Dear Coal Ash Comment Administrator North Carolina DEQ,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Erin Malec

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

When Hurricane Florence dumped 30+ inches of rain inland, hog lagoons, sewage, dead chickens, and coal ash floated downstream to pollute coastal waters. An aerial photo showed a black plume of sludge streaming out Beaufort Inlet. Keep the pollution away from Beaufort. We couldn't swim, nor let our pets in the water, and we couldn't eat seafood. DEQ should set toxic rate limits for Coal Ash at the level that really kills fish. And contain Coal Ash away from water.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ralph Warner

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. They should do this I'm mediately.

Regards,
Viv Graves

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I'll write my own statement instead of the automated response, because I'd like to highlight a few issues surrounding this, aside from the obvious.

Firstly I'd like to say that it is obscene that we 'have' to bring this up and it is not being made a mandatory task. The North Carolina Utilities Commission has disgraced itself by allowing a business to front the bill of their problems, their mishandlings, and their carelessness to its consumers. We did not tell Duke Energy not to maintain their operations. We did not ask them to confront the NCUC and demand we pay for their screwups. The only thing we have done is pay our bills accordingly. I don't understand how a company receives a tax break greater than the suggested amount for cleanup, and has an increase in net worths and somehow our gatekeepers at the NCUC believes we should front the bill. Its ridiculous. Now, they still have multiple sites that are under question and we 'have' to make a big deal out of this instead of it being mandatory. What is everyone going to do? Wait until we have another major contamination, and once again just front the bill to the people not responsible? How much more does the public have to pay for a million dollar companies' mishandlings? DEQ members, don't be another let down to this state, we've already been shown disappointment once from the NCUC, we don't need another group following suit.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ann Furey

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
M.L. Rhodes
6917 Guy-Johnson Ln
Raleigh, NC 27603

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I request that Duke remove the coal ash from the Marshall Steam Plant along with the other locations that they are currently operating! It is horrible that they have been allowed to pollute our beautiful waterways and land for decades!!! If the North Carolina State cares at all about it's citizens it will get Duke to clean up the mess!

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Tricia Altic

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Laura Gottlieb

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

Living in one of the coves that the coal ash / sediment has spread into. It's extremely important to me and my family that this gets cleaned up. I also feel that the our county knows more than what they have to done to protect us. We have supporting evidence that NCDEQ, DEQ and Iredell County has let things slip through the cracks.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Ana Mishr

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I went to the first meeting tonight at Walnut Cove Elementary. The meeting design was not conducive for citizens to be heard. The poster set up did not encourage dialogue and I was not able to speak to any of the experts at each poster. My voice was not heard. I hope DEQ and NC will hear this email loud and clear.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I attended the session tonight at Walnut Cove. I was tremendously disappointed in the format as no one other than the presenter had an opportunity to speak or provide input. The format for the other sessions should be changed to give those who attend an opportunity to speak.

I have studied the coal ash issue, and I strongly feel that the North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Currently, Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not cover-up!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. We moved here from Ohio for a better quality of life for our children, we need to live in a safe, clean environment and it is Duke Energy's responsibility to provide that in the area that so many of us live in around their plants and on the Lake. It is crazy to me to even fathom that a company would not clean up their toxic mess that they have created. Where is the conscience and accountability? I pray that you hear the pleas of the community and rectify this.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Deborah Scheller

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Naomi Williams
239 Bayberry Creek Cir
Mooresville, NC 28117

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Veronica Robertie

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater!

We moved to Mooresville just over 3 years ago and had no idea about the environmental conditions here! Since then we have watched friends and countless community members become unexplainably sick - some teenagers and younger! Our rates of cancer in this area are higher than “average.” This is not a coincidence!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we’re concerned about pollution from Duke Energy’s coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please DO SOMETHING to help our community and keep us safe!!

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Heather McDonough

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I am a resident of Mooresville, NC on Lake Norman. I currently serve on the Board of Directors of the Catawba Riverkeeper Foundation (CRF) and served for several years recently as the Board Chairperson. CRF is submitting its own comments; these are my own.

For the bulk of my career I was on the corporate headquarters staff of Northeast Utilities, so I am not your typical anti-utility environmentalist and I brought that balanced perspective to CRF. I've always felt that Duke Energy was a well-run company and have never given a second thought to the fact that our house is less than 6 miles from Duke's McGuire Nuclear Power Plant.

But we do have to wonder why Duke would advocate leaving its unlined, ground/surface water-polluting coal ash dump at its Marshall coal-burning plant on the banks of Lake Norman. True, they propose capping it with an impermeable layer that would theoretically prevent water from leaching toxic chemicals from the coal ash into nearby waters. That's a risky proposition particularly given the use of Lake Norman and numerous points downstream on the Catawba River and its impoundments for drinking water, including the City of Charlotte.

Let's not forget that it wasn't that long ago that Duke experienced a major fiasco at its Dan River coal-burning plant. There the collapse of a 48" drain pipe underneath the coal ash dump resulted in 39,000 tons of coal ash and 27 million gallons of polluted ash pond water flowing into the Dan River. This was the third largest coal ash incident in the US and resulted in fines and restitution of \$102 million after Duke pled guilty to nine charges of criminal negligence under the Federal Clean Water Act, the largest federal criminal fine in North Carolina history.

So, Duke has a less than stellar track record dealing with coal ash.

Duke is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. Yet, over the course of recent months Duke has suggested that its so-called cap-in-place solution at Marshall would alleviate the need to overcrowd Rt. 150 and other roads with a never-ending caravan of dump truck loads of coal ash headed to a proper geologic location and a modern engineered landfill. I suspect that nearby residents would much prefer to endure the traffic inconvenience than continuing water pollution from coal ash at Marshall or, worse yet, another Dan River fiasco. By the way why not move the coal ash out the same way the coal comes in...by rail?

Incidentally, Duke prides itself on recycling coal ash at other sites into environmentally harmless cementitious building products. Shouldn't at least partial recycling of coal ash at Marshall be pursued?

It's pretty clear why Duke wants to cap-in-place at Marshall...because it's the least costly option. That might be good for Duke ratepayers and shareholders, but not for the protection of water resources of the many communities around Lake Norman and downstream, including Charlotte drinking water customers.

If Duke doesn't offer to do the right thing the North Carolina Department of Environmental Quality (DEQ) should require Duke to either recycle or remove its coal ash from its leaking, unlined dumps on the banks of Lake Norman and move it to dry lined properly engineered storage at a suitable geologic location isolated from irreplaceable ground/surface water resources.

Respectfully submitted,
Ron Pfeffer
Mooresville, NC

Regards,
Ron Pfeffer

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Amanda Boyea

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

AS a Resident on Mayo Lake since 1990 when my parents built the house I live in now, we have enjoyed the recreational fishing, swimming and boating that the beautiful lake offers. My family and friends have visited the cove where the overflow creek dumps its coal ash tainted waters. We did NOT know exactly what we were looking at for years, only noticing that the cove near the plant had a milky tint to it and curious plant growth. As Google Earth evolved, I was able to see where the outflow was actually generated,,,, the coal ash collection pond! You can see for yourself where the Ash Pond flows out into the cove I mention. The other interesting satallite image of 12/2002 shows clearly the milky water tint in the cove. I certainly fear for the danger I have subjected my children, family and friends to as I look at this image. I do hope that this plant and Coal ash are shut down and cleaned up as soon as possible to prevent further damage to this incredible resource. I just hope it isn't too late.

Please see the Google Earth Shot above from the Mayo Plant and note the cove I mention. You can clearly see the milky tinted water coming from the creek on the other side of the tracks where the Ash Pond is located.

Look at it for Yourself on Google Earth and be sure to drag the date bar to 2002.

(I can't attach the screen shot of Google Earth showing the cove with the date stamp 12/2002. I will try again to send to you so you can see clearly.)

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Susan Showers

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Carol Morrow
151 Monarch Rd
Hendersonville, NC 28739

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

When Duke Power Co. started spreading coal ash around the Marshall Steam Station decades ago, the land used had numerous creeks, gullies, and drainage channels all leading into the Catawba River, which became Lake Norman after construction of the Cowans Ford Dam. Now that topography is nothing but a level forested woodland, with layer upon layer of coal ash obliterating the original landscape. But the water percolating through the ash layers still follows the old paths, only now laden with a toxic stew of heavy metals and other pollutants, all seeping slowly into Lake Norman. Duke Energy is slowly poisoning the lake and the groundwater, silently and stealthy, now and for all eternity unless the coal ash is removed.

You have a duty to protect the health and welfare of the citizens of this great state and you must compel Duke Energy to dig up the coal ash and store it in a safe location where it can do no more harm to our citizens and our environment.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

Clean water is at the core of a healthy existence for all of us. In a world with lots of opinions, this is something I believe we can all agree about.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina. Do the right thing at these sites as well.

There is always a cost to doing things “right”. In this case, the cost to doing it wrong could be much more significant.

Respectfully,

Marsha G LePew

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jan Slaven
6411 Amos Smith Rd

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways.

I currently live on the beautiful shores of Lake Norman across from Marshall Station. I look at the billowing smoke everyday.

We fulfilled a lifelong dream by purchasing an old lake cabin and making it our home for us and our 3 young kids. Our kids and us fish, swim, and enjoy Lake activities all Summer. We have a well water that draws water from the natural water table around the Lake. I work and live here, I hope to retire here and pass this on to my kids.

2017 Duke had 10.8 BILLION in gross revenue, 3 BILLION NET INCOME. The CEO was paid 21.4 Million dollar Salary.

Duke Energy wants to just cap in place a leaking and potentially catastrophic accident waiting to happen unlined Coal Ash pit directly on the shores of LKN. At minimum Duke should be moving all Coal Ash adjacent to the Waters of LKN to a Lined and Capped storage that will be safe for all of us.

This really should not be up for debate. They put this cost

For moving coal as to line out at 387

Million. Nothing compared

To their Billions in profit. Even doing the right thing by removing all the coal ash to lined storage, they put cost at 1 billion. Only a fraction of 1 years profits.

Who is accountable here? Who is accountable for the damage already done? Do we wait until another Dan River happens here?

How does their right to rake in billions in profits, become

More important than the Health and well being Everyone around these toxic waste pits?

You are trading Duke profits for the Lives and Health of us and Our Children and all generations that come after!

Please make them accountable or it's on you, and you become the Failure for Now and the Future!

Thanks for reading

Wade Spraberry

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Karen Iverson
711 Olive Ave SW

To Whom It May Concern ,

Please , Please help us in the efforts of the right thing for the Environment and the People of Lake Norman Area and All over NC.

The fact that we are in 2019 and we know this Coal Ash is a disaster to the Environment and the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get cleaned up

We ask you to make a clear message to Duke Energy . Clean it up . Haul the waste off to a unpopulated area outside of NC . Start Now and Fines should be immediately implemented

No Coal Ash should be left in NC .

Why in the world are US Companies Importing Millions of Tons of Coal Ash from India and Shipping across the Oceans . Apparently we have more than enough in NC alone .

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Loretta Jacobson

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

Listen folks,

I know y'all love North Carolina as much as I do. No two ways about it: we won the lottery just being here.

Don't you want your children to feel that way? If we pollute the water now, we're making our beloved home state into the next New Jersey or Michigan: a national joke.

Do you want postcards with fish wearing scuba gear like they got around Lake Michigan? Do you want rivers that catch fire like they got around Cleveland?

It's our responsibility to the property owners (our children) to maximize the value of the property. Anything less is gross mismanagement.

Feel free to contact me at any time if you have questions or concerns.

Sincerely,
Joshua William Booth
Property Manager
Free State of North Carolina

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Mary Huffman

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Melissa White

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Dear Governor Cooper and our state's Dept. of Environmental Quality:

I write as a proud Carolinian, mother, teacher, volunteer, writer and photographer to ask why our state would allow Duke Energy to continue to release its coal ash into our waters and soil. Duke is already guilty of the largest criminal fine in NC history with its third largest coal ash incident in our country. Every human knows that coal ash affects our drinking water and our recreational lands and lakes.

If the very North Carolina state department that exists to protect the health of our children and wildlife succumbs to this corporation's plea to "cap in place" its toxic waste at Marshall then I predict the word will leak out - to corporations considering relocating here and buyers/developers of waterfront real estate - that NC is becoming unhealthy to invest in. We must look ahead!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

North Carolina deserves to live. We have beauty, life, unique qualities that sustain us & fill us with pride. Our state is irreplaceable.
In short: I Love Calling North Carolina Home.

Please keep it safe for All living creatures. Our aquatic environment offshore remains (I think) undestroyed, to date. Our wildlife remain salvageable. Our trees and plants and natural wildlife still exist, mostly, in pieces, in various parts of the state.

If these wild systems are lost...they cannot be replaced. So my message is simple:
Respect Our World and its Inhabitants.
Repair what we can.
Give natural areas the peace & undisturbed balance they had before we "improved" them with modernization.
Respect Life.

Thank you.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Lorraine Oswald

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Geoffrey Abucewicz

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I am submitting comments because I believe that it is imperative that DEQ listen to ALL the communities that are impacted by the coal ash that is leaking. Every one of the sites that are to date not part of the coal ash removal need to be addressed.

Duke must NOT be permitted to leave the coal ash in place in unlined pits thus leaking toxins into the groundwater and waterways. While Duke has been required to remove coal ash from all of the sites in SC and 8 of them in NC- WHY would they not be required to remove it from these remaining sites?

I whole heartedly support the view that the unlined pits need to have the coal ash removed to dry lined storage. Waterways and groundwater are being contaminated and that is a deplorable state of affairs. DEQ- please do what is truly the right and just thing to do for all the communities that are effected by Duke's unfortunate treatment of coal ash in the past.

sincerely

Katherine Seligmann

To Whom It May Concern ,

Please help us by joining the efforts of the right thing for the Environment, the population of Lake Norman Area, and across the state of North Carolina.

The fact that it is now 2019 and we, along with Duke Energy, know this Coal Ash is a disaster not only to the Environment but also the People. Thyroid Cancer or any other Health Risk is NCDENR's responsibility to get it cleaned up immediately.

We ask you to send a very clear message to Duke Energy. Excavate the Coal Ash waste off of the properties and **dispose properly** in a rural area outside of North Carolina. The excavation should be started immediately and fines implemented immediately.

No Coal Ash should be left in North Carolina. No more excuses from Duke Energy!

Thanks,

Arden Drose

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I am a Registered Nurse, a Girl Scout volunteer, and a mom that enjoys exploring the beautiful state of North Carolina with my family. I never imagined that I would be regularly checking the North Carolina Department of Environmental Quality (DEQ) compliance and water contamination reports to make sure the shoreline or waterway I'm about to let twelve Daisy Girl Scouts or my own children discover, is not going to harm their health.

The fourteen coal-fired power plants in North Carolina produce 19.3 billion gallons of coal ash and account for more than a third of the state's greenhouse gas emissions. Communities surrounding these power plants, as well as those downstream of coal ash ponds, are at great risk of health consequences due to air and water pollution. Poor air quality causes long-term cardiovascular and respiratory disease. Lead and arsenic, among other toxic chemicals, have polluted water ways from these coal ash ponds and put entire communities at risk for life long and life threatening disease and illness.

Duke Energy has the ability to move coal ash to dry lined storage, away from waterways and groundwater. This action has been required of them in all its South Carolina sites, as well as eight sites in North Carolina. The DEQ needs to require Duke Energy to take this action on the remaining six sites in North Carolina for the health and safety of communities across this great state.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Angela Covington

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

How can your hearts and minds be closed on such an important issue that includes the health and future not only of the earth itself but peoples now and future generations including your very own. It's so easy to go with the crowd in doing wrong. Stand out and stand up for this Earth, this place and start making a new path towards stewardship that others too will follow and benefit from. L. Coplin

Hello. I attended the meeting on January 17, 2018 at Sherrill's Ford Elementary.

From the information presented there, the comments from the public, Department of Environmental Quality and the two elected officials is it clear that Duke Energy needs to remove the coal ash completely from its leaking, unlined pits. This needs to be done at not only the Duke Energy's Marshall Steam Station but at all of Duke Energy's coal ash pits throughout North Carolina and the country.

Also Duke Energy should be responsible for the entire clean-up and not allowed to pass the cost on to their customers. Duke's President and CEO, Lynn Good, makes **\$21.4 million a year**. When she originally was hired, she said that Duke's rate payers would not be responsible for the coal ash clean up cost. Perhaps she can forgo some of her enormous, over-bloated salary and apply it towards Duke's coal ash clean up. They created this entire mess.

Also in the meeting it was said that if the coal ash was moved elsewhere on the property, they would clear cut arces of land and forest. That is not necessary and once again, a poor plan of Duke Energy.

Sincerely,

Allana D'Andrea

p.s. Also as stated previously (<https://www.wral.com/editorial-consumers-shouldn-t-pay-for-duke-energy-s-coal-ash-bungles/17145391/>),

"As a regulated monopoly, Duke Energy has an obligation to produce reliable, affordable and safe power while still being guaranteed a reasonable profit for the company and its shareholders. When the company fails to meet one of the three obligations it has to its customers, it isn't the fault of the ratepayers, nor should it be their responsibility to pay."

In a March 12, 2014 letter to then Gov. Pat McCrory and the N.C. Department of Environmental Quality, Duke Energy CEO Lynn Good said, **"We have accepted responsibility for the Dan River ash discharge and have taken a number of immediate actions following the event. <https://www.justice.gov/opa/pr/duke-energy-subsiadiaries-plead-guilty-and-sentenced-pay-102-million-clean-water-act-crimes>**

A little more than a year later, as the company **pleaded guilty to nine criminal violations of the federal Clean Water Act** – four related to the Dan River spill – Good said: **"We are accountable for what happened at Dan River and have learned from this event."** " *Obviously, not!!!*

To Whom It May Concern,

DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. Duke Energy plans to leave its coal ash sitting in the groundwater at multiple sites, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup! The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen. Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. It is past time for DEQ to listen to the community—not Duke Energy's consultants—about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Furthermore, I do not feel the proposed "hybrid plan" goes far enough to correct the problem and protect our citizens from the toxic effects of the coal ash.

Sincerely,

Michael Mellow

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Stephanie Johnson

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

As a new resident of 3 years living on the lake within 1.5 miles of the ash ponds I go to bed every night wondering if I have brought harm to the very family that, as their father/husband have tried so hard to protect. The fear that I get when my newborn granddaughter needs to be bathed or needs water for her formula. This is their lives and have only one life to live. How can this danger be taken so lightly. Something drastic has to be done. There is a responsibility that needs to be met. I cannot protect my family from forces beyond my control. They need a voice that my own cannot afford.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Howdy!

I was hoping to attend the meeting in Roxboro tonight, but since I'm not able to after all, I wanted to share a few short comments.

I only support **complete excavation of coal ash at these sites across the state and removal to lined, above ground sites on Duke Energy property.** It's Duke Energy's responsibility to pay for that, NOT consumers!!

Thank you.

Peace and love for our beautiful Earth, Karen Bearden

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

THERE IS NO EXCUSE FOR THIS ENDANGERMENT TO OUR HEALTH AND OUR ENVIRONMENT HERE IN NORTH CAROLINA!!! I live in Charlotte, and I fear for the safety of all of us as long as nothing is done. DO SOMETHING NOW!

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Sally Thomas

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

I attended the open forum on the Duke Energy coal ash issue and want to go on record that I STRONGLY urge NC DEQ to accept only one option for the Hyco Lake Duke Cleanup:

Excavation of the coal ash to an on-site safe, dry lined landfill that sits well above the 100 year flood boundary.

Regards,
Pat Morris
A concerned Hyco Lake resident.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Subject: [External] Sierra Club Comments on the Roxboro Plant Coal Ash
Date: Monday, January 28, 2019 7:20:57 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Statement of the Headwaters Group of the Sierra Club On Coal Ash at the Roxboro Plant of Duke Energy Corporation

These comments are submitted on behalf of the over 1200 members of the Headwaters Group (Durham, Granville, Person and Vance Counties) of the North Carolina Chapter of the Sierra Club. The North Carolina Sierra Club and its allies have long advocated that coal ash stored in unlined pits next to waterways should be excavated and removed to lined storage away from water. In particular, DEQ should require Duke Energy to remove the known 38,193,810 tons of coal ash from its leaking, unlined pits at the Roxboro plant and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. However, Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, lakes, and rivers.

Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. Data recently released by Duke Energy showed concentrations of radioactivity in groundwater at Roxboro as much as 11 times the maximum contaminant level.

The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen. We need cleanup—not coverup!

It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely, Pat Carstensen, Chair, Headwaters Group of the Sierra Club

After researching all the options, we decided that the only option would be to construct a lined landfill on site to dispose of the coal ash.

We cannot figure out why this is even being discussed, since South Carolina and Virginia have both passed laws on this issue.

Subject: [External] Comments on coal ash at Hyco
Date: Monday, January 28, 2019 1:56:21 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

I attended the DEQ meeting at Person County High School on January 24th and wanted to follow up with some comments.

First and foremost, my biggest concern is any health risk that is associated with the coal ash and its leaching into our ground water and impacting the health and well-being of individuals in and around Hyco Lake. I have seen no data as to the impacts of the elements that are contaminating our water (arsenic, cobalt, lithium, etc). I'm sure there are medical/health risks to the community both now and longer term. This should be addressed so that the constituents of our community are made aware of the dangers.

Second, the Hyco facility should get the same treatment and remediation as is being conducted in South Carolina and Virginia. The coal ash needs to be removed and stored in lined containers. There is no other responsible option for our community.

Thank you for soliciting comments.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Pat Mugavero

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

I'm at the Cramer HS hearing in Belmont. My comments are:

- 1) Duke's proposed plan is not responsive in any way to the challenge. One doesn't 'cap' unlined pits.
- 2) to the maximum safe extent, coal ash should be recycled by encasing in cement bricks, concrete and other methods.
- 3) emulate the bipartisan solution negotiated by Virginia this past week. Excavate these unlined pits ASAP. Recycle at least 25% of the coal ash and move the remainder into double-lined landfills away from rivers, lakes and aquifers with monitored Leak Detection systems. The double-lining would include 2' of clay on the exterior with a durable lining impervious to water.
4. Storage of hazardous waste must be designed with the following priorities:
 - A. Safety always comes First.
 - B. Maintenance Second.

As the California utility PG&E is belatedly learning the hard way, profits will evaporate if Safety and Maintenance are ignored.

Have the state or local health departments conducted Cluster Analyses of cancers, epilepsy, asthma and other indicators of residents near these unlined coal ash pits, comparing in each indicator the incidence rate compared to the general population?

To Department of Environmental Quality.

I understand that you plan to “Cap in Place” six coal ash sites, where the coal ash is leaking into the rivers that provide drinking water. Duke wants this, saying it’s cheaper. These people, often in communities where people have already been dying of coal ash poisoning, deserve to have the coal ash excavated and taken back to Duke. Namely, Goldsboro and Belews Creek, but more deaths will come if you don’t take care of people first.

Of course, there is now a viable option, of using the method of making building materials out of the coal ash, without having to re-burn it. Check out the discovery at A&T University in Greensboro. Re-burning it for cement is toxic, too. Enough of this poison. Let Duke have it. Don’t do what Duke wants. They don’t care about people dying. Think of all those 37 institutions, mostly religious, which are shareholders and urged Duke to clean up after the hurricanes, and be sure not to harm the people living near these sites. Let Duke lose its investors big time. You take care of us citizens and stop poisoning us. Landfills leak, too, but if you put them on Duke property away from people and rivers, maybe Duke will learn something finally.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Michelle Lee

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. The state of Virginia has taken action and is going to be definitely doing this work and more efforts will be used to clean up and out four sites of coal ash across the Dominion.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections. It is the only and safest choice now.

Thank you and with best

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I cannot comprehend why a company that is as community oriented as Duke Energy - which gives away literally millions of dollars to community, education, and environmental causes - fails to take this on. Maybe all the different parties affected by the heavy metal pollution contained in coal ash should apply for Powerful Communities grants... and use the money to hire professionals to clean this mess up. Or...

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities. Communities of color and low income communities are often hit the hardest. This is an environmental justice issue to be sure. It is high time to own up to these facts. People living near coal ash sites cannot depend on their water for drinking, bathing, gardening, and normal household activities. Those down stream and in lower water table areas are at risk as well. Coal mining, burning, and disposal is dirty business, and there are cleaner technologies for energy going forward. There are clean methods of dealing with waste, but cap in place is not one of them!

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Subject: [External] Coal ash impoundment closure options
Date: Tuesday, February 5, 2019 2:14:06 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

I attended the DEQ meeting on Roxboro Plant coal ash impoundment closure options, and I am responding to that meeting with my observations and comments:

1. Most people who spoke against coal ash ponds generally seemed more angry at Duke Energy more than DEQ. But no one mentioned that it was a DEQ fellow who sent “do not drink” letters to hundreds of people across NC who use wells for drinking water, based on limits for several toxic elements which he had made up without ANY established basis. Most of those folks are uneducated in your areas of expertise and appeared to be affected by a “fear of the unknown”, not actual health risks from toxicity.
2. No one mentioned the subsequent study by Duke University that was published in the peer-reviewed journal ***Environmental Science and Technology Letters***. “When combined with previous research, there is overwhelming evidence that coal ash basins are not impacting water quality in neighbor wells.” Has there been any new evidence that changed this finding? If not, DEQ should “come clean” and tell ALL recipients of a “do not drink” letter that this was a mistake, and that DEQ no longer sees any reason for Duke Energy to supply drinking water or special filtration to letter recipients.
3. Since I live off Shore Rd near the Roxboro plant, I already share the roads in that vicinity with many large flat-bed trucks (from the Certainteed plant), and with 20-ton dump trucks each day. Moving a substantial quantity (35 million tons??) of coal ash from one site to another by truck seems like a foolish and unnecessary exercise, when there is **STILL** no evidence that wells near the existing ash ponds are any worse than wells located miles away from the ponds.
4. Hence, there are essentially NO benefits to moving millions of tons of ash. However, there would be significant detriment to the roads, to fellow drivers, and to homeowners along truck routes from road damage, noise, congestion, and air pollution created by the hundreds of truckloads per day for many years needed to move such massive quantities of ash. **Please DON'T require Duke Energy to remove the coal ash! Leave it right where it is, and keep it covered.**

Dear DEQ,

I'm writing about the Roxboro Plant and my environmental concerns. Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever. DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials.

Sincerely,
Emmy Grace

RE: Statement Regarding Duke Energy's Final Closure Plans for Coal Ash Impoundments

I moved to North Carolina in 2014 from Tennessee, where I witnessed the immediate aftermath of the largest coal ash disaster in the United States in late 2008. As a researcher, I spent a lot of time speaking with residents and workers impacted by the Tennessee Valley Authority spill. Had the disaster occurred during the day time, it could have been deadly for residents and the agency had opportunities to prevent the disaster prior to the spill by moving the ash to a lined, dry landfill, but the agency chose the cheapest route to address previous problems in the impoundment. In the long-run, the disaster cost much more than it would have cost to convert the impoundment to a lined landfill. The costs were not just felt by TVA, but by the community, especially those who were displaced, those who experienced devalued property, and those who fear the long-term health outcomes. DEQ and Duke Energy have the opportunity to make the right decision for everyone and to prevent future disasters, spills and leaks. **DEQ should require Duke Energy to remove its coal ash from its leaking, unlined impoundments and move it to dry lined storage.** This is what the community wants and it is the best choice for people, the environment, and water systems.

To whom it may concern,

Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever. DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. Duke Energy plans to leave its coal ash sitting in the groundwater at the plant, where it will keep polluting our groundwater, streams, and rivers. We need cleanup—not coverup! The hybrid solution still leaves coal ash in the ground to keep polluting groundwater. The community has come out time after time over the last several years, making clear that we’re concerned about pollution from Duke Energy’s coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.

+ Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion’s unlined sites—our families and our community deserve the same protections. Duke Energy has a dry, lined ash landfill on its property that is already permitted to hold all the ash from its leaking pond(s) and will hold all the ash on the site. Ash will not travel through the community or to other communities. None of these plans will have a significant increase in trucking, but only excavation will remove the source of the water pollution. Duke Energy’s own experts know that even cap in place will involve trucking construction materials to the site—just like any other construction project. The hybrid alternative still leaves ash in contact with ground water. We need cleanup—not coverup!

Sincerely,
Thomas Huzij

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- Lies at an elevation greater than 424' above sea level; and
- Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

On behalf of friends who have well water whose water supply (near the Lake Wylie and Catawba River) is significantly compromised by the active coal ash and ash basins near them, I am reaching out to ask for a complete cleanup of these toxic sources. No one wants to bathe, drink or be exposed to toxic levels of chemicals that are known cancer-causing agents. SC and VA have REQUIRED all coal ash to be removed. The fact that NC is just haphazardly risking the lives of those near active coal ash sites is completely unacceptable and embarrassing as a state.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Please take this feedback into consideration - do a complete cleanup of coal ash in NC so that we do not have to fear for the health of those living in proximity to these sources.

Regards,
Rebecca Lewis

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, I wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

1. Lies at an elevation greater than 424' above sea level; and
2. Sits 10 - 12' or more above the average water table level

This request is based on my email conversation which resulted in projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

The current state standard of only requiring the ash pit to be 5 feet above the average water table is not sufficient when the ash pit is adjacent to a lake with a fixed dam

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
William Doom
919 Lake Drive W

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Mark Henson

Surely, a total of zero people think that leaving coal ash in unlined pits is a good idea for the health of our state and its citizens. It was NEVER a good idea to store this toxic waste in this manner, and it should never have been permitted to begin. Duke should be required to clean up its own mess onsite without inflating the "costs" of what it should have done in the first place.

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.

Force Duke to do the right thing.

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Lawrence Turk, RN

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Kathryn Wolfe

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Vanessa Carroll

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Elaine Lite

Subject: Public Comment needed! Coal Ash Pits near Hyco Lake

Dear Hyco Lake Neighbors and Friends:

The North Carolina Department of Environmental Quality (NC DEQ) is accepting public comment on plans, submitted by Duke Energy, for dealing with coal ash pits at the Roxboro Plant. These pits are located adjacent to Hyco Lake and need to be cleaned up.

After attending a public information meeting in January and following up with questions, several Hyco residents have drafted the following letter which outlines our interests in having in having the coal ash moved to safer, elevated pits. This would move the ash further away from the water table and at a higher elevation to avoid contamination of the lake in case of heavy flooding.

Comments made now will be used by NCDEQ as they work with Duke Energy on a final plan.

The deadline for submitting public comment is this Friday, February 15, 2019.

It is important that NCDEQ hear from as many local residents and business owners as possible so I encourage you to make use of the sample letter (below and attached) and ask you to forward this e-mail to neighbors and friends.

Additional information and “talking points” from the January 24th public meeting are included in the attachment as well.

Comments should be e-mailed to NCDEQ at Roxborocomments@ncdenr.gov

Thank you for your help!

SAMPLE LETTER - submit to Roxborocomments@ncdenr.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy’s Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- <!--[if !supportLists]-->1) <!--[endif]-->Lies at an elevation greater than 424’ above sea level; and
- <!--[if !supportLists]-->2) <!--[endif]-->Sits 10 - 12’ or more above the average water table level

This request is based on projections provided by NCDEQ’s Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30”), the surface level of the lake would be at 423.3’ and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the “near miss” from Hurricane Florence which dumped between 21” and 33” in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

NC DEQ decision makers,

I am writing to weigh in on the closure of the coal ash site referenced above. I have family and friends living in Person County who depend on the water resources in this area and want them to be safe. Although I am now merely a private citizen concerned about coal ash storage, as a previous staff member at Clean Water for North Carolina, I spent many years researching coal ash contamination. I know the threats that unlined ash basins can pose to public health and environmental quality, even when the water is drained and the basin is capped in place. I urge you not to allow capping in place of ash at this or any other site in North Carolina.

One aspect that concerns me is that the toxic metals and other compounds associated with coal ash would still be present without any liner after the basin is drained, and could therefore still leach into the nearby aquifer, affecting well water and surface water nearby. Please consider conducting your own independent analysis that identifies the safest closure option for the long-term protection of water supplies. This decision is so important for the health of the communities near this coal ash site, so I hope you will consider it carefully.

Sincerely,

Katie Hicks
Asheville, NC

Subject: [External] Coal Ash pits located adjacent to Hyco Lake controlled by Duke Energy Progress
Date: Tuesday, February 12, 2019 5:42:56 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

TO WHOM IT MAY CONCERN:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina. As a Hyco Lake homeowner, I am deeply concerned about the impacts that the existing pit or pits at the Duke Energy's Roxboro Plant could be having on the water table lying beneath the pit or pits as the standards that governed the construction of these areas only required a lining of gravel and clay without a top cap and without a storm water control plan. I have been told that storm water measures to control water and ash runoff have since been developed to prevent ash water from reaching the main body of water in Hyco Lake. I am worried about the economic and environmental risks the ash pit or pits might pose for the future of the lake and the surrounding area, if the coal ash is not cleaned up now and placed in an area of containment based upon the quality assurance of today's construction standards of this type of containment facility.

After reviewing the various options presented at the January 24, 2019 meeting, I wish to express my strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit. I would support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit: (1) Lies at an elevation greater than 424' above sea level and (2) Sits 10-12' or more above the average water table level. This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of potential maximum precipitation (30"), the surface level of the lake would be at 423.3" and the fact that the fixed dam provides no opportunity to release water other than flowing over the top of the primary dam or by an emergency spillway that is several feet higher than the primary dam.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21"-33" of rain in North Carolina, I believe this request for an elevated location is warranted. The decision to do this is of great importance and I am sure your decision will be in the best interest of the folks that reside and enjoy the beauty of the Hyco Lake area. Thank you for all you do to protect the interest of North Carolinians and the environment within which we enjoy.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. I, along with others, urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals - as has been in other North Carolina and South Carolina communities. Thank you for your consideration of my comments.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Wilbur Bond

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Joshua Lobe

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

P.S.

The very concept of having to tell a company not to spill and dump their waste in a way that it will devastate communities and the natural wildlife is baffling, having to them to cleanup after themselves when they have recklessly dumped their waste is even more baffling. Ignore statistics about profit margins, and remember families, children, parents, and entire communities who are all dragged down to the depths by the monstrous act of willful pollution.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Hope Dryden

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. Well, if you'd keep coal ash sealed in place, but when Hurricane Florence rained >30 inches in September, coal ash entered streams and stream sediments and rivers and floated as a plume of sludge to MY Newport River estuary and Beaufort Inlet, so I and my dog couldn't swim for months and I couldn't eat seafood. Coal Ash heavy metals scare me: arsenic, lead, mercury, cadmium, chromium, zinc, manganese, vanadium, molybdenum, nickel, iron, beryllium. CONTAIN THESE TOXICS, PLEASE!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Ms. Meredith Shelton

Subject: [External] Excavate Roxboro Coal Ash
Date: Wednesday, February 13, 2019 8:12:30 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Please excavate and remove the coal ash as the Roxboro Plant located in Person County on Hyco Lake, and place it in a lined landfill.

I have been to informational meetings and have reviewed much of the materials available on this topic. It is unacceptable to leave the ash in an unlined pit/pond with a cap. This is a dangerous environmental practice that could lead to the devastation of the area as both a growing recreational area and to the county residents that would be directly affected. Not removing the ash would condemn Person county as the location of a serious environmental problem that unlike other plant locations in NC was purposefully left that way.

On the basis of cost: If the ash is not removed the future cost could be human life, a serious decline in the area economy, and Person county, along with NC would be considered to have made a purposeful decision based on the short term convenience of a large utility.

On the basis of social justice: If the ash is not removed, then the rural population of areas of Person County would be negatively impacted with little ability to provide for their own remedy. For the more affluent visitors to the area, especially around the lake, many are from other areas of NC and are unaware of the nature of the status of the ash problem and the potential for it to remain on site unlined. I have personally spoken to many out of towners who are completely unaware. There has not been sufficient notice to property owners in the area whose residences are 2nd homes.

Potential for harm: Why have Virginia and South Carolina decided to landfill all coal ash and North Carolina not? Another black eye for our state increasing the potential for NC to become known even more as an environmental lagger.

Please remove/excavate the coal ash from the Roxboro plant to a lined landfill. Thank you,
Mary Mount, Person County resident.

Hello,

I am writing to give input on how coal ash sites are closed in NC.

I ask that there be a complete excavation at every site. While other techniques may be cheaper, they require monitoring and are more risky for NC residents. Other states are seeing the need to choose the most effective technique for protection of water and residents. I ask that NC DEQ also work to protect the people and water of our state by requiring complete excavation of the coal ash sites.

Thank you,

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

I live on Lake Norman near Marshall Steam Station and drink water from a well. So any coal ash incident which contaminated the ground water or spilled into the lake itself would have a terrible impact on my property, and the thousands of others who call the lake home. And the thousands more who may not live on the lake, but depend on the water table for safe drinking water for their family. Let's all say that we did not know the consequences of storing coal ash in unlined pits in the past. But we do now. Let's mandate that all coal ash in N.C. be placed in dry, lined pits away from waterways. And we, the taxpayers of North Carolina and customers of Duke Energy will bear the cost. We are responsible for the mess that we made and we owe it to our children and grandchildren to fix this and fix it in a manner that cannot impact them in the future.

I know there are arguments about storing the Marshall coal ash onsite or offsite. I will let people smarter than me decide that. But I ask you to require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

To whom it may concern:

Thank you for holding the public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, I wish to express my strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, I support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, I believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jill Thomas

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

How can this be anything but obvious? Coal ash is caustic and causes serious damage to waterways, and by extension, small businesses, tourism, animals, birds, fish, reptiles and people. When that ash got dumped into the Dan River, people were instructed not to touch it. If something is too caustic to even touch, what kind of damage is it doing to the ecosystem?!

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Cleaning up coal ash and keeping it out of our water is a cost of burning coal. If we want the market to allow the best and most cost effective ways of generating electricity to prevail in our economy, we can only have that when energy systems cover their own cost as they do business. How many bonuses and pay raises have Duke executives received from the proceeds of externalizing the real cost of dealing with their own waste? Prevention is nearly always cheaper than trying to clean up after a spill. Coal ash spills can never be completely cleaned up. The damage cannot be undone. Prevention is the only viable option for keeping our land, water, wildlife, and our wells safe. There is no excuse for not doing it.

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Ronnie Smith

To whom it may concern,
I believe that Duke Power should provide new water lines to all the homeowners and landowners effected by coal ash. Also, I think that Duke Power should partner with N.C. A &T State University to look at creative ways to reuse coal ash.

Thank you,
R. L. Johnson, Sr.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Barbara Parris

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Michael Weiss

Subject: [External] Coal Ash Pits at Hyco Lake
Date: Wednesday, February 13, 2019 9:31:02 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina. I am a homeowner with a home on Hyco Lake in Person county.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

As an engineer, my greatest concern is how coal ash ponds react during historic rain events as Climate change trends show an increasing rate of these events. We recently saw coal ash ponds over run their banks during the Tropical Storm & Hurricane events of Fall 2018. This overflow went directly into the watershed.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
ELIZABETH GRIFFITH

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

All this information you are aware of and yet continue to do nothing to Abate it. It is a crisis and it must be dealt with by you now instead of continuing to seep into our waterways and our bodies and poison us.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Debra Simons

We CANNOT have another disaster with coal ash waste polluting our streams and rivers. Coal Ash must be stored the MOST safe way possible. Being penny wise and pound foolish is not a smart economic stewardship of the Taxpayer's money.

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Ty Kays

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

Duke Energy has shown a complete disregard for their customers and fellow citizens by knowingly and willingly sacrificing our health and safety for extraordinary profits. Paying shareholder healthy dividends does not release you from the moral and ethical responsibility to safe guard your customers and the environment. Your callus approach to profits would make it appear that the company does not believe it can ethically conduct business and still be profitable which of course is not true. I has been demonstrated by more than a few companies that implementing a management philosophy that relies heavily on business ethics are proven to be more successful than those that operate in an unethical manner.

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to act in an ethical manner and remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater. It is DEQ's responsibility to protect the health and well being of all Carolinians so please do your job.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Jaedra Luke

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Lori Mann

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Martin Doherty

For long term groundwater and well user protection, and to help restore declining real estate values due to the presence of coal ash, **complete excavation of coal ash and removal to an onsite lined landfill is the only responsible closure option. Duke Energy claims that only Cap in Place (Option 5), which is completely unacceptable to the community,** could be completed by the Coal Ash Management Act (CAMA) deadline of 2029, but there is evidence that greater total volumes of ash have been excavated relatively quickly from several sites simultaneously and therefore this rate of removal could be replicated for this very large basin by requiring excavation to start this year.

This is how we feel. All the coalash needs to be taken up and moved to a lined landfill.

Thank you

Sylvester and Marilyn Jeffers

Duke created this problem, not their customers and should pay for the clean up, regardless of what it does to their stock prices. Perhaps those who were receiving huge dividends and making millions on stock options should be required to pay up as well. Duke has also been allowed to make Billions of dollars in sales of waterfront real estate through Crescent Land and Timber. I believe that ALL of this land should be the subject of a Federal Investigation as to whether Duke knowingly sold these parcels that are contaminated. A class action lawsuit may well be called for.

Dear NC DEQ,

Thank you for hosting the public comment meeting on January 24, 2019 in Roxboro. It was an informative meeting, but I left thinking that none of the options Duke provided are viable options in the long run. Even if Duke moves the coal ash to a dry lined pit, the liner membrane only has a life of 20 years. What happens to the groundwater after 20 years? My husband and I live in Raleigh but own a cottage on Hyco Lake and the safety of the groundwater, as well as the coal ash dust in the atmosphere are a real concern for us.

This is a public relations opportunity for Duke to get on the offense of Coal Ash Disposal, rather than consistently being on the defense for the past 30 years. Duke Energy should set a precedent that other energy companies across the country would want to follow. One of the ways Duke could do this is by providing a million dollar prize incentive to graduate engineering students at universities, for developing an environmentally safe way to dispose of coal ash by recycling it into some other environmentally safe product. Currently there are cement blocks and sheet rock products that are made from coal ash, but I think more products need to be developed, because too much coal ash is being generated in unlined pits.

I recognize that Duke Energy is a business and that security with their power grid holds a greater concern, but I think Duke Energy should look at coal ash disposal as a public relations opportunity. I would like to see this be a win-win for Duke and the surrounding communities, even if it means raising the rates (of those who benefitted from the power) to cover the costs of the disposal of the coal ash in the most environmentally responsible way.

Kind regards,
Elizabeth Doggett

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Excavation and Removal to new on-site landfill. This is the **ONLY** acceptable closure option for this basin, as it will reduce risk of groundwater contamination and impacts to quality of life, air quality, as well as greatly reduce danger and air emissions of truck traffic by carrying excavated ash to an onsite landfill.

Subject: [External] Water Quality Concerns - Hyco Lake
Date: Friday, February 15, 2019 8:10:03 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your serious efforts in addressing this potential water quality risk. This appears to not only be a concern here at Hyco Lake, but other communities as well.

Please give this proposed solution your consideration and support.

Thank you again.

Betty & Don York

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Elizabeth Freeman

Good morning-

My family has owned property at Hyco Lake for 25 years. It has come to my attention recently that Duke Energy is proposing to cap existing coal ash basins at the Roxboro Power Station, Hyco Lake, rather than excavate to on or off site dry land lined basins that would be more ecologically protective of the surrounding waters and environment.

I am disturbed that Duke Energy has not more readily made known to its customers affected by such a magnanimous decision of the proceedings leading to this decision. As a result I am highly skeptical of any conclusion drawn by a single source "on behalf of Duke Energy" as shown on the NCDEQ site to have been provided by Exponent.

I urge the NCDEQ to require both more independent research and more community awareness from Duke Energy before reaching a decision involving such long term implications and risk potential to the DE customers affected by this decision.

Sincerely,
Nicholas H Harris

Subject: [External] Coal Ash Pits near Hyco Lake
Date: Friday, February 15, 2019 11:30:09 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe

this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

Dear DEQ Staff,

Being a resident of Person County I am very concerned about the lack of safety with Duke's Coal Ash dumpsites. I feel our water safety and air quality are at risk for many decades to come. I feel people's health is at risk, especially children.

I feel the only reasonable action would be complete excavation and removal of all coal ash to a lined on-site landfill! Whatever this may cost Duke is fair and due to their negligence. "Negligence" is too polite. It is due to their outright greed and total disregard for people and planet.

I urge you to represent We the People, not corporate greed!

Thank you for your consideration,

Jeffrey Evensen
102 Elderberry Lane
Rougemont, NC 27572

PS You should fine Duke Energy many millions beyond the cost of proper handling of the coal ash to help people pay for their medical bills. Oh that's right I forgot. Duke Energy makes millions and gets people sick. Then Duke Hospital makes millions selling people treatments. Some business plan.

Subject: [External] Coal ash clean up at Hyco Lake
Date: Friday, February 15, 2019 3:26:46 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Thank you for having an open meeting where members of the community were able to ask questions and voice concerns about the coal ash stored near Hyco Lake. We love our beautiful lake and want to preserve the wild life and environment surrounding it.

After attending the meeting and listening to the information presented, it seems to me that removal of the existing ash ponds to a site that is lined and capped as well as where it is well above the ground water table and possible flooding levels, really is the only reasonable solution to insure that the lakes and streams are protected from contamination. The impact on the area's environment and economy would be astronomical if the ash is allowed to remain where it is now located and leaks into the groundwater and streams.

In summary I support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

I hope that NCDEQ and Duke Energy will chose the option of cleaning up existing ponds and storing all future ash in dry, lined ponds to keep our community and the environment safe.

Thank you

Mary Ann Henderson

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Martha Meeks

Subject: [External] Public Comment - Coal Ash at Roxboro Plant
Date: Friday, February 15, 2019 4:17:23 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Many thanks to the dedicated NCDEQ staff members who organized and attended the January 24, 2019 Public Meeting to hear from the public about proposed plans for clean up of coal ash at Duke Energy's Roxboro Plant.

This is an important issue and we appreciate your time.

As one of the 1,500+ Hyco Lake homeowners, our family is deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

We recently reviewed the various options presented at the January 24, 2019 meeting, and are concerned that none of the current proposals seem to take into consideration key factors including: 1) the increased frequency and magnitude of flooding on the lake and 2) the limited durability of membrane materials that is currently used to line coal ash pits.

Furthermore, we are concerned that existing North Carolina laws relating to coal ash may not go far enough to protect local groundwater supplies or the water quality and wildlife in Hyco Lake.

Proper cleanup and storage of existing and future coal ash is in the best interest of all parties involved – including Duke Energy and its' Roxboro Plant employees – and, so, we encourage you to work with Duke Energy to come up with a plan that goes beyond what the current law allows to address public health, safety and welfare concerns.

With this in mind, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the

fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the “near miss” from Hurricane Florence which dumped between 21” and 33” in North Carolina, we believe this request for an elevated location is warranted.

Furthermore, we believe the potential for serious impacts on the environment, economy and public health for the immediate area and downstream provides sufficient support for coming up with new and better plans than those originally planned.

Again, thank you for your consideration and for working with Duke Energy to find an appropriate storage site for existing and future coal ash that meets these goals – as has been done in other North Carolina and South Carolina communities.

Sincerely,

Jeanne Brown

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

As a former environmental scientist for the Florida Department of Environmental Protection, I am compelled to provide my observation: Duke has not provided reasonable assurance that the Marshall and Allen coal ash ponds will be in compliance with federal and state environmental laws.

To be clear, it is impossible for anyone to provide any reasonable assurance that a hazardous waste storage site will be in compliance when: (1) the site is already out of compliance and (2) cannot be corrected without the complete excavation, installation of proper lining, and construction of containment infrastructure. We know that coal ash and derivative contaminants AR in the groundwater table at both the Marshall Steam Station and the Allen Steam Station. Duke has stipulated to those facts, as well.

Consider that if the coal ash is excavated, in order to construct an appropriately lined storage reservoir, a new permit application (not modification) would normally be required and fair and equal standards applied. As part of that application, the riverside and lakeside locations would probably not be selected for a new facility under today's siting rules.

Indeed, it appears that Duke has been given preferential treatment, evidenced by the arbitrary procedural measures taken to reclassify its ash ponds as reduced risk. The risk reduction was not granted because of changed physical conditions on-site. Rather, the risk was reduced simply because Duke asked for a favorable reassessment. A different standard was applied. Reviewers appear to have tailored their assessment in order to reclassify the sites because the potential risk of the sites has only increased due to the increased amount of material and aging of the facilities. This counterintuitive risk assessment and decision-making process satisfies the (normally difficult to illustrate) "arbitrary and capricious" standard required to revoke a permit.

I also expect that other facilities have not been granted the option to cap hazardous waste in-place when it was actively contaminating groundwater, wetlands, and surface waters-- particularly drinking water supplies. Although no site is equal, North Carolina residents and businesses require an equal application of the law. The mere fact that a cap-in-place option was extended to Duke illustrates unfair and improper application of administrative rules and procedures.

From a permitting or compliance administrator's perspective, it will be a nightmare address ongoing, chronic violations at these sites as hydrological and geological processes continue. Leaving the waste at these locations indefinitely requires an unacceptable amounts of government hand holding and babysitting. I don't think the State of North Carolina is prepared to assume the role of adoptive parents of two problem children.

For decades, Duke has abdicated its responsibility to better dispose of and recycle its coal ash. It is time that Duke assumes the responsibility.

It is also time that NCDEQ stops deferring to Duke. NCDEQ has the staff and the expertise. So, deference to information provided by Duke contractors at public meetings is an insult to the talented scientists, engineers, and technicians working for the state of North Carolina.

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

It saddens and enrages me that we have to hold our large companies to such standards that allows them to punish the public and their/our children for decades with their dismal integrity ruling all plant and animal life.

Regards,
Kathy Long

Subject: [External] Coal Ash Clean-Up and DEQ Permits
Date: Friday, February 15, 2019 11:28:24 PM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

NC Department of Environmental Quality,

North Carolina's coal ash dumps and ponds must to be cleaned up and DEQ should only allow complete encapsulation for the new ash storage facilities. The existing dumps should be carefully excavated to minimize airborne particulates and moved away from rivers and flood plains to fully lined sites on Duke Energy's property.

Cap-in-place is unacceptable for **any** of the coal ash sites in North Carolina. Any "solutions" proposed by Duke Energy that do not excavate and move ash to fully lined, scientifically designed systems that fully encapsulate coal ash must be rejected. Without multiple, sealed bottom, side, and top liners, North Carolina's groundwater will always be at risk. Due to increases in extreme weather, more frequent hurricanes and massive rainstorms, groundwater models of 100 or 500-year floodplain are obsolete. Given the unpredictable fluctuations in the water tables and groundwater flows, there is no way that surface capping without properly engineered underlying bottom liners can protect groundwater in the coming decades.

Unlike Duke Energy's new lined landfill at Brickhaven in Chatham County, the construction of all new lined landfills should be scientifically engineered to protect groundwater in every way possible. Duke Energy's has a long history of widespread groundwater and surface water contamination, and criminal violations of the clean water act. Because of these repeated and gross violations that created health problems and drinking water contamination throughout the state, DEQ should require Duke Energy's new landfills to go beyond the minimal mandatory protections provided by current regulations. DEQ must carry out independent studies and obtain recommendations for the best liner technologies, redundant liners, and with multiple long-term safeguards. Scientifically based placements for baseline and ongoing groundwater monitoring wells should be established. These must be thoroughly and constantly monitored – with full, public, transparent, internet accessible, easily available data from the monitoring results.

Ground water and surface monitoring should be ongoing for a minimum of 50 years. This monitoring should be funded by Duke Energy, but carried out by independent, qualified field technicians and laboratories.

During excavation, construction, and filling of the landfills, all worker safety measures should be taken to prevent a repeat of the serious harms to worker health from the cleanup crews that worked on the TVA spill in Kingston, Tennessee. Again, unlike Brickhaven, worker safety, proper fitting and testing of N95, or better, particulate masks should be required for everyone that works in or around the coal ash, or that operates bulldozers, dump trucks, or heavy equipment that transport the ash. Wherever needed, full protective suits should be provided to workers. Regularly scheduled OSHA inspections, as well as unannounced and unscheduled OSHA inspections should be part of the clean-up and construction permits until all exposed ash is fully covered at each site.

While transporting existing coal ash dumps away from rivers and floodplains is essential, every effort should be taken by DEQ to ensure that the distances coal ash is moved is minimized and that the coal ash destinations are always kept on Duke Energy's property.

Once constructed, these new lined landfills should represent the best technologies and materials available – not materials that create short-term financial savings. The original existing dumps were disasters for public health, for NC communities, and for our state's waters. We have this one chance to remediate some of the damages and most importantly, to safeguard future generations from heavy metal coal ash contamination. Our state-wide re-design of storage systems for millions of tons of coal ash must be done right this time.

No coal ash sites, no coal ash communities should be considered low-risk, and all deserve full protection. Gross environmental justice violations have been committed by the past handling of coal ash placements and coal ash processing practices. Now, DEQ must protect all communities. The NC Department of Environmental Quality must ensure that none of these communities, which have experienced many decades of harm, are given less than full protections. No cap-in-place permits should be allowed.

Thank you,
John Wagner

Subject: [External] Comments of Clean Water for North Carolina, Roxboro Coal Ash Basin Closure
Date: Saturday, February 16, 2019 12:03:14 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Comments of Hope Taylor, Executive Director, Clean Water for NC

For over three years, Clean Water for North Carolina has worked closely with over 60 residents in the community closely surrounding the coal ash basins at the Roxboro Steam Station, advocating with them for extension of testing and replacement water supplies to ½ mile from compliance boundaries, then assisting residents beyond that distance with the cost of state lab or private lab testing of their wells. We also advocated for protection of the state health standards for key coal ash contaminants such as hexavalent chromium, helped to interpret well test results and facilitated conversations on replacement water solutions that would best protect health of residents and the quality of life and property values for this African-American community so deeply impacted by CP&L, then Progress Energy, now Duke Progress operations.

We know from years of conversations with residents, how deeply they feel the presence of the coal ash looming so close to their homes. Even before they were aware of potential impacts, they felt the sting and degradation of coal ash dust that blew around the community, covered their homes, cars and gardens. Their lives and property values have already been deeply impacted, with many having to handle large volumes of extremely inconvenient bottled water for several years and many robbed for all time of trust of their groundwater, even those who have received the paltry settlement of \$5,000 and a filtration system that many don't trust to remove contaminants. They still feel the blight and injustice of the ash that has continued to grow into mountains in their midst, and, after many of them seeing family land sold off to CP&L in the 1960's turned into a massive toxic dumpsite, this community richly deserves to have the ash completely excavated and removed to a lined landfill on Duke land but away from the community.

West Ash Basin--Roxboro

Complete excavation of coal ash and removal to an onsite lined landfill must be the approach taken for responsible closure of this basin. Despite Duke Energy claims that only Cap in Place (Option 5), which our conversations and their articulated concerns at the January 24 Ash Basin Closure meeting show is completely unacceptable to the community,

could be finished by the CAMA deadline of 2029, there is evidence that greater total volumes of ash have been excavated relatively quickly from several other sites simultaneously, so the estimated rate of removal is far too low in terms of feasibility of removal from this basin, and excavation should start before 2020.

Excavation and removal to a new onsite landfill, Option 1, is the only rational and protective option has been added in the January 15, 2019 document. This will maximize long term protection of the community's health and quality of life, stabilize real estate values and reduce traffic through the community, as well as being far less expensive than removal to the offsite Mayo landfill.

Closure by Removal to offsite landfill at Mayo is wasteful of time and resources, and while it would provide significant long term groundwater and quality of life protection in the long term, it would necessitate extensive trucking to the offsite landfill, thus increasing traffic risks over a significant distance and potential dispersal of coal ash.

The "hybrid" Option 4 still leaves the larger portion of the coal ash in place in the current unlined landfill. Changes in groundwater levels due to major storms or climate change exacerbate the spread of groundwater contamination to spread. There is the potential for standing water on the final cover system, as acknowledged by Duke Energy. This option is as completely unacceptable to residents as Closure in Place. Duke Energy must be required to excavate all ash and remove it to the safest possible long term storage option until it can be reprocessed for industrial applications--a new onsite landfill. The expense of full excavation should not fall on Duke ratepayers, but should be paid by the shareholders who profited so massively over the years from burning coal, evading regulation and using cheap irresponsible methods of coal ash waste storage.

In all excavation and coal ash handling operations, workers must be provided extensive health protections and must be monitored for exposure to coal ash dust. The kind of exposures and crippling and deadly health consequences experienced by workers cleaning up after the 2008 Kingston coal ash spill in Tennessee must be prevented in all ash cleanups at NC sites.

Because groundwater monitoring and maintenance for the site without complete excavation would only continue for 30 years by CAMA requirements, complete excavation even more critical. Further, complete excavation and removal to onsite lined landfill is the only way to remove the violations of federal CCR rules at all unexcavated sites in NC.

East Ash Basin--Roxboro

Duke claims that the only options 1 (Cap in Place) and 3 (Hybrid Removal) would enable closure to be completed by the CAMA deadline of 2029. Both options 1 and 3 are unacceptable options to the community, so a more accelerated rate of removal must be required to prevent cleanup taking over 15 years for the complete removal options 2 and 4. These claims of excavation options taking far beyond the CAMA deadline of 2019 as well as self serving community impact assessments that unjustifiably minimize impacts to communities for the Closure in Place and Hybrid Closure in Place options are both attempts to skew the analysis toward cheaper options for Duke to excavate little or no ash. Those options will not provide adequate long term protection for the community's water, air, quality of life, nor stop the ongoing decline in property values due to the enormous and visible presence of coal ash in close proximity to many residents.

Excavation and removal to offsite landfill at Mayo, Option 2, is the most expensive option and has significant community impacts due to trucking ash for 15 miles on public roads to the existing Mayo landfill. At the Jan. 24th meeting, the community said this option was absurd, Duke owns adequate land at Roxboro for a new onsite landfill that would minimize trucking and associated traffic and air impacts.

Closure in Place Hybrid Option 3, would remove only a small portion of the ash in this basin from direct contact with the ground in the current unlined landfill. This has nearly all of the disadvantages of Cap in place, and is not acceptable as it doesn't provide significant protection for groundwater, quality of life, etc. The only advantage for this option is to Duke Energy, to save expenditures by reducing the amount of ash to be excavated and removed to a lined landfill.

Excavation and Removal to new on-site landfill is the only acceptable closure option for this basin, as it will reduce risk of groundwater contamination and impacts to quality of life , air quality, as well as greatly reduce danger and air emissions of truck traffic by carrying excavated ash to an onsite landfill.

Thank you for the opportunity to comment on the closure options that will provide greatest benefit to the long impacted communities surrounding these massive coal ash basins.

Yours truly,

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Peter Brezny

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

To whom it may concern:

Thank you for holding this public comment period to hear from affected communities about the importance of cleaning up coal ash from sites around North Carolina.

As Hyco Lake homeowners and members of the broader Roxboro community, we are deeply concerned about the impacts that the existing, unlined pits at Duke Energy's Roxboro Plant are having on local groundwater and nearby waterways. We are also worried about the economic and environmental risks these pits pose for the future of the lake and the surrounding area, if the coal ash is not properly cleaned up now.

After reviewing the various options presented at the January 24, 2019 meeting, we wish to express our strong support for a plan that requires Duke Energy to move the ash to a dry, lined and capped pit.

Furthermore, we support the idea of having the coal ash moved to an appropriate on-site location, as long as the bottom of the pit:

- 1) Lies at an elevation greater than 424' above sea level; and
- 2) Sits 10 - 12' or more above the average water table level

This request is based on projections provided by NCDEQ's Division of Energy, Mineral and Land Resources which show that, following just one day of Potential Maximum Precipitation (30"), the surface level of the lake would be at 423.3' and the fact that the fixed dam provides no opportunity to release water.

Given recent incidents of flooding and the "near miss" from Hurricane Florence which dumped between 21" and 33" in North Carolina, we believe this request for an elevated location is warranted.

Protection of local groundwater and Hyco Lake are important, shared goals between our community and Duke Energy. We urge NCDEQ to find an appropriate site for storage of existing and future coal ash that meets these goals – as has been in other North Carolina and South Carolina communities.

Thank you for your consideration.

LaRae

- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.
- Duke Energy is already required to remove its coal ash from eight other communities in North Carolina and all of its sites in South Carolina, and the governor of Virginia recently called for all the coal ash to be removed from Dominion's unlined sites—our families and our community deserve the same protections.
- Duke Energy admits it can dispose all the ash from its leaking ponds onsite in a safe, lined landfill. Ash need not travel through the community or to other communities.
- Duke Energy cannot exaggerate traffic concerns while downplaying the community's real concern: Duke Energy's water pollution. Excavation to an on-site landfill would have almost no offsite impact, and only excavation will remove the source of the water pollution.
- It is past time for DEQ to listen to the community—not Duke Energy's consultants— about what our community needs. We need Duke to clean up its coal ash and stop the water pollution.

Sincerely,
Mr. Hal Trufan

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Linda Marsh

Roxboro Power Station Comments
N.C. Department of Environmental Quality

RE: Public Comment on the Roxboro Coal Ash Cleanup

null

- Duke Energy stores millions of tons of coal ash in the floodplain of Hyco Lake and wants to leave it there permanently, placing the community at risk forever.
- DEQ should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry, lined storage — out of our groundwater and away from Hyco Lake, Sargents River, and the rivers and streams in the Dan River Basin and Roanoke River Basin.
- Duke Energy plans to leave its coal ash sitting in the groundwater at Roxboro, where it will keep polluting our groundwater, streams and rivers in the Dan River Basin and Roanoke River Basin. Recent monitoring shows Duke Energy is polluting the groundwater surrounding Roxboro with toxic materials. We need cleanup—not coverup!
- The community has come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to remove the ash.

Option ONE only!!

I have black friends there. I am 'white' and live in Durham.

Duke would not DARE even think of doing any of this there!! We would storm their bastille and stop it.

Take the money from LYNN GOOD's \$21.4 Million salary.

Roxboro Coal Ash Plan

Comments by Brian Fannon, Yadkin Riverkeeper

Having attended the public informational meeting on closure options for the Roxboro Coal Ash Site, Yadkin Riverkeeper would like to make the following comments regarding the various options.

1. Coal ash has demonstrated toxicity to human health, and should be treated with all due care and respect as we look for the final disposition of this material. The result of ignoring these health impacts is now being played out in Tennessee, where coal ash was moved with few safeguards and no protective equipment for workers.
2. While the cap in place option would slow rainwater intrusion into the ash, several residents at the information session remembered the area before it was filled with ash, and noted that 4 or 5 springs fed into a creek in that valley. If this is accurate, the ash will continue to be flooded regardless of a cap, rendering the cap in place option ineffective. To disregard the possibility of multiple springs that would continue to feed water into the ash is to disregard of the potential long-term effects of the ash on both the lake and surrounding groundwater.
3. We are disappointed on the emphasis placed on cost of the various options. With the known dangers of coal ash contamination, this emphasis attempts to place economy ahead of human health – an unacceptable compromise to North Carolinians trying to live healthy, productive, and happy lives. Additionally, prior excavations in South Carolina have demonstrated that excavation to lined pits may be less costly than the estimates currently being used.
4. Hyco Lake represents a valuable economic resource in a rural area of the state. To choose an option which continues to threaten the lake is to deprive residents not only of health security, but also threatens the future development of the local economy, such as recreation and tourism.
5. After the spill on the Dan River, less than 5% of the ash was cleaned up, with no reason to believe that future clean-ups could be more successful. With a demonstrated inability to conduct an effective cleanup, it is imperative to ensure that there are no more spills.
6. Both Virginia and South Carolina have committed to excavation to lined pits based on the long-term hazards associated with coal ash. North Carolinians deserve the same level of protection.

Thank you for considering our input on the plan for closure at the Roxboro coal ash site.

Subject: [External] Duke Energy GHG submission
Date: Friday, February 22, 2019 11:22:37 AM

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

We learned yesterday that – as soon as the Feb. 15 comment deadline for the closure options evaluations had passed -- Duke Energy submitted an additional report that purports to estimate greenhouse gas emissions associated with the various closure options for its six unresolved coal ash sites in North Carolina.

We will submit a detailed response to this report shortly.

However, NCDEQ should disregard this submission because it was made after the department's deadline for Duke to submit its materials and outside the public comment period, denying the public an opportunity to respond to it. NCDEQ should also disregard this submission because it is irrelevant to the decision facing NCDEQ, which is to select a closure method that stops the ongoing pollution and continuing threat to our water resources posed by Duke Energy's leaking coal ash basins. Duke Energy operates coal-burning generating units at each of these facilities that emit huge amounts of greenhouse gases, and NCDEQ would lose all credibility if it allowed Duke Energy to leave the toxic residuals from burning coal in leaking pits forever because of Duke Energy's supposed concern for greenhouse gas emissions.

Nor should NCDEQ and the Cooper Administration delay their decision as a result of Duke Energy's gamesmanship. NCDEQ already knows that Duke Energy's cap in place and hybrid closure plans would leave millions of tons of coal ash saturated in groundwater, where they will continue to leach toxic pollutants into public waters for decades to come, and where they will continue to pose a risk of catastrophic failure. And it knows that tens of thousands of North Carolinians have called on the agency to protect our waters by removing the ash from the unlined lagoons and placing it into dry, lined storage or recycling for concrete, as is being done in South Carolina and Virginia. It is time to require Duke Energy to remove its coal ash from the unlined basins at these six sites.

Thank you for your consideration,
Nick Torrey

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Maura Straczek
13525 Pine Harbor Rd

CAUTION: External email. Do not click links or open attachments unless you verify. Send all suspicious email as an attachment to report.spam@nc.gov

Dear Sir or Madam:

The Boys & Girls Clubs of North Central North Carolina is located in Granville County which is adjacent to Person County and can be impacted by the future of the safe basin closure there. We work with youth ages 5-18 and provide quality afterschool and summer activities for them and serve over 500 youth in Granville County and over 2200 youth in our 5 county area.

We have been following the stories about safety surrounding the closure of the coal ash basins and wish to provide an opinion on the matter. Our organization supports Duke Energy's commitment to closing the ash basins in the most efficient, safe, and economical way that is based on science and engineering.

Of all that we have heard, we fully support the Closure in Place method recommended as it seems to be the lowest cost approach method based on science and ensures that groundwater and other environmental issues are addressed. From all accounts it is the least costly and the quickest way to address the problem.

Thanks you for your time and concern regarding our support of the Closure in Place method. Please feel free to contact me with any questions at 919-690-0036 x 101.

Sincerely,

Floyd A. Johnson
Chief Executive Officer
Boys & Girls Clubs of North Central North Carolina

Dear Coal Ash Comment Administrator North Carolina DEQ: Roxboro,

The North Carolina Department of Environmental Quality (DEQ) should require Duke Energy to remove its coal ash from its leaking, unlined pits and move it to dry lined storage away from our waterways and out of our groundwater.

Duke Energy plans to leave its coal ash sitting in the groundwater at six sites in North Carolina, where it will keep polluting our groundwater, lakes, and rivers. Recent monitoring shows Duke Energy is polluting the groundwater at its coal ash ponds in North Carolina with toxic and radioactive materials. We need cleanup—not coverup!

The communities around the coal ash ponds have come out time after time over the last several years, making clear that we're concerned about pollution from Duke Energy's coal ash and want Duke Energy to get its coal ash out of its unlined, leaking pits. It is long past time for DEQ and Duke Energy to listen to the communities.

Duke Energy is already required to remove its coal ash at eight other sites in North Carolina and all of its sites in South Carolina—our families and our community deserve the same protections.

Regards,
Beth Gallagher
