing you there.

You are invited to review application documents, as well as submit written comments or present oral or written comments at the Public Hearing. Persons wishing to present oral comments at the hearing should prepare to present for 3 minutes or less.

The 30-day public comment period will run from March 14 through April 14, 2018.
