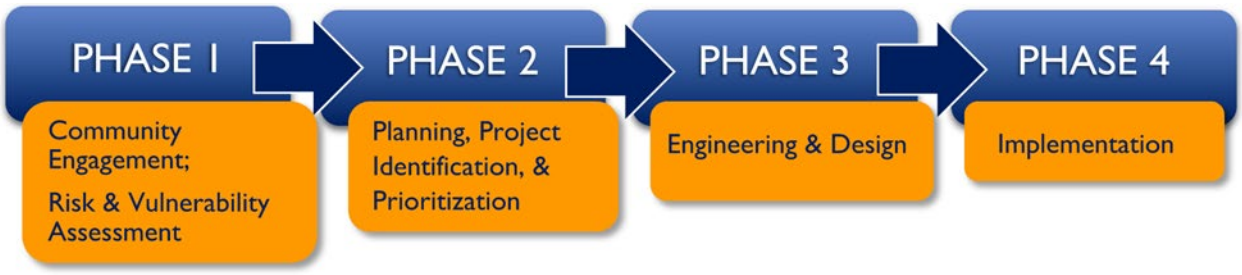
RESILIENCE STRATEGY

TOWN OF AHOSKIE

Spring 2024

EXECUTIVE SUMMARY

The North Carolina Resilient Coastal Communities Program (RCCP) was established with the objective of providing financial grants and technical assistance to support a proactive, locally and data driven, and equitable approach to coastal resilience planning and project implementation. The RCCP is administered by the North Carolina Department of Environmental Quality – Division of Coastal Management (DCM) and is comprised of four phases.



Source: NC DCM

The four phases of the RCCP are focused on:

- Forming a Community Action Team (CAT) and identifying and engaging stakeholders, including traditionally underserved populations;
- Establishing community vision and goals;
- Assessing coastal risks and vulnerabilities;
- Developing nature-based solutions that incorporate sustainable planning, design, engineering, and natural resource management; and,
- Linking communities to funding streams and technical expertise for project implementation

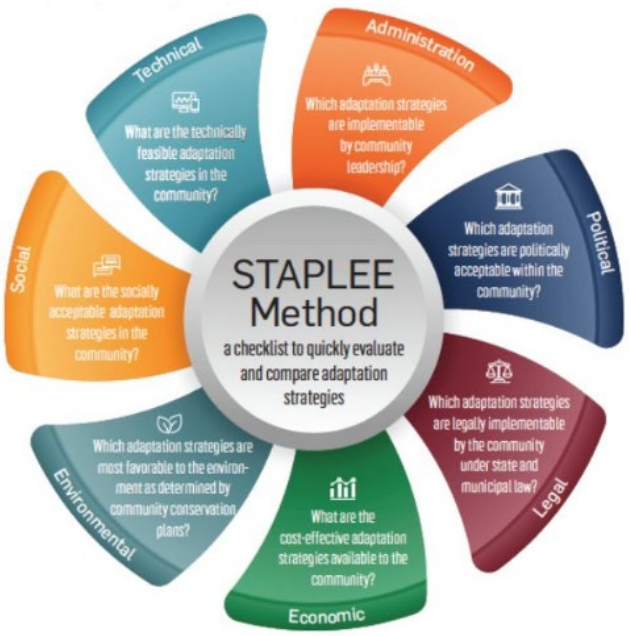
The Town of Ahoskie was selected to participate in the first two phases of the RCCP in Spring 2023. Phases 1 and 2 were completed between August 2023 and June 2024, culminating in this Resilience Strategy, the main deliverable of the program's initial phases, which is designed to be integrated into existing local plans and ordinances.

The Resilience Strategy provides a framework to:

- Document the steps and outcomes of the Phase 1 and 2 resiliency planning process;
- Provide a clarity of purpose;
- Identify opportunities for short-term and long-term resiliency actions based on community input;
- Set project priorities for Phase 3 – Engineering and Design; and,
- Identify, attract, and secure potential funding opportunities for project implementation

Through input from the CAT and the public and available data, community hazards were identified to include flooding (riverine and nuisance), drought and wildfire risk. Storm surge and sea level rise hazard areas were not included. Varying types of critical assets and natural infrastructure located throughout the town's jurisdiction were identified. Critical assets were also identified outside of the Town's jurisdictional boundaries, in the case of particularly vital assets or services.

The Town's **resilience vision** is defined as "Ahoskie is a resilient community supporting healthy economic growth by protecting critical infrastructure, providing quality infrastructure and services, and preserving natural resources for present and future generations. The town is able to quickly rebound from hazard events due to proactive measures to reduce risk and prevent loss, strong and inclusive partnerships, and a focus on serving vulnerable and disadvantaged populations."



Source: FEMA

To implement the vision, fifteen (15) resiliency **goals and objectives** were defined and grouped under economic, social, and environmental categories.

Based on local input and the risk and vulnerability assessment, a suite of nine (9) potential solutions, including planning/policy related solutions and green/hybrid and hard/grey infrastructure projects, were evaluated using the FEMA STAPLEE method and a benefit-cost analysis. This method takes into consideration the social, technical, administrative, political, legal, economic, and environmental aspects, and potential impacts of each project solution.

The cost or the economic case for different strategies or actions must be considered when developing resilience strategies. The proposed adaptation actions were also reviewed using an informal benefit-cost analysis. Ratings of high, medium, or low are assigned to the anticipated costs and the benefits associated with each action based on general criteria that are established by the community.

	Benefit/cost ratings
	Benefit
HIGH	Action would have significant impact on risk reduction
MEDIUM	Action would have an impact on risk reduction
LOW	Long-term benefits are difficult to quantify in the short term
	Cost
HIGH	Cost of project is high and/or funding will be more difficult to acquire
MEDIUM	Cost of project is medium and/or funding will be easier to acquire
LOW	Cost of project is low and/or funding is available in existing budget

After additional stakeholder input, scoring analysis and consideration by the CAT, eight (8) **prioritized project solutions** were identified for the Town of Ahoskie (see Table 1). The CAT selected the Stormwater Action Plan to move forward to RCCP Phase 3. This will be combined with the Upgrade Stormwater System project, the most popular project based upon Phase 2 Open House input, to move forward into Phase 4 implementation. These project solutions are described in more detail in the Project Portfolio.

Table 1. Priority Project Solutions

Project Name	Project Description
✓ Stormwater Action Plan and Stormwater System Upgrade	Develop a Stormwater Action Plan combined with strategically upgrading the stormwater system through improved and expanded infrastructure. The project will establish mapping and condition assessments for stormwater system components and outfalls with a focus on known problem areas and areas identified via a desktop analysis. The project will promote proactive stormwater maintenance through development of interactive mapping tools and maintenance guidance. The project will encourage stormwater quality awareness through public outreach efforts and produce construction drawings for a priority project. (Combined project to move forward to Phase 3 and Phase 4)
Backup Generators at Critical Facilities	The purchase and installation of backup generators at critical facilities.
Stream Cleanout	Inspect debris blockage problems and secure funds for the clearance of debris from rivers, streams and tributaries. This would include Ahoskie Creek and its tributaries with a primary focus on Ahoskie Creek to increase drainage flow within the watershed.
Green Stormwater Infrastructure at the R.L. Vann Center	Engineer, design, and construct low impact development (LID) stormwater infrastructure at the R.L. Vann Community Resource Center.
Retrofit or Relocate Town Hall	Retrofit or relocate townhall to mitigate for flood events.
Green Stormwater Infrastructure at Public Housing Developments	Implement green stormwater infrastructure throughout public housing developments owned by Ahoskie Housing Authority. 1.) Pierce Ave. / Burden St. / Vinson Dr. 2.) Parker Ave. / E First St.
Stormwater Wetland at the Ballfields in Ahoskie Creek Recreational Complex	Design and construct a stormwater wetland west of the ballfields at the Ahoskie Creek Recreation Complex.
Green Stormwater Infrastructure on Town-owned property	Complete a Feasibility Study with concept designs followed by strategically designing and constructing green stormwater infrastructure on Town-owned property.

INTRODUCTION

The Resilient Coastal Communities Program (RCCP) is funded through the North Carolina General Assembly, the National Fish and Wildlife Foundation, and the National Oceanic and Atmospheric Administration (NOAA) and administered by the North Carolina Department of Environmental Quality – Division of Coastal Management (DCM). Program partners include the North Carolina Office of Recovery and Resiliency, the North Carolina Sea Grant, and the North Carolina Nature Conservancy. The goal of the RCCP is to increase community adaptation ability and resilience and is a component of the statewide North Carolina Resilient Communities Program, called for in the North Carolina Climate Risk Assessment and Resilience Plan.

The four phases of the RCCP are designed to address barriers to coastal resilience at the local level; engage community stakeholders including those that are socially vulnerable; assess coastal risks and vulnerabilities; develop nature-based solutions to strategically improve the resiliency of communities and their natural and built infrastructure; and link communities to funding streams for project implementation.

- Phase 1 – Community Engagement/Risk and Vulnerability Assessment
- Phase 2 – Planning, Project Identification and Prioritization
- Phase 3 – Engineering and Design
- Phase 4 – Project Implementation

The 20 designated North Carolina Coastal Area Management Act (CAMA) counties, as well as, municipalities, homeowners associations, and federal and state-recognized tribes within this jurisdictional area are eligible to apply for the RCCP. The Town of Ahoskie was selected to participate in the first two phases in Spring 2023 which were completed between August 2023 and June 2024.

This Resilience Strategy documents Phase 1 and 2 steps and includes all associated deliverables/materials including those for the development of a CAT, stakeholder engagement, inventory and review of existing local and regional plans, defining of community vision and goals, development of a Community Engagement Strategy, identification/mapping of hazards and critical assets/natural infrastructure/socially vulnerable populations, Risk and Vulnerability Assessment Report, identification of a suite of potential project solutions, project prioritization, and the concluding Project Portfolio.

COMMUNITY ACTION TEAM REPORT

RCCP Phase 1, Step 1 involves of the creation of a CAT consisting of key stakeholders, ideally with diverse and multi-disciplinary backgrounds, and expertise in planning and community development, hazard mitigation, utility management, engineering, the community's economy, engaging with vulnerable and underrepresented populations, and nature-based solutions. CAT members could include:

- Community residents
- Neighborhood or faith leaders
- Municipal/county managers
- Planners
- Elected officials
- Utility managers
- Community and economic developers
- Business community representatives

- Disaster recovery coalitions/groups
- Councils of Governments (COGs)
- State and federal land managers
- Non-governmental organizations (NGOs)
- Others working with the community on resilience planning

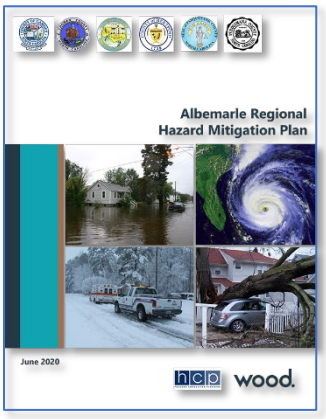
The CAT Champion, or lead member, was identified and worked with the contractors to identify additional CAT members to fill the roles detailed above. Potential members were contacted by phone and/or email either by the contractors or the CAT Champion. The need for CAT members was announced to the public at Town Council meetings and elected officials were selected to serve and underserved community representatives were identified.

COMMUNITY ACTION TEAM MEMBERS

- CAT Champion – Jennifer Bracy, Town Clerk, Certified Floodplain Manager, Interim Town Manager
- Morgan Askew, Planning/Zoning Administrator and Floodplain Manager
- David Hunt, Councilman
- Roy Sharpe, Councilman
- Mike Bradley, Fire Marshall and Building Inspector
- Stephen Lassiter, Public Works Director
- Hunter Smith, Assistant Public Works Director
- Pat Byrd, Christian Women's Job Corp.
- Paul Moore, Pastor of The Rock Church

Refer to Appendix A for Community Action Team Materials.

REVIEW OF EXISTING LOCAL & REGIONAL EFFORTS



To avoid the duplication of work and build upon and remain consistent with previous resiliency efforts, existing programs, plans, policies and ordinances were reviewed and incorporated as part of RCCP Phase 1, Step 2. The Albemarle Regional Hazard Mitigation Plan contains a baseline vulnerability and risk assessment and served as a reference point for conducting the assessments while considering additional factors and the local context.

RELEVANT PLANS, ORDINANCES, POLICIES, and PROGRAMS

- **NCORR Regions Innovating for Strong Economies and Environment (RISE) Program: Resilience Projects for the Mid-East Region (2022)** – The Regional Resilience Portfolio Program is a two-part effort consisting of the Climate Change and Natural Hazards Vulnerability Assessment for the Mid-East Region and a Project Portfolio. The Project Portfolio is a compilation of regionally focused resilience projects that will provide benefits throughout the Mid-East Region. *(Source: NCORR)*

- Albemarle-Pamlico National Estuary Partnership Comprehensive Conservation and Management Plan (2012-2022) – This plan is organized around four basic questions and related answers: what is a healthy Albemarle-Pamlico system; what is the current condition of the system; what are the most significant challenges facing the system over the next 10 years; and what actions should be implemented to best achieve a healthy system? *(Source: APNEP)*
- Albemarle Regional Hazard Mitigation Plan (2020) – This plan ensures all possible activities are reviewed and implemented so that the problems are addressed by the most appropriate and efficient solutions. This plan provides a framework for all interested parties to work together toward mitigation. It establishes the vision and guiding principles for reducing hazard risk and proposes specific mitigation actions to eliminate or reduce identified vulnerabilities. *(Source: Holland Consulting Partners/Wood.)*
- Hertford County Emergency Operations Plan (2020) – The Hertford County Emergency Operations Plan has been developed to address multiple hazards which threaten the county. Using a functional format, this plan encourages an Integrated Emergency Management approach to disaster and fosters prompt, efficient and coordinated response operations by elements of the emergency organization. *(Source: NCEM)*
- Hurricane Matthew Resilient Redevelopment Plan, Hertford County (2017) – The purpose of the plan is to provide a roadmap for community rebuilding and revitalization assistance for the communities that were damaged by the hurricane. The program empowers communities to prepare locally driven recovery plans to identify redevelopment strategies, innovative reconstruction projects, and other needed actions. *(Source: NCEM)*
- Hurricane Matthew Resilient Redevelopment Plan, Northeast Region (2017) – As part of the program, NC Emergency Management facilitated development of regional resilient redevelopment plans for four "prosperity zones" as identified by the NC Dept of Commerce, created to facilitate collaborative and coordinated planning and use of resources. *(Source: NCEM)*
- Hertford County Comprehensive Transportation Plan (2015) – The Hertford County Comprehensive Transportation Plan (CTP) is a long-range plan which identifies major transportation improvement needs and develops long term solutions for the next 25 to 30 years. The CTP study involves both government officials and the public in an effort to determine the area's future transportation needs based on the best information available including, but not limited to, population, economic conditions, traffic trends and patterns of land development in the county. *(Source: NCDOT)*
- Hertford County CAMA Land Use Plan (2011) – This locally adopted land use plan is certified by the North Carolina Coastal Resources Commission and is then used by DCM in making CAMA permit decisions and to ensure projects and activities remain consistent with the policies of a local land use plan. *(Source: NCDEQ)*
- Town of Ahoskie Comprehensive Bicycle Plan (2010) – This plan functions as a guide for the town to develop a bike-friendly community, to assist in budgetary decisions and to apply for grant funds from regional, state, federal and private funding sources. *(Source: Rivers and Associates)*
- Town of Ahoskie Economic Development Strategy (2018) – This plan includes an inventory of assets, identification of economic drivers, strengths, weaknesses, opportunities and threats and the setting of objectives to implement the plan's vision. *(Source: NC Main Street and Rural Planning Center)*
- Town of Ahoskie Comprehensive Land Use Plan (2022) – The purpose of the Ahoskie Comprehensive plan is to help chart a new course for the community over the next 20 years. This plan seeks to identify Ahoskie's assets, opportunities, and weaknesses, to create inclusive growth that

will serve the needs of desires of those who live and work nearby. *(Source: UNC-CH Dept. of City and Regional Planning)*

- Town of Ahoskie Code of Ordinances – The adopted code includes applicable ordinances such as Building Code; Emergency Management; Flood Damage Prevention; Housing Code; Subdivision; Zoning; Streets, Sidewalks, and Other Municipal Property; and Utilities: Water and Sewer.

VISION & GOALS

Phase 1, Step 3 involves developing a community-specific vision, goals, and objectives to guide the planning process. Relevant local and regional plans were summarized for the CAT and vision statements and goals from each plan were reviewed as well as, example goals from resiliency plans outside the area. Using this input, example vision statements, goals, and themes were identified and were used to guide the CAT's brainstorming process during CAT Meeting 1.

The team was encouraged to employ the triple bottom line approach to resiliency, which considers environmental, economic, and social factors. Worksheets were provided to CAT members for use in identifying draft vision statements, goals, and objectives that reflected local values and priorities. The team worked together during the meeting to complete the worksheets. Team members also had an opportunity to complete the worksheets following the meeting.

Input from the CAT was used to finalize the resilience vision, goals, and objectives listed below.

RESILIENCE VISION

Ahoskie is a resilient community supporting healthy economic growth by protecting critical infrastructure, providing quality infrastructure and services, and preserving natural resources for present and future generations. The town is able to quickly rebound from hazard events due to proactive measures to reduce risk and prevent loss, strong and inclusive partnerships, and a focus on serving vulnerable and disadvantaged populations.

RESILIENCE GOALS and OBJECTIVES

Economic

Goal 1: Promote economic growth and development.
Objectives:

- Revitalize the historic downtown.
- Attract new, sustainable businesses.
- Support businesses in achieving natural hazard resilience and in recovery efforts when events occur.
- Strive for a sustainable economic base that allows all residents equal access to good jobs and meaningful education.

Goal 2: Provide quality municipal infrastructure and services.
Objectives:

- Maintain the town's sewer system and improve/upgrade the system as needed.
- Maintain the town's water system and improve/upgrade the system as needed.
- Maintain the town's road system and improve/upgrade the system as needed.

- Develop strong partnerships with electric providers including Dominion Energy and Roanoke Electric Membership Cooperative (EMC).
- Provide high quality public services.

Goal 3: Support smart growth principles with future development.
Objectives:

- Provide guidance on how future development can minimize additional damages and recovery costs from hazard events.
- Discourage development in areas at high-risk for flooding or storm damage.
- Encourage the demolition of unused and dilapidated impermeable surfaces and buildings.
- Implement mitigation activities that will assist in protecting lives and property.
- Recognize that low level nuisance flooding and tidal flooding are going to become increasingly frequent, and that infrastructure needs to be built or retrofitted in anticipation of these events.
- Plan for sea level rise in coastal areas.

Goal 4: Improve and maintain buildings to support resilience to hazards.
Objectives:

- Incentivize the construction of "flood resistant" homes.
- Elevate homes in flood prone areas.
- Floodproof businesses and other non-residential buildings in flood prone areas.
- Promote research and development of building construction and design standards that can better withstand storm damage.
- Promote energy efficiency and solar panels for homes and businesses.

Goal 5: Protect and maintain critical infrastructure and ensure that critical infrastructure is resilient to anticipated hazards.
Objectives:

- Identify key community assets that will need increased physical and fiscal protection from the major weather events and incremental climate change impacts we will face in the next 20-50 years.
- Protect, maintain, and enhance critical infrastructure.
- Reduce power outages for residents and businesses.
- Promote research and development of utility infrastructure hardening.
- Create redundancies in the water and sewer service networks.

Goal 6: Support strong, resilient local businesses and neighborhoods.
Objectives:

- Invest in community development projects (e.g., bicycle and pedestrian facilities, public parks, affordable and diverse housing options) and create a connected community fabric where residents support thriving local businesses.
- Support and strengthen the local economy.
- Ensure that local businesses are able to reopen quickly following a hazard event.
- Ensure that residents are able to return home, have services, and return to normal life quickly following a hazard event.

Goal 7: Identify and obtain funding for resilience projects.
Objectives:

- Develop a list of resilience projects suitable for funding.

- Identify funding and grant opportunities to implement resilience projects.
- Identify funding to reduce repetitive losses from previous hazard events, such as funding for building elevation/floodproofing and equitable buyouts.
- Utilize partnerships and apply for identified grant opportunities to implement projects.

Environmental

Goal 8: Reduce flooding.
Objectives:

- Reduce the potential for flooding of homes and businesses.
- Develop flood mitigation projects, including nature based and sustainable solutions.
- Identify both structural and non-structural solutions to flooding.

Goal 9: Improve stormwater management.
Objectives:

- Map the city's stormwater system in GIS.
- Maintain and improve the capacity of the stormwater system.
- Conduct planning processes leading to recommendations for stormwater BMPs.
- Improve construction and site design standards to reduce debris caused by flooding and storms.
- Demolish dilapidated homes and remove impervious surfaces as practicable and feasible.
- Encourage the construction of permeable surfaces to reduce flash flooding.
- Drainage ditches should be targeted for stormwater projects to reduce runoff and improve water quality.

Goal 10: Preserve natural resources.
Objectives:

- Incentivize reliance on "natural" protective systems as much as possible (i.e., leaving wetlands, forests and marshes as intact as possible to absorb floodwaters and mitigate storm surge).
- Discourage excessive covering of land with impervious surfaces.
- Conserve resources for present and future generations.
- Protect a connected network of green spaces.
- Clean up trash in and along waterways.
- Control illegal dumping.

Goal 11: Maintain, protect, and where possible, enhance water quality in all wetlands, rivers, streams, and estuaries.
Objectives:

- Improve the water quality of the Chowan River, Ahoskie Creek, and their tributaries.
- Explore implementation of a local riparian buffer ordinance to encourage intensive development to occur away from rivers and streams.
- Support federal and state regulations related to water quality and report known violations.
- Partner with the local council of governments, environmental non-profits, and local universities to plan, develop, and implement water quality projects.

Social

Goal 12: Develop and nurture strong social networks supporting resiliency and a connected community fabric.
Objectives:

- Continue developing and nurturing partnerships with community and business organizations and non-profit organizations.
- Utilize social networks for hazard resilience education and for recovery following hazard events.
- Improve partnerships with Hertford County and with other municipalities in the county.

Goal 13: Serve vulnerable and disadvantaged populations.
Objectives:

- Enhance public education about available transportation options during evacuations.
- Ensure that bedridden citizens, elderly non-drivers, low income, and other vulnerable populations have information on available transportation options.
- Provide the public, including socially vulnerable populations, with the tools needed to protect themselves from natural hazards.
- Conduct grassroots outreach efforts to share information and engage residents in resiliency efforts.
- Partner with local community groups and faith organizations.
- Ensure that all programs are equitable.

Goal 14: Reduce the risk of loss of life and personal injury from natural hazards through local land development regulations, capital improvements planning/investment, and proactive long-range planning regarding land use and post-disaster redevelopment.
Objectives:

- Continue partnering with Hertford County Emergency Management.
- Restore services quickly and efficiently following a hazard event.
- Minimize damage and loss of life from disasters.
- Plan how to deal with increased solid waste and storm debris disposal as natural disasters are anticipated to result in more home and property destruction in the future.
- Develop a Comprehensive Evacuation Plan.
- Plan for serving areas cut off by flood waters post storm events.
- Rebound quickly following a hazard event.
- Review local land development regulations and capital improvement plans for opportunities to incorporate hazard resilience.

Goal 15: Support a thriving, healthy and resilient community, local identity, and recreational access to nature.
Objectives:

- Promote riparian buffers as spaces for recreation, education, and enjoyment.
- Promote outdoor recreational activities for everyone, including public waterfront access.
- Ensure that all residents have access to clean water, food, healthcare, quality education, good jobs, and affordable, suitable housing.
- Preserve historic buildings and other cultural and historic resources.
- Support community improvements which improve the quality of life for all citizens.

STAKEHOLDER ENGAGEMENT STRATEGY

EXISTING CONDITIONS, ISSUES, and OPPORTUNITIES

RCCP Phase 1, Step 4 directs contractors to develop and implement a stakeholder engagement strategy. Information was presented and stakeholder input was gathered through various methods such as site visits,

two public open houses coinciding with Phase 1 and Phase 2, a public survey, interactive displays, handouts, PowerPoint presentations and a GIS storymap available at the second open house.

Public Survey

A public survey was developed in partnership with the CAT and released after CAT Meeting 1. Survey questions were based around resiliency to flooding, coastal erosion, coastal storms and sea level rise and were designed to be completed in 15 minutes or less depending on the amount of input.

Advertisement methods included:

- Flyer contained a link to the online survey and information on hard copies available at Town Hall, plus a phone number to request a mailed hard copy
    - Flyer posted electronically – Town website, Town Facebook page
    - Flyer posted in person – Town Hall, Fire Dept./Town Council Meeting Chambers, Ahoskie Public Library
    - Flyer mailed to all local churches
    - Flyers distributed at Fall Fling event
- Announcement was made at Town Council meeting

Survey input was used to identify existing conditions, issues, needs, and opportunities to enhance resiliency. Information was gathered on how personal lives and property have been affected by flooding, how flooding is perceived in the community, and what measures they have taken to prevent or avoid flooding. This information was used to recommend appropriate strategies for flooding resilience including public education campaigns. A total of 36 stakeholders responded to the survey.

Phase 1 Open House

The in-person Phase 1 Open House was held on December 13, 2023 from 4:00 p.m. – 6:30 p.m. and a virtual meeting was held December 15, 2023 from 4:00 p.m. – 6:30 p.m.

Advertisement methods included:

- Flyer posted electronically – Town website, Town Facebook page
- Flyer posted in-person – Town Hall, Fire Dept./Town Council Chambers, Ahoskie Public Library
- Flyer mailed to all local churches
- Event posted on electronic message board
- News release ran in the Roanoke Chowan News Herald newspaper
- Announcement was made at Town Council meeting

For the Phase 1 Open House, poster displays included:

- What is resiliency?
- Hazard Identification Exercise Maps (interactive)
- What does resiliency mean to you? (interactive)
- North Carolina Resilient Coastal Communities Program
- Community Vision and Goals Exercise (interactive)

The public survey was available at the Phase 1 Open House to gather stakeholder input and there was also a resource table with handouts on topics such as the RCCP, flood readiness, stormwater education, creating home rain gardens, septic maintenance, mold remediation, etc. Some of these materials were made available

in Spanish. Contractors and CAT members were on hand to interact with the public during the in-person and virtual events.

DRAFT RESILIENCY ACTIONS

In Spring 2024, a storymap was created using ArcGIS Online and was posted at AhoskieFloodResilience.org. The storymap presented Resiliency 101, Ahoskie's vision statement, CAT members, existing resiliency plans, public survey input, the risk and vulnerability assessment, the top flood related hazards, the STAPLEE analysis, and proposed draft actions. The storymap was presented at the Phase 2 Open House.

Phase 2 Open House

The Phase 2 Open House was held on March 14, 2024 from 4:30 p.m. – 5:45 p.m. prior to a regularly scheduled council meeting in an effort to encourage attendance and participation. This event was advertised through the same methods employed for the Phase 1 Open House.

For the Phase 2 Open House, displays included:

- What is resiliency?
- North Carolina Resilient Coastal Communities Program
- Action Strategy Areas
- Draft Actions
    - Provide input on your top (6) preferred actions and an option to suggest other projects that were not listed (interactive)

In addition to the interactive posters, comment forms were also available to provide another method to solicit feedback on preferred projects and other aspects of the community's resiliency program. Resource handouts were also available, and contractors were in attendance to interact with the public.

Public input indicates that the most popular project for the community is the Stormwater System Upgrade.

ENGAGEMENT TOOLS LIST

- Public Survey
- Webpage/GIS storymap
- Notifications (news release, social media ads, flyers, announcements)
- Public Open Houses (In-person and Virtual)

Refer to Appendix B for Stakeholder Engagement Materials.

RISK AND VULNERABILITY ASSESSMENT REPORT

The Risk and Vulnerability Report details the quantitative and qualitative assessments performed for evaluating the vulnerability of critical assets, natural infrastructure, and vulnerable populations to hazards faced by the community.

As part of Phase 1, Step 5, the contractor team identified critical assets including community resources, built infrastructure, natural infrastructure, and socially vulnerable populations. Critical assets were identified primarily within the Town's jurisdictional boundaries, and in some cases were identified outside of the Town's jurisdictional boundaries in the case of particularly vital assets or services.

MAPPING ASSETS, NATURAL INFRASTRUCTURE, AND VULNERABLE POPULATIONS

Community Assets

Contractors worked with the CAT at Meeting 2 to identify community assets in list format, then researched what GIS data was available and created maps of community assets located within the Town's jurisdictional boundaries. In some cases, there was already a data layer available. In other instances, the GIS data was created by the contractors based on CAT input on which assets to include. In the sources listed below, "created" is used to designate data that was developed by the contractor.

Sources:

- Emergency Management – created
- Law Enforcement – created
- Fire and EMS Stations – NC Office of State Fire Marshall
- 911 Dispatch – created
- Government Services – created
- Food – created
- Water/Wastewater
    - Public Water Supply Wells – NC Dept. of Environmental Quality (NC DEQ) Division of Water Resources
    - Wastewater Discharge Permits – NC DEQ Division of Water Resources
    - Town Wide Water and Wastewater System Mapping – Wooten Company
- Propane suppliers – created
- Transportation
    - Road Network – Hertford County
    - Bridges – NC Dept. of Transportation (NCDOT)
    - Rail – NCDOT
- Medical – created
- Schools – created
- Libraries – created
- Community Buildings and Museums – created
- Affordable Housing Areas – created
- Downtown Commercial District – created
- Tax Parcels – Hertford County

Natural Infrastructure

Contractors researched existing natural infrastructure data and shared an initial list with the CAT. The team helped to add additional natural assets to the list. Contractors also worked with the team to identify local public land and private land used for public recreational purposes. Contractors then created maps of natural infrastructure located within the Town's jurisdictional boundaries.

- Wetlands – NC Coastal Regional Evaluation of Wetland Significance (NC CREWS)
- Parks and Public Land – created
- Priority Forests – NC Natural Heritage Program
- Floodplains – FEMA
- Surface Water
    - Rivers and Streams - NCDEQ
- Managed Areas – NC Natural Heritage Program
- Biodiversity and Wildlife Habitat Assessment – NC Natural Heritage Program

Vulnerable Populations

Maps of vulnerable populations were downloaded from the Center for Disease Control including the overall Social Vulnerability Index, Socioeconomic Status, Household Composition/Disability, Race/Ethnicity/Language, and Housing Type/Transportation. The CAT reviewed the series of vulnerable populations maps and provided additional input on the presence of vulnerable populations and the accuracy of the data.

Sources:

- Social Vulnerability Index – US Center for Disease Control
- 2021 American Community Survey 5-year estimates from the US Census Bureau
- EPA Environmental Justice Screen Reports

IDENTIFYING AND MAPPING HAZARDS

Riverine flooding, nuisance flooding, sea level rise, storm surge, drought, wildfire and coastal erosion were initially considered as community hazards to assess risk and vulnerability within the community. Hazards not applicable to specific communities were not factored into the complete risk and vulnerability assessments. After the initial assessment, riverine flooding, nuisance flooding, drought and wildfire were evaluated for Ahoskie as community hazards. Definitions of each hazard and the data used to calculate risk and vulnerability are shown below. Refer to the vulnerability index for the thresholds used for each dataset and how each dataset was used to calculate vulnerability. Contractors also created maps of each hazard, including hazard layers overlaid with critical assets and natural infrastructure.

Riverine Flooding

Riverine flooding is defined as when a stream exceeds its capacity and overflows into adjacent low-lying or dry land (Riverine Flooding | National Risk Index (fema.gov)). FEMA has created datasets to indicate flooded areas during a 100-yr and 500-yr storms. This data, along with Zone X indicating moderate to low flooding risk, was used to identify potential flood vulnerabilities within the community.

Sources:

- North Carolina Emergency Management Floodplain Mapping program
- OpenFEMA Data Sets | FEMA.gov
- Riverine Flooding | National Risk Index (fema.gov)

Nuisance Flooding

Nuisance flooding is caused by stormwater holding in low-lying areas within a community. To assess nuisance flooding, a digital elevation model was downloaded from the North Carolina Spatial Data Download (nc.gov) to identify low lying areas using ESRI ArcGIS PRO Hydrology tools including Fill DEM, and Sink. Low lying areas

capable of holding a storm greater than or equal to the 5-yr storm were evaluated based on proximity to an asset to determine vulnerability.

Sources:

- North Carolina Spatial Data Download (nc.gov)
- ESRI Arc Hydro
- National Stormwater Calculator (epa.gov)

Drought (2000-Present)

Drought is defined as a prolonged period of dry conditions caused by a lack of precipitation, resulting in a water shortage. To assess drought conditions for each community, the Historical Drought data from Drought.gov was used to calculate the potential vulnerability for drought conditions based on previous data (2000-2023). Each community was given a constant drought vulnerability score based on the thresholds presented with the vulnerability index.

- Historical Data and Conditions | Drought.gov
- Drought Basics | Drought.gov

Wildfire

A wildfire is an unplanned, uncontrolled fire that spreads quickly. The Wildfire Risk to Communities data from the US Forest Service was used to predict the vulnerability of a wildfire affecting each community and its assets. This data takes into consideration population, building location, building coverage, land cover, and wildfire hazards.

Sources:

- Data: USFS – Wildfire Risk to Communities Wildfire VHazard Potential
- WRC_PopulatedAreas_Methods_Dec2020.pdf (wildfirerisk.org)

ASSESSING VULNERABILITY

Vulnerability = Exposure + Sensitivity - Adaptive Capacity

- **Vulnerability** – Describes a system's susceptibility to harm or change. Vulnerability is the combined result of exposure, sensitivity, and adaptive or response capacity and, as such, a function of the character, magnitude, and rate of the climate change hazard to which a system is exposed, as well as of non-climatic (social and environmental) characteristics of the system, which determine its sensitivity and adaptive capacity.
- **Exposure** – Refers to the probability of physical contact between an asset and a hazard.
- **Sensitivity** – Is the degree to which an asset is impacted by a hazard.
- **Adaptive Capacity** – Is the ability of an asset to cumulatively adapt to all hazards.

To assess vulnerability, the contractor developed multiple vulnerability indexes which combined exposure, sensitivity, and adaptive capacity to estimate cumulative vulnerability of critical assets within six categories: Building Infrastructure, Affordable Housing, Downtown Commercial District, Transportation Infrastructure, Sewer & Utility System Infrastructure, and Natural Resources.

Exposure and sensitivity were objective factors within the vulnerability equation.

EXPOSURE – The exposure parameter analyzed effects of different coastal hazards on community critical assets by categorizing each exposure to the individual hazard as high, medium, or low. This score was weighted based on the hazard risk within the community. These hazards included: riverine flooding, nuisance flooding, storm surge, drought, fire, and sea level rise. Hazards that did not directly affect the community were considered and removed from the list. Exposure thresholds were set based on best available data and can be viewed in the Vulnerability Index.

SENSITIVITY – The sensitivity parameter analyzed the cumulative effects of the hazards on critical assets within each category by assigning a percent threshold or indicating a high/low need for that asset within the community. For example, high sensitivity for building infrastructure indicates that greater than 66% of the community asset building – within a certain subcategory (e.g., police stations) - were affected by the coastal hazard or that a particular building was highly sensitive to the function of the community. This assessment indicated the value of redundancy and alternative uses of assets.

ADAPTIVE CAPACITY – Adaptive capacity was a subjective factor within our assessment that used objective data and community input to evaluate an asset's ability to recover and/or the ability of that assets to be modified for resiliency. Factors such as: social vulnerability, feasibility of relocation, feasibility of retrofit, and possible alternatives were evaluated to give each critical asset an adaptive capacity score. Contractors relied on input from the CAT to evaluate the adaptive capacity of each critical asset. Thresholds for adaptive capacity are within the Vulnerability Index.

Asset	Exposure Score 0-3	Sensitivity Score 0-3	Adaptive Capacity 0-3	Vulnerability Score 0-6
Asset name	*0 = no exposure* *1 = low* *2 = medium* *3 = high*	*0 = no sensitivity* *1 = low* *2 = medium* *3 = high*	*0 = no adaptive capacity* *1 = low* *2 = medium* *3 = high*	*0-2 = low* *3-4 = medium* *5-6 = high*

Critical assets were given a score based on the average exposure, sensitivity, and adaptive capacity scores. These scores were then used in the vulnerability equation to calculate cumulative vulnerability. The thresholds for each category are listed below:

Exposure Parameters

Riverine Flooding

- High: Zone AE (100-yr flood level)
- Med: 0.2 percent (500-yr flood level)
- Low: X Zone (Low to Moderate risk)

Nuisance Flooding

- High: Low lying area on the property or within 25 ft of structure or asset / intersect linear feature
- Med: Up to 50 ft from property or within 50 ft of structure or asset
- Low: >50 ft from property or >50 ft of structure or asset

Drought (2000 - Present)

Ahoskie was given a consistent score of 2 based on county evaluation. Historical Data and Conditions | Drought.gov

- High – 3+ periods >18 days of Extreme or Exceptional Drought or 5+ periods of 30+ days of Severe Drought
- Med – 1-2 periods of Extreme or Exceptional Drought or >12 days or 2-5 periods of Severe Drought >18 days
- Low – No cases of prolonged (>12 day) severe or Extreme or Exceptional Drought periods

Wildfire - (Data: USFS – Wildfire Risk to Communities Wildfire VHazard Potential)

- Low: USFS – Very low or low
- Med: USFS – Moderate
- High: USFS – High or very high

Generated Report for Risk and Vulnerability. Map | National Risk Index (fema.gov)

Groups

Buildings

Exposure

- High weight (3): Riverine Flood, Nuisance Flood, Fire
- Med weight (2): Drought

Sensitivity (Infrastructure group)

- High: >66%+ Facilities affected / Needed by the community
- Medium: 33%-66% / Other facilities can be used (Alternatives)
- Low: <33% / Facility not needed to operate

Adaptive Capacity

- Subjective – need community input
- Social Vulnerability Index
- Ability to relocate building infrastructure (Ex. From 25yr to 50yr floodplain)
- The ability to raise structure
- Accessibility to residents once moved (SVI)
- Land availability
- Ability to retrofit for flooding (raise generator/sensitive components)
- Another facility can be used in its place
- Facility is not needed to operate

Affordable Housing

Exposure

- Average Score of exposure parameters

Sensitivity (Infrastructure group)

- High: >66% of area affected by 2 exposure parameters / High SVI
- Medium: 33%-66% of area affected by 2 exposure parameters / Moderate SVI
- Low: <33% of area affected by 2 exposure parameters / Low SVI

Adaptive Capacity

- Subjective – need community input
- Social Vulnerability Index
- Ability to relocate building infrastructure
- The ability to raise structure

- Accessibility to residents once moved (SVI)
- Land availability
- Ability to retrofit for flooding (raise generator/sensitive components)

Downtown Commercial District

Exposure

- Average Score of exposure parameters

Sensitivity (Infrastructure group)

- High: >66% of area affected by 2 exposure parameters / Buildings affected are needed by the community / Cultural significance
- Medium: 33%-66% of area affected by 2 exposure parameters / Alternatives available
- Low: <33% of area affected by 2 exposure parameters / Buildings affected do not impact the community

Adaptive Capacity

- Subjective – need community input
- Economically viable
- Ability to relocate building infrastructure
- The ability to raise structure
- Accessibility to residents once moved (SVI)
- Land availability
- Ability to retrofit for flooding (raise generator/sensitive components)

Transportation Infrastructure

Exposure

- High weight (3): Riverine Flood and Nuisance Flood
- Med weight (2): Fire, Drought

Sensitivity

- High: >50% of structures affected by natural hazards
- Medium: 25% - 50% affected by natural hazards
- Low: <25% affected by natural hazards

Adaptive Capacity

- Subjective – need community input
- Replacement cost
- Detour length
- Disruption duration
- FHWA roadway functional classification (roadways with higher functional classification may cause greater system disruptions if damaged)
- Evacuation routes
- Emergency services/freight route
- Access to food and services (supermarkets, bottled water, prescriptions, batteries, critical goods)
- Historical repair cost
- Access to critical areas (roads that provide the only access to critical areas are more significant to the adaptive capacity of larger response systems)

Sewer Infrastructure & Utility System Infrastructure (Sewer/Water/Electric/Communications)

Exposure

- Weighted value (3): Riverine Flood, Nuisance Flood, and Drought
- Weighted value (2): Fire

Sensitivity

- High: > 66% Exposure and/or Age >30 yrs. and structural repair needed
- Medium: 33% - 66% Exposure and/or Age 15-30 yrs. and maintenance needed
- Low: >33% Exposure and/or Age <15 and No action needed for repair or maintenance

Adaptive capacity

- Waterlines
  - Low = 8" or greater pipe
  - Med = 4" to 6" pipe
  - High = 2" or less diameter pipe
- Subjective– need community input
- Social Vulnerability Index
- Ability to relocate utility infrastructure (Ex. From 25-yr to 50-yr floodplain)
- The ability to increase capacity
- Ability to retrofit infrastructure to be more resilient to flooding

Natural Resources (Streams, Wetlands, Managed Areas, Natural Areas)

Exposure

- Average Score of exposure parameters

Sensitivity (Increased flooding due to deforestation or removal of buffers and no ability to replace)

- High: Buffer <50 ft / 50 ft from structure / 50% affected
- Med: Buffer <50 ft and >100 ft / 100 ft from structure / 25%-50%
- Low: Buffer >100 ft / >100 ft from structure / >25%

Adaptive Capacity

- Wetlands/ Open Areas
  - Low = Less than 5 ac.
  - Med = >5 - <15 ac.
  - High= >15 ac.
- Stream
  - Low = Less than 3000 ft
  - Med = >3000 ft and <10,000 ft
  - High = >10,000 ft
- Restorative capacity
- Ability to increase flood capacity
- Alternative use capacity (Ex. Park and floodplain)

ESTIMATING RISK

In order to estimate risk to critical assets, supplemental data was gathered in addition to what was available from the hazard mitigation and a quantitative tool was utilized.

Asset Values

The following critical assets and natural infrastructure were assigned a rough estimate of monetary value using the identified methodology. Assets were only valued if they were in Ahoskie's jurisdiction (city limits or ETJ).

Table 2. Risk Estimate Methodology and Sources

Critical Asset or Natural Infrastructure	Methodology and Sources
Law Enforcement	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Fire and EMS Stations	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Government Services	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Food	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Water System	$57.73 per linear foot of water line (Uni-Bell PVC Pipe Association) + $7,000 per fire hydrant + $506,104 per water storage tank (Landmark) + $57,500 per public water supply well (Landmark) + tax value of water treatment plant (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Wastewater System	$110 per linear foot of sewer line (Next Level Pipe Lining) + $250,000 per pump station (Water Level Controls) + $5,015 per manhole (Buncombe County) + tax value of head station (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC) + refinance value of wastewater treatment plant (Town of Ahoskie)
Electric System	$73.86 per linear foot of electric transmission lines (Power Grid International) + tax value of electric substations (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Propane Suppliers	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Roads	$8,650,000 per mile of roadway (NCDOT average cost)
Bridges	$4,800,000 per bridge (NCDOT average cost from Improving Replacement Cost Data for NCDOT Highway Bridges, Microsoft Word - FinalReportRP2017-09, ncdot.gov)
Railroad	$2,000,000 per mile of railroad (National Academies Press)
Medical	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Schools	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)

Libraries	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Community Buildings and Facilities	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Downtown Commercial Districts	Sum of tax value of each property in district (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Affordable Housing Areas	Sum of tax value of each property (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Wetlands	$76,150.13 per acre for non-coastal wetlands (NC Division of Mitigation Services rate schedule, Current Rate Schedules | North Carolina Department of Environmental Quality)
Streams	$740.09 per linear foot (NC Division of Mitigation Services rate schedule, Current Rate Schedules | North Carolina Department of Environmental Quality)
Parks/Public Land	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)
Managed Areas	Sum of tax value of each critical asset (Hertford County 2023 tax values, GIS / Land Records |Hertford County, NC)

Table 3. Risk Estimate Worksheet

Critical Asset or Natural Infrastructure	Number of Critical Assets or Areas at Risk	Estimated Monetary Value
Law Enforcement	1 building/property	$1,565,695
Fire and EMS Stations	2 buildings/properties	$1,275,844
Government Services	9 buildings/properties	$4,144,372
Food	6 buildings/properties	$13,863,618
Water System	224,510 linear feet of water lines, 240 fire hydrants, 3 water storage tanks, 7 water supply wells	$16,561,774
Wastewater System	244,549 linear feet of sewer lines, 878 manholes, 32 pump stations, 1 wastewater treatment plant, 1 head station	$51,357,670
Electric System	284,592 linear feet of electric lines, 1 electric substation	$24,082,377
Propane Suppliers	3 buildings/properties	$1,002,286

Roads	53.9 linear miles	$466,235,000
Bridges	3 buildings/properties	$14,400,000
Railroad	4.83 linear miles	$9,659,900
Medical	14 buildings/properties	$34,746,625
Schools	5 buildings/properties	$36,541,757
Libraries	1 building/properties	$128,393
Community Buildings and Facilities	3 buildings/properties	$1,258,036
Downtown Commercial District	113 tax parcels (most parcels contain buildings, some do not)	$8,388,538
Affordable Housing Areas	504 tax parcels (some parcels contain multi-unit housing)	$39,365,170
Wetlands	1,071.4 acres	$81,587,249
Streams	75,543 linear feet	$55,908,619
Parks/Public Land	6 properties	$2,470,814
Managed Areas	2 properties	$99,596

Refer to Appendix C for Risk and Vulnerability Assessment Materials.

PROJECT PORTFOLIO

The assembled project portfolio details eight (8) shovel-ready priority projects, addressing hazards, type of strategy area and approach, priority rating, potential sources of funding, cost and project duration estimates, project map(s), project description, and project scope. These projects were developed to coincide with the top priority solution that would help make the community more resilient to the hazards identified: riverine flooding, nuisance flooding, drought, and wildfire. One nature-based or hybrid solution project is eligible to move forward into Phase 3 of the RCCP, Engineering and Design. The Town of Ahoskie CAT, along with stakeholders, choose to move forward with the Stormwater Action Plan. This will be combined with the Upgrade Stormwater System project, the most popular project based upon Phase 2 Open House input, to move forward into Phase 4 implementation. Steps taken to assemble the project portfolio that led to the community and the CAT choosing this project are outlined below.

IDENTIFY A SUITE OF POTENTIAL PROJECT SOLUTIONS

The first step to assembling the project portfolio was to identify a suite of potential solutions. The contractors helped the CAT identify 35 potential solutions. The Albemarle Sound Hazard Mitigation Strategies identified an additional 21 potential solutions that could also be carried forward. These solutions were categorized by Planning/Policy, Green and Hybrid Infrastructure Solutions, and Hard/Grey Infrastructure Solutions and presented to the CAT at Meeting 4. Each CAT member then identified their top solutions.

CONSOLIDATE AND PRIORITIZE PROJECTS

The second step in assembling the project portfolio was to consolidate and prioritize the project solutions. The CAT identified nine (9) solutions from the suite of potential solutions that could move forward based on the STAPLEE Method and a simple benefit/cost rating system to help consolidate and prioritize all the potential project solutions. The STAPLEE Method assesses the social, technical, administrative, political, legal, economic, and environmental aspects and potential impacts of each project solution. The benefit/cost rating system used a high/medium/low scoring system to predict benefits and costs of each project solution.

Potential priority projects were presented to the CAT during the 5th meeting where the STAPLEE and benefit/cost rating metrics were reviewed and finalized. These projects were then brought to the community for additional feedback at the Phase 2 Public Open House. The Town of Ahoskie along with the CAT identified eight (8) priority projects to be presented in the project portfolio.

Priority Projects

- Stormwater Action Plan and Stormwater System Upgrade (combined project to advance to Phase 3 and Phase 4 applications)
- Backup Generators at Critical Facilities
- Stream Cleanout

- Green Stormwater Infrastructure at the R.L. Vann Center
- Retrofit or Relocate Town Hall
- Green Stormwater Infrastructure at Public Housing Developments
- Stormwater Wetland at the Ballfields in Ahoskie Creek Recreation Complex
- Green Stormwater Infrastructure on Town-owned property

Stormwater Action Plan and Stormwater System Upgrade (combined project to advance to Phase 3 and Phase 4 applications)

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Stormwater Action Plan – Stormwater System Upgrade

Project Summary	
Project Description	Develop a Stormwater Action Plan combined with strategically upgrading the stormwater system through improved and expanded infrastructure. The project will establish mapping and condition assessments for stormwater system components and outfalls with a focus on known problem areas and areas identified via a desktop analysis. The project will promote proactive stormwater maintenance through development of interactive mapping tools and maintenance guidance. The project will encourage stormwater quality awareness through public outreach efforts and produce construction drawings for a priority project.
Project Scope	Engineering/Design - Develop a Stormwater Action Plan. This plan will complete a stormwater ground assessment and surface hydrology analysis that will be incorporated into an online mapping system that can submit real-time data to analyze, prioritize, and take action on a problem area. The plan will also incorporate a maintenance plan that will be tracked by the online tool. The plan will include assessing and documenting the type and location of stormwater infrastructure, collecting and analyzing data on the hydraulic flow, assessing stormwater system capacity and functionality, and identifying projects to upgrade the system and improve the ability of the system to convey water and/or improve water quality. Both hard/grey infrastructure and green/nature-based solutions will be considered in the Stormwater Action Plan. A public education campaign on stormwater responsibilities will also be included. Design and Construction drawings will be completed for one project chosen in partnership with the community. - Hydro Analysis / vulnerability assessment - Field Work - Natural Resource Technical Report - Project Prioritization/Recommendations - Arc Online Tool - Stormwater Maintenance Manual - Public Education Campaign – Stormwater Responsibilities - Permitting Due Diligence - Project Surveys / Utility Locations - Project Engineering/Design Implementation - Strategically upgrade the stormwater system through pipe replacements (upsizing where needed), increasing the size and quantity of

	culverts and catch basins, redefining ditches, implementing backflow preventors, installing bioswales, bioretention cells, etc. The previously developed Stormwater Action Plan will determine project prioritization. - Permitting - Construction - Construction Administration - Construction Inspections
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) <u>Stormwater Action Plan</u> ▪ Planning ▪ Green and Hybrid Solutions <u>Stormwater System Upgrade</u> ▪ Green and Hybrid Solutions
Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Build Adaptive Capacity ▪ Accommodate
Project Estimated Cost	<u>Engineering/Design</u> - $500,000 <u>Implementation</u> - $200,000 - $750,000 (per stormwater retrofit)
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation <u>Stormwater Action Plan</u> ▪ NC Resilient Coastal Communities Program Phase 3 ▪ Federal Emergency Management Agency (FEMA) Building Resilient Infrastructure in Communities (BRIC) Capability and Capacity Building (C&CB) Grant ▪ NC Department of Environmental Quality Water Resources Development Grant (WRDG) <u>Stormwater System Upgrade</u> ▪ NC Resilient Coastal Communities Program Phase 4 ▪ Federal Emergency Management Agency (FEMA) Building Resilient Infrastructure in Communities (BRIC) Grant ▪ Federal Emergency Management Agency (FEMA) Flood Mitigation Assistance (FMA) Grant ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant

	▪ NC Department of Environmental Quality Water Resources Development Grant (WRDG) ▪ NC Department of Environmental Quality 319 Grant ▪ HUD Community Development Block Grant – Mitigation (CDBG-MIT)				
Project Estimated Timeline	3 – 10 years (project may be completed in phases)				
Priority Rating	High				
Potential Submission for RCCP Phase 3	♦	Yes		No	*Project must be a nature-based solution or hybrid solution to be considered for RCCP Phase 3.*

Backup Generators at Critical Facilities

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Backup Generators at Critical Facilities

Project Summary	
Project Description	The purchase and installation of backup generators at critical facilities.
Project Scope	Current generator needs include public water supply wells (7), sewer lift stations (32), and Town Hall (no generators in place). Facilities needing replacement generators include the Police Department, Public Works building, and the Fire Department. Establish back-up generators at all identified critical facilities and replace aging generators that are no longer operating efficiently. This would include developing a regularly scheduled equipment evaluation and maintenance method to ensure the generators continue to meet operational demands at town facilities.
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine) ▪ Wildfire
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Hard/Grey Infrastructure
Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Build Adaptive Capacity
Project Estimated Cost	1 – 100 kw: $50,000 each with installation 42 – 50 kw generators: $35,000 each with installation
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation ▪ FEMA Hazard Mitigation Grant Program (HMGP) ▪ FEMA Pre-Disaster Mitigation Grant Program ▪ Golden Leaf Grant ▪ HUD Community Development Block Grant – Mitigation (CDBG-MIT)
Project Estimated Timeline	1-2 years
Priority Rating	High

Potential Submission for RCCP Phase 3		Yes	♦	No	*Project must be a nature-based solution or hybrid solution to be considered for RCCP Phase 3.*

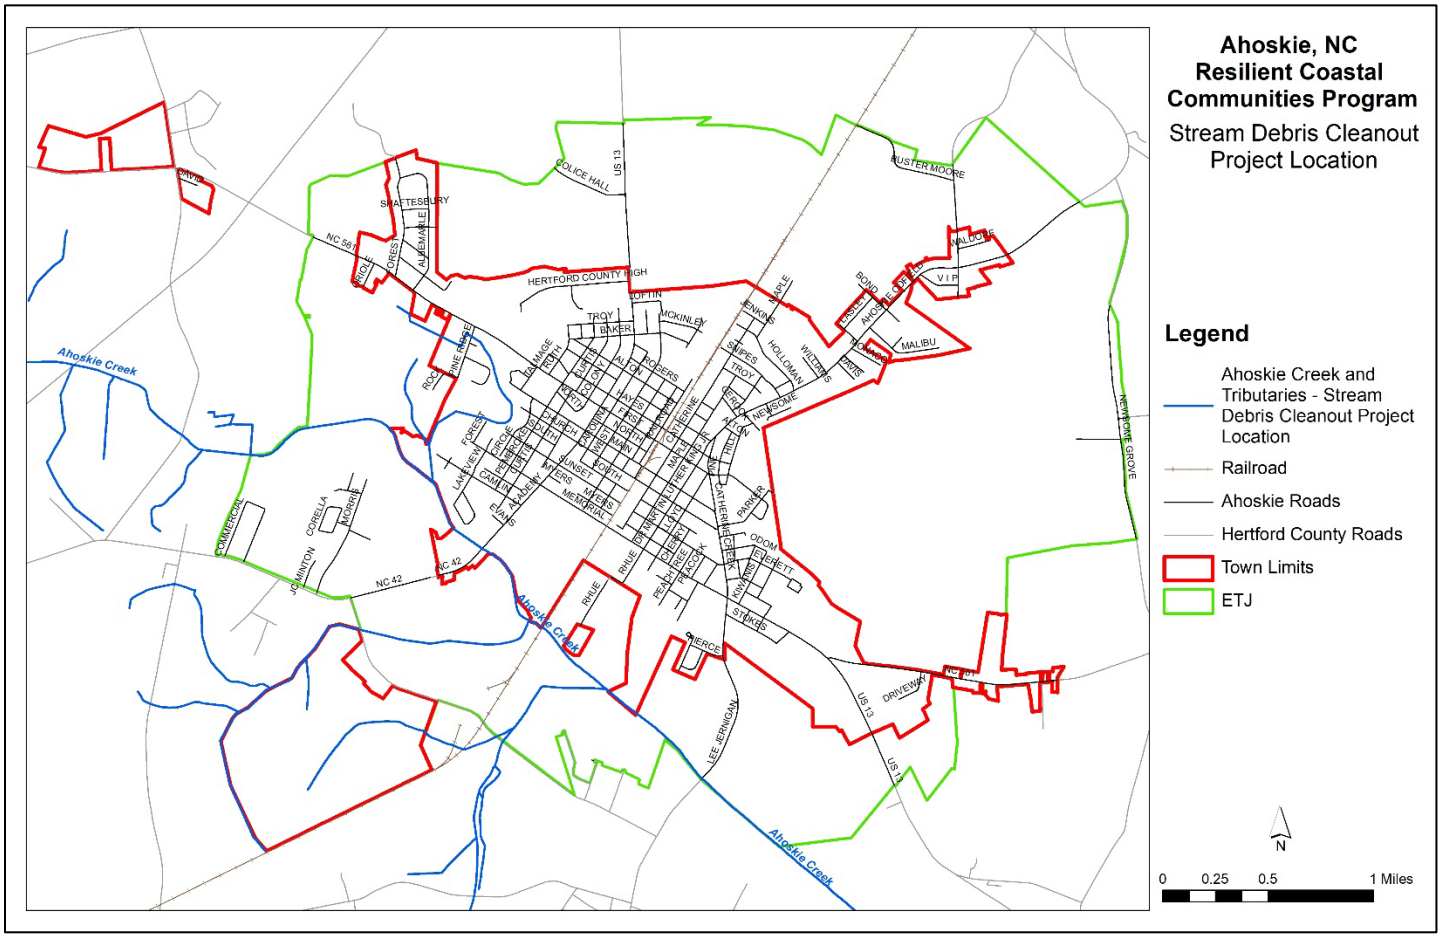
Stream Cleanout

Project Summary	
Project Description	Inspect debris blockage problems and secure funds for the clearance of debris from rivers, streams and tributaries. This would include Ahoskie Creek and its tributaries with a primary focus on Ahoskie Creek to increase drainage flow within the watershed.
Project Scope	Plan and implement a stream cleanout using the U.S. Army Corps of Engineers 1992 Woody Removal Guide and the NRCS Conservation Practice Standard – Clearing and Snagging (code 326) document. Only those log accumulations that are obstructing the flow of water shall be removed. This includes downed trees, broken tops and woody/vegetative debris that has fallen into the stream beds and is restricting water flow and/or contributing to flooding with heavy rains. Minimal disturbance to stream banks is required, therefore; hand-operated equipment will be the first choice in removal, such as winches, chain saws, shallow draft barge, or boat. Current requirements include all debris located within the 100-year flood plain must be removed from the flood plain or place a minimum of 30' from the top of the stream bank and strapped in place. Beavers will be eradicated, and dams will be removed in the cleanout process.
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Hybrid/Green Infrastructure Solution
Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Build Adaptive Capacity ▪ Accommodate
Project Estimated Cost	Up to $25 / linear foot (currently StRAP funds pay $10.80 / linear foot for coastal streams)
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation ▪ NC Dept. of Agriculture Streamflow Rehabilitation Assistance Program (StRAP) ▪ NCDEQ Stream Debris Removal Program

Project Estimated Timeline	1-2 years				
Priority Rating	High				
Potential Submission for RCCP Phase 3	♦	Yes		No	*Project must be a nature-based solution or hybrid solution to be considered for RCCP Phase 3.*

Project Map



Green Stormwater Infrastructure at the R.L. Vann Center

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Green Stormwater Infrastructure at R.L. Vann Center

Project Summary	
Project Description	Engineer, design, and construct low impact development (LID) stormwater infrastructure at the R.L. Vann Community Resource Center.
Project Scope	Engineering/Design – Identify appropriate projects and complete designs for a LID stormwater infrastructure facility at the R.L. Vann Center. This important resource is located in Ward B. and provides support and assistance to the surrounding community. Elements of this project could include stormwater wetlands, rain gardens, bioretention cells, and vegetative plantings. This project will include an educational component such as signage and the development of materials for community residents, local officials and developers. - Hydro analysis - Natural Resources Assessment - Concept Planning - Engineering/Design - Permitting Due Diligence Implementation – Construct projects identified in the engineering/design phase. Elements of this project could include stormwater wetlands, rain gardens, bioretention cells, and vegetative plantings. - Permitting - Construction - Construction Administration - Construction Inspections
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)

Retrofit or Relocate Town Hall

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Retrofit or Relocate Town Hall

Project Summary	
Project Description	Retrofit or relocate Town Hall to mitigate flood events.
Project Scope	Engineering/Design – Develop a Feasibility Study which conducts a facility assessment to determine the best solution to resolve basement flooding of the existing Town Hall. The resulting engineering/architecture/design scope will vary depending on assessed needs. The building could possibly be retrofitted, or a site for relocation of Town Hall may be determined. Flooding has periodically required that the Town Hall be closed, affecting town operations. In addition, flooding has caused mold in the basement and the need for remediation which could occur again if another major storm floods the basement, constituting a public health risk. The town's preference is to retrofit the existing historic Town Hall. - Facility Assessment - Feasibility Study - Engineering/Design (Retrofit for flooding relief or new building at alternative site. Architectural and landscaping design included if new site.) Implementation – The retrofitting or relocation of Town Hall, to be determined by the Feasibility Study and engineering/design phases. - Permitting - Construction - Construction Administration - Construction Inspections
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Hard/Grey Infrastructure

Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Avoid ▪ Accommodate ▪ Retreat ▪ Protect				
Project Estimated Cost	Feasibility Study - $75,000 Engineering/Architectural/Design – $120,000 – $400,000 Implementation – $250,000 - $3,500,000				
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation ▪ FEMA Flood Mitigation Assistance (FMA) Grant ▪ FEMA Building Resilient Infrastructure in Communities (BRIC) Grant ▪ FEMA Hazard Mitigation Grant Program (HMGP) ▪ Golden Leaf Foundation ▪ HUD Community Development Block Grant – Mitigation (CDBG-MIT)				
Project Estimated Timeline	1-3 years

Green Stormwater Infrastructure at Public Housing Developments

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Green Stormwater Infrastructure at Public Housing Developments

Project Summary	
Project Description	Implement green stormwater infrastructure throughout public housing developments owned by Ahoskie Housing Authority. 1.) Pierce Ave. / Burden St. / Vinson Dr. 2.) Parker Ave. / E First St.
Project Scope	Engineering/Design – Assess both public housing developments owned by the Ahoskie Housing Authority and develop Feasibility Studies to identify appropriate projects to relieve flooding. Complete engineering/design for identified solutions which could include hard/grey infrastructure elements (raising houses) and green stormwater infrastructure. Green stormwater infrastructure could include permeable parking, bioretention cells, etc. Educational signage will also be included. Feasibility Studies will be followed by engineering/design of construction ready projects for the two public housing developments. - Site Assessment - Hydro Analysis - Feasibility Study - Concept Planning - Engineering/Design - Permitting Due Diligence Implementation – Construct identified flood mitigation / green stormwater infrastructure projects. Specific projects and placement will be determined during Feasibility Study and engineering/design phases. Educational signage will also be included. - Permitting - Construction - Construction Administration - Construction Inspections
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Green and Hybrid Solutions

Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Accommodate				
Project Estimated Cost	Feasibility Study - $75,000 Engineering/Design – $150,000 - $250,000 Implementation – $200,000 - $1,000,000 / project				
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation Engineering/Design ▪ NC Resilient Coastal Communities Program Phase 3 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC Water Resources Development Grant ▪ FEMA Flood Mitigation Assistance (FMA) Grant ▪ FEMA Hazard Mitigation Grant Program (HMGP) Implementation ▪ NC Resilient Coastal Communities Program Phase 4 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC Water Resources Development Grant ▪ FEMA Flood Mitigation Assistance (FMA) Grant ▪ FEMA Hazard Mitigation Grant Program (HMGP)				
Project Estimated Timeline	4-5 years (engineering/design and construction)				
Priority Rating	High				
Potential Submission for RCCP Phase 3	♦	Yes		No	*Project must be a nature-based solution or hybrid solution to be considered for RCCP Phase 3.*

TOWN OF AHOSKIE

Stormwater Wetland at the Ballfields in Ahoskie Creek Recreation Complex

Project Summary	
Project Description	Design and construct a stormwater wetland west of the ballfields at the Ahoskie Creek Recreation Complex.
Project Scope	Engineering/Design – The design of a forested wetland (4 acres) with a 1,200 ft trail system that mimics the functions of natural wetlands and uses physical, chemical, and biological processes to treat stormwater pollution. Educational signage will be included. This feature will help relieve sogginess on the ball fields after heavy rain events along with improving water quality into Ahoskie Creek. - Survey - Natural Resources Assessment - Concept Design - Hydro Analysis - Engineering/Design - Permitting Due Diligence Implementation – Construct a forested wetland to reduce flooding and improve water quality. Include a trail system with educational signage. Improvements could include grading, planting trees and other vegetation. - Permitting - Construction - Construction Administration - Construction Inspections Monitoring – 5 yr. monitoring period to assess the success of the wetland system. This is also a mitigation eligibility requirement since the Ahoskie Recreation Complex is a FEMA buyout property. The wetland can also be used to provide wetland banking mitigation credits should the town need credits to offset other development projects. - Hydrology Monitoring - Vegetation Quadrate Monitoring - Yearly Reports

Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Green and Hybrid Solutions
Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Build Adaptive Capacity ▪ Protect
Project Estimated Cost	Engineering/Design – $130,000 Implementation – $500,000 – $1,200,000 Monitoring - $25,000 - $35,000 / year
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation Engineering/Design ▪ NC Resilient Coastal Communities Program Phase 3 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC DEQ Water Resources Dev. Grant (WRDG) Implementation ▪ NC Resilient Coastal Communities Program Phase 4 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC DEQ Water Resources Dev. Grant (WRDG)
Project Estimated Timeline	2-3 years (engineering/design and construction)
Priority Rating	High
Potential Submission for RCCP Phase 3	♦ Yes No — *Project must be a nature-based solution or hybrid solution to be considered for RCCP Phase 3.*

Green Stormwater Infrastructure on Town-owned property

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

TOWN OF AHOSKIE

Green Stormwater Infrastructure on Town-owned Property

Project Summary	
Project Description	Complete a Feasibility Study with concept designs followed by strategically designing and constructing green stormwater infrastructure on Town-owned property.
Project Scope	Engineering/Design – Develop a Feasibility Study including site analysis of all town owned properties, identification of appropriate projects and concept designs as the first stage. Complete engineering/design for green stormwater infrastructure on town-owned property as the second stage to develop construction ready designs. There are several parcels where impermeable surfaces could be removed, bioretention cells could be installed, trees could be planted, stormwater infiltration medians, permeable parking, etc. - Site Analysis - Feasibility Study - Concept Planning - Engineering/Design - Permitting Due Diligence Implementation – Construct identified green stormwater infrastructure projects. Specific projects and placement will be determined during Feasibility Study and engineering/design phases. - Permitting - Construction - Construction Administration - Construction Inspections
Hazard(s) Addressed by Project	List Hazards Specific to the Community Which Impact the Project Location (Refer to Hazard Mapping) ▪ Flooding (Nuisance, Riverine)
Type of Solution/Strategy Area	List Strategy Area Column(s) from Matrix (e.g., Policy, Planning, Green and Hybrid [Nature-Based] Solutions, Hard/Grey Infrastructure) ▪ Green and Hybrid Solutions
Type of Strategy Approach	List Strategy Approach from Matrix (e.g., Avoid, Accommodate, Protect, Retreat, Build Adaptive Capacity) ▪ Accommodate

Project Estimated Cost	Feasibility Study – $100,000 Engineering/Design – $60,000 - $175,000 (per project) Implementation – $200,000 – $1,000,000 (per project)				
Potential Implementation Funding Sources	Potential Sources for Project/Action Implementation Engineering/Design ▪ NC Resilient Coastal Communities Program Phase 3 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC Water Resources Development Grant Implementation ▪ NC Resilient Coastal Communities Program Phase 4 ▪ NC Environmental Enhancement Grant (EEG) ▪ NC Land and Water Fund Grant ▪ NC Water Resources Development Grant

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

Town of Ahoskie

Community Action Team - Meeting Framework

Each meeting is anticipated to be approximately 2-hours in duration. Meeting dates, times and locations are noted below. The review of relevant RCCP materials and CAT coordination will occur between each meeting. Meeting agendas will be provided in advance of each meeting. Meeting topics are subject to change as additional topics or needs are identified.

PHASE 1 COMMUNITY ENGAGEMENT AND RISK/VULNERABILITY ASSESSMENT

MEETING 1

Date: Thurs. Oct. 5, 2023

Time: 2:00 – 4:00 pm

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

VISION AND GOALS, EXISTING PLANS & COMMUNITY ENGAGEMENT

Phase 1, Step 1: Form Community Action Team

- A. Introduce team members and contractors.

Phase 1, Step 2: Review Existing Plans and Efforts

- A. Review existing plans, ordinances, policies, and programs, including Pamlico Sound Regional Hazard Mitigation Plan.
- B. Compile information on critical assets, natural resources, social vulnerability, risk assessments, and resiliency related projects.
- C. Identify and document additional data and resources necessary to complete the community's Risk and Vulnerability Assessment.

Phase 1, Step 3: Set Vision and Goals

- A. Review community plans and Hazard Mitigation Plan for resiliency vision and goal statements.
- B. Identify example resiliency vision and goal statements.
- C. Develop community-specific visions and goals.

Phase 1, Step 4: Develop a Community Engagement Strategy

- A. Identify audiences/stakeholders, including vulnerable populations.
- B. Identify tools, techniques, and strategies for informing and engaging the community, including a targeted approach for reaching vulnerable populations.
- C. Develop a community engagement strategy and schedule.

MEETING 2

Date: Thurs. Nov. 2, 2023

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

EXISTING CONDITIONS – CRITICAL ASSETS & NATURAL INFRASTRUCTURE

Phase 1, Step 5: Map Critical Assets and Natural Infrastructure

- Review inventory of critical assets and natural infrastructure.
- Review and discuss critical assets, natural resources, social vulnerability, available risk assessments, and resiliency related projects.
- Review draft mapping of critical assets and natural infrastructure.
- Select critical assets and natural infrastructure to include in the RCCP Risk and Vulnerability Assessment.
- Discuss hazards to include in the Risk and Vulnerability Assessment.

MEETING 3

Date: Thurs. TBD

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

RISK & VULNERABILITY ASSESSMENT & PUBLIC MEETING PLANNING

Phase 1, Step 6: Conduct Risk and Vulnerability Assessment

- A. Identify and map the hazards.
  - 1. Review hazard mapping including hazards overlaid with critical assets and natural resources.
- B. Assess Vulnerability
  - 1. Review vulnerability index to measure exposure, sensitivity and adaptive risk for critical assets and natural infrastructure.
  - 2. Complete vulnerability worksheets.
- C. Estimate Risk
  - 1. Complete quantitative risk worksheets.
- *Community Engagement:* Plan a Public Open House to engage the community during Phase 1. Two-week public comment period required before moving into Phase 2.

PHASE 2 PLANNING, PROJECT IDENTIFICATION, AND PRIORITIZATION

MEETING 4

Date: Thurs. TBD

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

SUITE OF POTENTIAL STRATEGIES

Phase 2, Step 1: Identify a Suite of Potential Solutions

- A. Review the community's plans and other local sources for previously identified projects.
- B. Brainstorm a suite of potential solutions.
- C. Capture a suite of innovative solutions that can be used to apply for funding or self-funding.
- D. Link various strategies to the Phase I Risk Assessment with those being most vulnerable or most at risk
- E. Collaborate to further define the solutions.
- F. Discuss development of resiliency projects and actions portfolio.

MEETING 5

Date: Thurs. TBD

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

PRELIMINARY PROJECT PRIORITIZATION & PUBLIC MEETING PLANNING

Phase 2, Step 2: Consolidate and Prioritize Projects

- A. Describe strategies.
- B. Evaluate strategies and their feasibility (STAPLEE method).
- C. Conduct an informal cost-benefit analysis to review proposed strategies.
- D. CAT to review strategies and discuss preliminary project priorities.
- *Community Engagement:* Plan a Public Open House to engage the community during Phase 2 and obtain input on strategies and priorities. One-week public comment period following Open House.

MEETING 6

Date: Thurs. TBD

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

PUBLIC INPUT & DRAFT RESILIENCE STRATEGY ELEMENTS

Phase 2, Step 2: Consolidate and Prioritize Projects (continued)

- A. Consider public input and select priority projects.
- B. Identify at least five (5) priority projects for final project portfolio.
- C. Discuss project sites and details for each priority project.
- D. Collaborate on priority project templates.

MEETING 7

Date: Thurs. TBD

Time: TBD

Location: Council Chambers at Ahoskie Fire Dept., 301 S. Martin Luther King Jr. Dr. Ahoskie, NC 27910

RESILIENCE STRATEGY DOCUMENT

Phase 2, Step 3: Develop the Resilience Strategy Document

- A. High level review of Resilience Strategy document.
- B. Review priority project portfolio.
- C. Discuss RCCP Phase 3 and 4 application process.
- D. Pick one nature-based or hybrid project to apply for Phase 3 & 4 funding.
- E. Vote on endorsement of Resilience Strategy document.

RESILIENCY STRATEGY DOCUMENT

Following Meeting 6, the Contractor team will develop the Town of Ahoskie Resilience Strategy Document. Elements of the document will be shared with the CAT as developed throughout the planning process. The CAT will be provided the entire draft Resilience Strategy Document for review and comment before the plan is finalized.

Thank you for participating on the Town of Ahoskie Community Action Team!
We appreciate your involvement as we plan for a more resilient community.

North Carolina
RESILIENT COASTAL COMMUNITIES PROGRAM

Town of Ahoskie

Community Action Team - Meeting #1

AGENDA

Thursday, Oct. 05, 2023, 2:00 - 4:00 PM

Location: Ahoskie Council Chambers at Ahoskie Fire Dept., 301 S Martin Luther King Jr. Drive, Ahoskie, NC 27910

2:00 – 2:15 PM	**Introduction to Resilient Coastal Communities Program** ▪ Introduction of contractors and team members ▪ Review of Resilient Coastal Communities Program ▪ Review of Community Action Team meeting schedule and tasks ▪ See Community Action Team Meeting Framework document
2:15 – 2:30 PM	**Review of Existing Plans and Ordinances**
2:30 – 2:50 PM	**Community Vision Statement Exercise** ▪ Review Vision Statements from adopted plans and other vision statement examples ▪ Exercise: Community Vision Statement
2:50 – 3:15 PM	**Community Goals Exercise** ▪ Review goals from adopted plans and other resiliency goal examples ▪ Goals should address all three points; economic, environmental, social ▪ Exercise: Community Goals
3:15 – 3:30 PM	**Social Vulnerability Data**
3:30 – 3:50 PM	**Community Engagement Strategy** ▪ Public Survey ▪ Public Open House ▪ Strategies to engage the community, including vulnerable populations
3:50 – 4:00 PM	**Discussion / Adjournment**

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #1

MEETING SUMMARY

THURSDAY, OCTOBER 5, 2023, 2:00 PM - 4:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Tris Ford, RK&K
- Sarah Spiegler, NC Sea Grant
- Mackenzie Todd, NC Division of Coastal Management
- Leigh Etheridge, Town of Ahoskie
- Roy Sharpe, Town of Ahoskie
- David Hunt, Town of Ahoskie
- Hunter Smith, Town of Ahoskie
- Pat Byrd, RCCWTC
- Morgan Askew, Town of Ahoskie
- John Rawls, Town of Ahoskie
- Jennifer Bracy, Town of Ahoskie

Meeting Purpose:

- Introduction of contractors and team members
- Review of Resilient Coastal Communities Program
- Review of Community Action Team meeting schedule and tasks
- Review of existing plans and ordinances
- Review vision statements from adopted plans and other vision statement examples
- Exercise: Community Vision Statement
- Review goals from adopted plans and other resiliency goal examples
- Exercise: Community Goals
- Review social vulnerability data
- Plan Community Engagement Strategy

Notes:

- All team members introduced themselves.
- Jamie Heath presented overview of Resilient Coastal Communities Program.
- Existing plans and ordinances were reviewed.
- Example vision statements were reviewed.

- The Community Vision Statement exercise was completed and worksheets were collected. Jamie Heath stated draft vision statement would be made available for comment via email.
- Example goals were reviewed.
- The Community Goals exercise was completed and worksheets were collected. Jamie Heath stated draft goals and objectives would be made available for comment via email.
    - There was a question on whether team members not able to attend would be able to submit a worksheet. Jamie Heath stated she would follow up with them to request worksheets by email.
- Social vulnerability data was reviewed.
    - Center for Disease Control (CDC) Social Vulnerability Index data was reviewed.
        - Socioeconomic status - Group agreed that SVI seemed accurate.
        - Household characteristics – Group agreed that SVI seemed accurate.
        - Racial and ethnic minority – Group agreed that SVI seemed accurate.
        - Housing type & transportation – Group agreed that SVI seemed accurate.
    - EPA Environmental Justice Screen reports were reviewed.
    - Local census data was reviewed.
- The Community Engagement Strategy was planned, including vulnerable populations to consider and outreach methods. There will be a survey and public open house in Phase 1 and Phase 2.
    - The draft public survey for Phase 1 was reviewed. The survey will be available both online and in hard copy format.
        - Survey comments
            - Add that surveys can be dropped off at town hall.
            - Add “inside the town limits” when asking if people live or work in Ahoskie.
            - Separate into two questions, “Do you live inside the town limits of Ahoskie?” and, “Do you work inside the town limits of Ahoskie?”.
            - Under stakeholder engagement, remove mail and newsletter as options. It is too costly for a town this size to direct mail and digital outreach options are preferred by the town for cost savings.
            - Under demographics, type of housing question. Remove townhomes, none in town. Add duplex to the list instead. Also add multi-family.
    - Outreach methods were discussed.
        - Town has a website and Facebook page plus other social media. Jennifer Bracy does social media.
        - There is a project in the works where monitors will be all through town that can display events.
        - An information system is also forthcoming.
        - All listed public places will allow flyers to be posted. The food pantry is active and will allow flyer distribution as well.
        - There are good partnerships with local businesses.

North Carolina
RESILIENT
COASTAL
COMMUNITIES
PROGRAM

AHOSKIE

Community Action Team - Meeting #1

- There are good partnerships with faith based organizations.
- There is currently an electronic sign on Academy Street.
- Oct. 14th is the Fall Fling on Main Street. Survey flyers will be available at the event.
- Roanoke Chowan News Herald is the local newspaper.
- Jamie Heath stated that she could have the public survey and flyer ready before Tuesday's Town Council meeting.

North Carolina
RESILIENT
COASTAL
COMMUNITIES
PROGRAM

Town of Ahoskie

Community Action Team - Meeting #2

AGENDA

Thursday, Nov. 02, 2023, 10:00 AM - 12:00 PM

Location: Ahoskie Council Chambers at Ahoskie Fire Dept., 301 S Martin Luther King Jr. Drive, Ahoskie, NC 27910

10:00 – 10:30 AM	**Critical Assets and Natural Infrastructure** ▪ Inventory list ▪ Maps
10:30 – 10:45 AM	**Potential Hazards and Non-Climate Stressors**
10:45 – 11:00 AM	**Available Risk Assessments** ▪ From Albemarle Regional Hazard Mitigation Plan
11:00 – 11:30 AM	**Known Issues** ▪ From RCCP application ▪ Other known issues
11:30 – 11:45 AM	**Current / Past Resilience Projects**
11:45 – 12:00 PM	**Discussion / Adjournment**

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #2

MEETING SUMMARY

THURSDAY, NOVEMBER 02, 2023, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Seth Laughlin, Mid-East Commission
- Gordon Marsh, RK&K
- Tris Ford, RK&K
- Sarah Spiegler, NC Sea Grant
- Mackenzie Todd, NC Division of Coastal Management
- Kasen Wally, NC Division of Coastal Management
- Leigh Etheridge, Town of Ahoskie
- Jennifer Bracy, Town of Ahoskie
- Paul Moore II, Rock Church
- John Rawls, Town of Ahoskie

Meeting Purpose:

- Review draft critical assets and natural infrastructure inventory list and maps
- Discuss potential hazards and non-climate stressors
- Review available risk assessments
- Discuss known coastal hazard issues
- Discuss any current/past resilience projects

Notes:

- Draft critical assets and natural infrastructure inventory lists and maps
    - Noted that Hunter Smith can be contacted regarding water and sewer system GIS data. The Wooten Company assisted the town with this.
    - Noted the name should be “Drug Co. Discount Pharmacy” not “Drugo”
    - Roanoke-Chowan Community College is outside the town’s jurisdiction but close by and should be noted in schools list.
    - Noted that the Ahoskie Regional Visitor’s Center and Ahoskie Museum suffered water damage and has temporarily relocated to “The Gathering Place”. They will move back into the building once repaired.
    - Noted to add “The Gathering Place” under community buildings.

  - Other critical assets seemed accurate.
  - Under parks/public land, add "No Man's Land" on Main Street. Events are held there and the Veteran's Statue is located there. At the intersection of Main St. and Railroad St.
  - Noted that we may need to look at endangered species, both aquatic species and terrestrial plants. Certain endangered species are known to be located in the area.
  - Other natural infrastructure seemed accurate.
  - Noted symbol is missing for Fire and EMS on legends of critical assets maps.
  - Noted to darken floodplain layers, particularly the 500-year floodplain is hard to see on map.
- Potential hazards and non-climate stressors
  - Storm surge, sea level rise, and coastal erosion are not major issues of concern for the town
  - Flooding is a concern in some areas including riverine and rainfall driven flooding. No tidal flooding. Nuisance stormwater flooding also affects some areas.
  - Damaging storms, tornadoes and winds are a concern (tornadoes not as much as winds associated with tropical storms and hurricanes)
  - Wildfire is a high risk for the area. Drought and heat waves are also a concern.
  - For non-climate stressors, all were applicable, including;
    - Aging or potentially undersized infrastructure
      - Noted this is beginning to be addressed through NC DEQ's Asset and Inventory Assessment grant
    - Population dynamics
      - Noted large low income population
      - Noted that the work day population changes from 5,000 residents to 15,000 people in town for work. Ahoskie is an economic hub for the county.
    - Economic shifts
    - Increased subsidence
    - Altered drainage patterns
    - Land cover change
      - Noted large impervious area in town core
- Review available risk assessments.
  - Reviewed Hertford County risk assessment from the Albemarle Regional Hazard Mitigation Plan. No comments.
- Discussed known coastal hazard issues.
  - Noted that Stephen Lassiter can be contacted for specific flood area details if needed.
  - Reviewed known issues from RCCP application including roadways experiencing nuisance flooding and critical assets known to be at risk.

- Noted that there was flooding in Hurricane Matthew. Town Hall basement flooded and is still not usable due to the levels of mold. The Ford Dealership also flooded during Matthew. Flood maps were updated after Matthew because areas flooded that never had before.
- Noted there was some wind damage from the recent Tropical Storm Ophelia from trees falling in some neighborhoods.
- Noted that a lot of buildings on Main Street get water in during any type of rain. The doors are too close to the street and water drains right into the buildings.
- Noted to add S 4th Street and Memorial Drive as an area for nuisance roadway flooding.
- Noted that the area around Ahoskie Creek near the recreation complex is a high priority (includes Health Department). The flood area around NC-42 is a high priority as well. FEMA has not allowed redevelopment in some of these areas.
- Many of the roadways with nuisance flooding issues are in low-income areas or areas with multi-family housing. For example, at Peachtree and Memorial there is a low income housing development.
- Wildfire risk, noted that MLK Dr. to Ahoskie Cofield Rd. is a high wildfire risk area. Developments are close to the woods and houses are small and close together. There are also a lot of older homes in the area not up to current codes. The area spans parts of the town limits and the ETJ.

- Current/past resilience projects
  - The Ahoskie Recreation Complex was a FEMA buyout from Hurricane Floyd.
  - The town recently updated its Floodplain Ordinance.
  - The town's Zoning Ordinance will be updated in the near future.
  - The town will be applying for grants to evaluate the stormwater system.
  - The town will be evaluating stormwater pipes for materials in the near future.
  - There have not been any nature-based projects to date.
- Other
  - Confirmed next Community Action Team meeting for Thurs. Dec. 7th from 10:00 am – 12:00 pm.
  - Confirmed Public Open House for Phase 1 on Wed. Dec. 13th, drop-in style from 4:00 – 6:30 pm. Same location, Council meeting chambers at Fire Dept. Jamie Heath will work with Jennifer Bracy to advertise.
  - Virtual Public Open House for Phase 1 will be Fri. Dec. 15th, drop-in style from 4:00 – 6:30 pm. Will be co-hosted for all 4 of our participating communities.

11:45 – 12:00 PM	**Discussion / Adjournment**

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #3

MEETING SUMMARY

THURSDAY, DECEMBER 7, 2023, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Gordon Marsh, RK&K
- John Rawls, Town of Ahoskie
- Paul Moore Jr., Rock Church
- Christopher H. Smith, Town of Ahoskie
- Morgan Askew, Town of Ahoskie
- Jennifer Bracy, Town of Ahoskie
- Roy Sharpe, Town of Ahoskie
- David Hunt, Town of Ahoskie
- Kasen Wally, DCM

Meeting Purpose:

- Review draft hazards mapping
- Review draft vulnerability assessment
- Review draft risk estimate
- Discuss public open house activity plan

Notes:

- Draft hazards maps
    - Draft hazards maps for Ahoskie were reviewed including floodplain and wildfire risk layers overlaid with critical assets and affordable housing areas, and potential hazardous sites.
    - Noted that sea level rise and storm surge layers were not available this far inland. (Layers end at river near Windsor).
    - There was a question on leaking underground storage tanks and what they were leaking. The answer was that they are usually gas or sometimes heating fuel.
- Draft vulnerability assessment
    - Vulnerability assessment thresholds were reviewed.
    - The draft vulnerability assessment worksheet was reviewed.
    - Low-income housing should be updated to affordable housing areas.

  - Propane suppliers has a typo on the worksheet.
  - Wetlands should be exposure 3 (says 4).
  - Some affordable housing areas will be better explained on the worksheet where street names are the same.
  - Street names will be combined where needed.
  - The wastewater treatment plant and head station for the sewer system should be added and evaluated separately from the sewer system as a whole.
  - We need to add a shapefile for the head station. It is located at S Rhue St. extension.
  - The streets on the worksheet seem accurate.
  - Everett St., North St., and South St. should be added.
  - The Ahoskie Regional Visitor's Center and Ahoskie Museum should be removed. The building was rented and they are no longer using it. It is now located in the same building as The Gathering Place.
- Draft risk estimate
  - Reviewed draft risk estimate methodology and worksheet.
  - Discussed that many community-owned assets were valued based on property tax values, which some communities feel undervalues the asset.
  - WWTP (Johnny Mitchell Rd.) refinancing amount was $8,883,637. Update value to this number.
  - Need to add the value of the head station at S Rhue St. extension. These changes will increase the value of the sewer system as a whole.
  - Town staff will send updated numbers from insurance documents where applicable for better risk estimate values.
- Public open house
  - Discussed public open house and activities we will have. Open house will occur on Dec. 13th in person and Dec. 15th virtually.
- Other
  - The next Community Action Team meeting will be held Thurs. Jan. 18, 2024 at 10:00 am.

Town of Ahoskie

Community Action Team - Meeting #4

AGENDA

Thursday, Jan. 18, 2024, 10:00 AM - 12:00 PM

Location: Ahoskie Council Chambers at Ahoskie Fire Dept., 301 S Martin Luther King Jr. Drive, Ahoskie, NC 27910

10:00 – 10:30 AM	**Phase 1 Public Input Review** • Public survey response summary • Public open house feedback summary
10:30 – 11:45 AM	**Identify a Suite of Potential Solutions** • STAPLEE worksheets
11:45 – 12:00 PM	**Discussion / Adjournment**

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #4

MEETING SUMMARY

THURSDAY, JANUARY 18, 2024, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Seth Laughlin, Mid-East Commission
- Gordon Marsh, RK&K
- Jennifer Bracy, Town of Ahoskie
- Hunter Smith, Town of Ahoskie
- Morgan Askew, Town of Ahoskie
- Mike Bradley, Town of Ahoskie

Meeting Purpose:

- Review Phase 1 public input (survey and open house)
- Review draft Suite of Potential Solutions

Notes:

- Phase 1 public survey results
    - Phase 1 public survey results were reviewed. There were 36 total responses.
    - Noted some areas in the public survey results summary document where lists need to be bulleted.
    - We discussed listing text as a communication method on the next public survey.
    - There were no comments on the public survey results.
- Phase 1 public open house results
    - Phase 1 public open house results were reviewed. There was a low turnout despite a variety of advertising methods.
    - We discussed linking the next public open house to the term flooding rather than the term resilience.
    - There were no comments on the feedback received at the public open house.
    - The group discussed the possibility of having the Phase 2 public open house occur at a town event to increase attendance, but the event would have to occur in the next 3 months for this to be an option. Ms. Bracy said that the town has had better attendance doing open houses prior to Town Council meetings from 4:30 – 5:30 (Town Council meetings start at 6:00). Residents who normally attend the Council meetings are

sometimes willing to come out early. If we want to have the open house in March, the date would be Thurs. March 14th.

- Draft suite of potential solutions
  - The draft suite of potential solutions on the STAPLEE worksheets were reviewed. There was also a brief explanation of the STAPLEE scoring method which will be used to further prioritize projects at the next meeting.
  - Noted that the town wants to focus on tangible, on the ground, visible projects.
  - The town would like to focus on the "Ward B" area (voting district). This is the more socially vulnerable area of town opposite the recreation complex area. Ms. Askew provided hard copy maps showing the "Ward A" and "Ward B" districts and said she would email a digital copy. Noted that Horse Run Swamp drains to "Ward B".
  - Under policy, "Explore stormwater fee" should be removed. It is not politically feasible. Noted that the county charges a drainage fee but it seems like they are not cleaning out ditches in Ahoskie.
  - Under policy, noted that development restrictions in flood prone areas are already strict in local ordinances. Strengthening local codes/ordinances projects should be removed.
  - Discussed adding a project for a citizen participation mapping tool using Blue Spot software and ArcGIS online. For flood prone areas staff and citizens can take photos and upload to the system. They can track flooding based on rainfall events.
  - Under planning, "Stormwater assessment". Noted that there was a stormwater assessment done in the early 2000s, possibly by the Wooten Company. They recommended a pumping station but there was nowhere to pump to unless it was unrealistically far away. Ms. Bracy said she would see if she can locate a copy of that assessment.
  - Under planning, discussed adding a project to map the stormwater system (the town is working off dated paper maps).
  - Under green and hybrid infrastructure, add a green stormwater infrastructure project at the RL Vann Community Center. The town has an existing partnership with the center and also owns some land behind it. It is located in "Ward B" where the town would like to focus their RCCP project. It should be paired with an educational component.
  - Under green and hybrid infrastructure solutions, "Ahoskie Creek stream restoration". Noted that snag and drag is needed and dredging is also needed as the creek has filled in with sand over the years.
  - Under green and hybrid infrastructure solutions, "Incorporate green stormwater infrastructure in the downtown commercial district". Noted that downtown district is a priority and it is in both Ward A and B.
  - Under green and hybrid infrastructure solutions, "Increase stormwater capacity along railroad." Noted that Horse Run Swamp runs beside the railroad bed and flows north to the Chowan River.

- Under green and hybrid infrastructure solutions, “Install permeable parking through the town.” Noted that the school or the RL Vann Community Center may be good opportunities.
- Under green and hybrid infrastructure solutions, “Rails to trails project on abandoned rail line located.” Should say located downtown.
- Under green and hybrid infrastructure solutions, “Partner with property owners and NC Forest Service to perform controlled burns and brush clean out from…” This should be removed because it is already being done.
- Under hard/grey infrastructure solutions, “Install fire watch tower/emergency sirens” should be removed. There are good partnerships around fire already. The Forest Service took the tower down because now they use drones. The town has a drone as well. The town already participates in events to educate the public on fire awareness and also gets out into the local schools. Open burning is also prohibited in town.
- Under hard/gray infrastructure solutions, “Retrofit or relocate the Hertford County Health Department” should be removed since it is a county responsibility.
- Under Albemarle Regional Hazard Mitigation Plan, “HER3 Maintain, and where necessary establish back up generators at all identified critical facilities” should be moved up. The town has generator needs. Most of the generators are aging and constantly needing to be worked on. The generator for the Fire Department is now out of commission. Public Works has some generators but most are aging and becoming more unreliable. The Police Department generator is the only one currently not in need of replacement.”
- Asked CAT members to turn in STAPLEE worksheet comments if desired and they will be incorporated into prioritization.

- Other
  - Noted that the town does handle their own building inspections.
  - Noted that there are some educational pamphlets placed in water bills.
  - Noted that the area behind the post office is a problem for stormwater flooding. Located in “Ward A”.
  - Noted that easements for ditches are generally already set up.
  - Noted that there was extreme flooding in Floyd and people had to be rescued by boat. Isabella was a bad hurricane in the area for wind damage. Irene and Matthew both caused flooding.
  - Noted that the town gets lots of complaints about clogged storm drains. There is lots of pine straw from trees in some areas. The clogged drains cause stormwater flooding. The town does not have the manpower to constantly clean out all storm drains and it would be ideal if residents would keep storm drains in front of their properties clear.
  - Noted that Ahoskie experiences flash flooding in different areas depending on intensity and location of rainfall. Sometimes one area will flash flood but stays dry in the next storm while another area flash floods.

- Noted that a one inch rainfall event roughly doubles the WWTP intake. Sometimes rainfall causes WWTP capacity to be exceeded but in this case they can utilize the pond/spray field. It is not a combined system. Pipes are infiltrated due to age. Sewer system upgrades needed. Staff spends the night at the WWTP during heavy rain events to monitor.
- Noted that the emergency alert system is good. The county has the Code Red system. The town implemented the Connect Ahoskie program to send alerts.
- Noted to remove John Rawls from CAT member list.
- We will contact the town and send everyone an email and calendar invite to schedule CAT meeting 5.

North Carolina
RESILIENT COASTAL COMMUNITIES PROGRAM

Town of Ahoskie

Community Action Team - Meeting #5

AGENDA

Thursday, Feb. 15, 2024, 10:00 AM - 12:00 PM

Location: Ahoskie Council Chambers at Ahoskie Fire Dept., 301 S Martin Luther King Jr. Drive, Ahoskie, NC 27910

10:00 – 11:30 AM	**Consolidate and Prioritize Projects** • Project examples • Revised project list • STAPLEE scoring explanation • STAPLEE worksheet • Cost-benefit worksheet
11:30 – 11:45 AM	**Phase 2 Public Open House** • Thurs. March 14th, 4:30 – 5:45 pm, drop-in style before Council meeting • Activities • Advertising
11:45 – 12:00 PM	**Discussion / Adjournment** • Next CAT meeting: Thurs. April 11th, 10:00 am – 12:00 pm

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #5

MEETING SUMMARY

THURSDAY, FEBRUARY 15, 2024, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Gordon Marsh, RK&K
- Tris Ford, RK&K
- Doug Keller, RK&K
- Jennifer Bracy, Town of Ahoskie
- Hunter Smith, Town of Ahoskie
- Morgan Askew, Town of Ahoskie
- Mike Bradley, Town of Ahoskie

Meeting Purpose:

- Consolidate and prioritize projects
- Plan Phase 2 public open house

Notes:

- Consolidate and prioritize projects
    - Project categories were discussed including policy, planning, green/hybrid infrastructure solutions and hard/grey infrastructure solutions.
    - Examples of nature-based solutions (green infrastructure) were discussed with example photos on PowerPoint.
    - The STAPLEE scoring method was discussed.
    - The cost-benefit analysis was discussed.
    - The updated draft suite of potential solutions was reviewed.
        - Discussed Ahoskie Creek stream restoration project which was removed from the list. The full stream restoration is not feasible due to an existing main sewer line. A littoral shelf along the stream would be possible.
        - Under planning, “Work with local Council of Governments and/or contractor to match local projects with grant opportunity, apply for those grants and administer successful grants.” This is important, but should be an implementation step for projects, not a project in itself. The town does have

state representative support. They applied for the Hometown grant in September. Staff capacity is an issue. Matching funding is also a struggle.

- Under planning, "Develop a Stormwater Action Plan…" This is a need. The model could be helpful in different aspects. However, it is not the highest priority as the town wants to focus on tangible on the ground projects.
- Under planning, "Develop a stormwater personnel training guide…" This can be removed. Current training is sufficient.
- Under planning, "Scale the Fire Safety Prevention planning and education program." The program is already robust. This can be noted as a continuing action but can be removed as a project.
- Under planning, "Improve upon efforts to inform citizens of the location and availability of shelters and evacuation routes…" This is a continuing action in partnership with county emergency management. This can be noted as a continuing action but can be removed as a project.
- Under planning, "Establish backup generators…" This is a need with good community support and political support and staff capacity for maintenance. Noted it should be moved under hard/grey infrastructure category.
- Under planning, "At the local government staff level, work with the North Carolina Dept. of Transportation and the Regional Planning Organization to identify drainage problem areas…" This is already happening through the town's participation on Peanut Belt RPO. This can be noted as a continuing action but can be removed as a project.
- Under green and hybrid infrastructure solutions, "Inspect debris blockage problems and secure funds for the clearance of debris from river, streams and tributaries." This is a high need. Ahoskie Creek needs a snag and drag project throughout, especially near the railroad where it is currently dammed up.
- Under green and hybrid infrastructure solutions, "Engineer, design, and construct a low impact stormwater infrastructure facility at R.L. Vann Community Center. Partnering with this group is a high priority and this may be the RCCP project selected to move forward. Discussed that retention pond would not be the best solution. The project should have easy maintenance and improve the aesthetics of the area, rain gardens, bioretention cells, tree planting, etc. The project should also include public educational signage. This is a high traffic area so the project would have great visibility.
- Under green and hybrid infrastructure solutions, "Design and construct a stormwater wetland west of Ahoskie Creek Recreational Ball fields." This area is a need for nuisance flooding as the baseball field frequently gets soggy. Yes, there would be good community support and political support due to the baseball league. Maintenane of the stormwater wetland is possible. Staff are already out there maintaining the recreation complex.

- Under green and hybrid infrastructure solutions, "Implement green stormwater infrastructure throughout public housing developments." There are several public housing developments in town. Some already have retention ponds. Green stormwater projects could be possible. Most public housing developments have their own maintenance people. Maintenance could be an agreement with the HOA.
- Under green and hybrid infrastructure solutions, "Incorporate green stormwater infrastructure downtown commercial district." This project can be removed. There are other areas of town that would benefit more.
- Under green and hybrid infrastructure solutions, "Strategically design and construct green stormwater infrastructure on town owned property." Maybe not as much community support on this one but yes political support. Maintenance would be a positive for property owned by the town. The wastewater headworks floods badly but there is a retaining wall around it. A lot of town owned property was sold in the recent past. This project can be kept on this list in case, but the team could not think of an ideal location offhand.
- Under green and hybrid infrastructure solutions, "Plan, design and construct a Rails to Trials project…" This can be removed. The town already tried to do this, but the railroad would not give up the corridor because they thought it might be used again.
- Under hard/grey infrastructure solutions, "Strategically upgrade the stormwater system…" This is a need. Yes, there would be community support and political support. Maintenance is a positive, town staff already maintain the system.
- Under hard/grey infrastructure solutions, "Retrofit Town Hall for flood events." Should be, "Retrofit or relocate Town Hall for flood events." Yes, there would be community support and political support.

- The Phase 2 Public Open House was discussed.
  - The event will be held on Thurs. March 14th from 4:30 – 5:45 pm, drop-in style, at the Fire Dept. The event is being held prior to the Town Council meeting to encourage attendance.
  - We will be asking the public for input on the priority projects, and they will be able to vote for which projects they like. There will also be education on the program and the project types including green infrastructure/nature-based solutions.
  - Advertisement materials were discussed. A flyer will be sent to the town to be shared on the town's Facebook page and posted in person at Town Hall, the Council Chambers/Fire Dept., and the Ahoskie Public Library.
  - The event will be on the town website calendar.
  - There will be a notice scrolling on the electronic message board closer to the event.
  - A press release will be developed and sent to the Roanoke Chowan News Herald.
  - Jennifer Bracy said she will also print out flyers and mail to the local churches.

- The next Community Action Team meeting will occur on Thurs. April 11th at 10:00 am.

COMMUNITIES
PROGRAM

Town of Ahoskie

Community Action Team - Meeting #6

AGENDA

Thursday, April 11, 2024, 10:00 AM - 12:00 PM

Location: Ahoskie Council Chambers at Ahoskie Fire Dept., 301 S Martin Luther King Jr. Drive, Ahoskie, NC 27910

10:00 – 10:30 AM	**Phase 2 Public Open House Results**
10:30 – 11:45 AM	**Priority Project Portfolios** • Review draft project portfolios • Discuss additional project details for portfolios • Select project to move forward – RCCP Phase 3 (engineering/design) applications due May 31st
11:45 – 12:00 PM	**Discussion / Adjournment**

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #6

MEETING SUMMARY

THURSDAY, APRIL 11, 2024, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Tris Ford, RK&K
- Gordon Marsh, RK&K
- Doug Keller, RK&K
- Kasen Wally, DCM
- Sarah Spiegler, NC Sea Grant
- Jennifer Bracy, Town of Ahoskie
- Morgan Askew, Town of Ahoskie
- Hunter Smith, Town of Ahoskie
- Steven Lassiter, Town of Ahoskie
- Paul Moore Jr., Pastor of Rock Church

Meeting Purpose:

- Review Phase 2 public open house results
- Review draft project portfolios
- Discuss additional details for project portfolios
- Select project to move forward to RCCP Phase 3

Notes:

- Reviewed results from public open house. There was a good turnout. Holding the open house prior to the regular council meeting seemed to help. The most popular project from the open house was "Upgrade the Stormwater System".
- Reviewed draft priority project portfolios.
    - Upgrade the Stormwater System
        - Discussed combining this project with the Stormwater Action Plan project. Stormwater Action Plan being first step (planning/engineering/design) and Upgrade the Stormwater System being the implementation project.
        - Noted that mapping has not been done for the stormwater system.
        - Noted that this could potentially be a hybrid project rather than just hard/grey infrastructure if green/nature-based solutions are evaluated as well.

- Noted that the timeframe for project needs to be adjusted.
- Noted there are many issues with storm drains that are too small. Need to identify where pipes need upsizing.
- Additional storm drains are also needed. Need to identify ideal placement for new storm drains.
- The retention pond at the Police Dept. needs maintenance and the town needs guidance on how to properly maintain. They have been cutting the edge plants annually.
- Noted that there is a Garden Club that does landscaping projects around town. Public works provides maintenance such as mulching, pruning, etc.

- Stormwater Action Plan
  - Discussed combining this with the Upgrade Stormwater System project, as discussed above.
  - Noted that the two public works supervisors would use the online system, but field staff are unlikely to. They also need hard copy information that can be handed off to workers. The online system combined with hard copy plans and maps is preferable. Poster sized print outs and field maps for employees would be nice. But it is important to have both resources even if online is not as frequently used.
  - Need to check into subscription cost for online system. Just ArcGIS online needed?
  - Can grant pay for subscription? Can grant pay for I-Pads?
- Back-up Generators for Critical Facilities
  - List needs: sewer lift stations, drinking water wells, and Town Hall currently have no generators. Police Dept., Public Works building, and Fire Dept. have generators but they are aging and in need of rehab or replacement.
- Stream Cleanout
  - This is an important need as Ahoskie Creek is plugged up with debris which is causing flooding issues.
  - Considered as RCCP Phase 3 application but recommendation was to apply for NC Dept. of Agriculture Streamflow Rehabilitation Assistance Program (StRAP). This program is specifically for stream cleanouts and application is relatively simple.
- Green Stormwater Infrastructure at RL Vann Center
  - Add educational signage to project description.
  - Need to adjust cost and timeline.
  - Discussed maintenance of green stormwater infrastructure. Depends on feature. For bioretention cells maintenance is re-mulching once or twice a year. Pruning is optional depending on aesthetic preferences.

- Retrofit or Relocate Town Hall
  - Noted that the town just had to have mold remediated from basement at an $8,000 cost. This was due to past flooding events.
- Green Stormwater Infrastructure at Public Housing Developments
  - Add educational signage to project description.
  - Discussed that this is possibly not worth the investment since it was not popular with public votes.
  - Discussed that the public housing complex on Jernigan Swamp Rd. has flooding issues and would probably be interested in this project. The complex is near Ahoskie Creek.
- Stormwater Wetland at Ahoskie Creek Ballfields
  - Add educational signage to project description.
  - Noted that the town would prefer green stormwater projects with low maintenance, but they can work with other ideas as well.
  - This project would likely be a woody wetland which would require no maintenance. The other option is a constructed marsh, and maintenance would still be very minimal.
- Green Stormwater Infrastructure on Town-Owned Property
  - Noted that this could relate to the stormwater system upgrade project. Town property is the ideal location to evaluate for green stormwater infrastructure.
  - Charles H. Jenkins building on Memorial Dr. has been sold. Other properties on town-owned property map seem accurate.

- The project the team selected to move forward to RCCP Phase 3 (engineering/design) was the Stormwater Action Plan (which will be combined with the Upgrade the Stormwater System project as the implementation piece, as discussed above). Applications are due May 31st.
- The next Community Action Team meeting will occur on Thurs. May 30th at 10:00 am.

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Community Action Team - Meeting #7

MEETING SUMMARY

THURSDAY, MAY 30, 2024, 10:00 AM - 12:00 PM, AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPT.

Attendees:

- Jamie Heath, Mid-East Commission
- Lisa Williams, Mid-East Commission
- Tris Ford, RK&K
- Doug Keller, RK&K
- Gordon Marsh, RK&K
- Jennifer Bracy, Town of Ahoskie
- Morgan Askew, Town of Ahoskie
- Paul Moore, Resident and Pastor of Rock Church

Meeting Purpose:

- Review draft Ahoskie Resilience Strategy and vote on endorsement.

Notes:

- The draft Ahoskie Resilience Strategy was reviewed. A general overview of the document layout was given and the project profiles were the primary focus.
- Updates needed:
    - SVI maps in Appendix A need to be changed to landscape format/page size standardized.
    - Credit Hertford County for parcel data where mapping is discussed.
    - See if blurriness in EPA EJ profiles in appendix can be fixed.
    - Maps need to be changed from “Low Income Housing” to “Affordable Housing”. Floodplain overlay map, WUI overlay map, and characteristic fire intensity scale overlay map.
    - Stormwater Action Plan – Upgrade the Stormwater System project profile: There should be a line between scope and hazards rows.
    - Stream Cleanout project profile: Title is slightly cut off. Change project estimated cost. “Up to $25 per linear foot (currently StRap funds pay $10.80 per linear foot for coastal streams).”
    - Retrofit or Relocate Town Hall project profile: Note in the project profile that it is a historic building and they would like to keep Town Hall downtown. Therefore, retrofit is

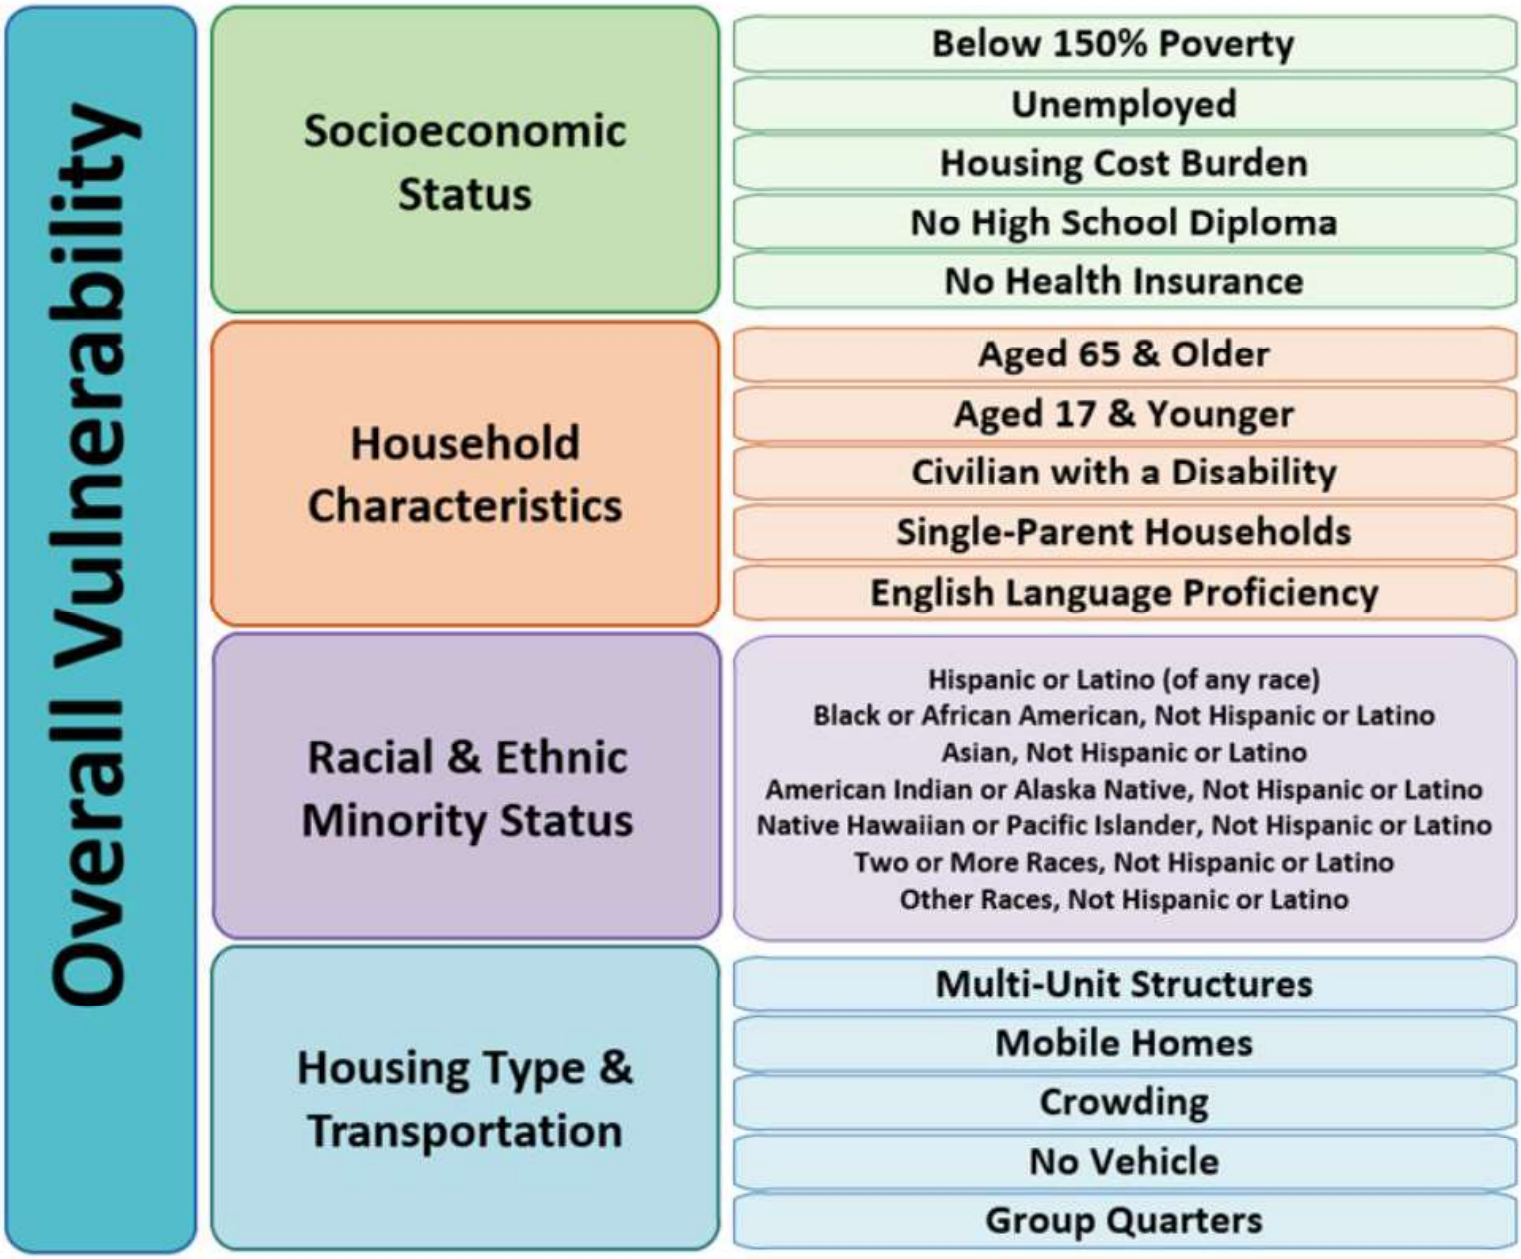
preferred over relocation. Note that Town Hall does sometimes need to be shut down due to flooding. Note that mold remediation had to occur in the basement and mold could occur again if another major storm floods the basement, which is a public health risk. Dollar sign missing in project cost.

- Green Stormwater Infrastructure at Public Housing Developments project profile: CEI in implementation scope, spell out Construction Engineering and Inspections, or remove since it is covered in bullet list (construction administration and construction inspections). Implementation cost, should say "(per project)".
- Stormwater Wetlands at Ballfields in Ahoskie Recreation Complex project profile: Title cut off. NC EQUIP acronym follows WRDG grant, remove text. NC EQUIP grant remove from grant list, not applicable since it is for private property owners of agricultural and forestry lands.
- Green Stormwater Infrastructure on Town Owned Properties project profile: Spell out CEI services in scope or remove. Project cost for engineering/design and implementation should say "(per project)".

- The Community Action Team voted to endorse the Ahoskie Resilience Strategy with the noted updates.
- This was the final Community Action Team meeting. Board adoption of the Ahoskie Resilience Strategy document is recommended. Jamie Heath is available to facilitate if needed and will deliver three final bound hard copies after board adoption is completed.

Variables Used

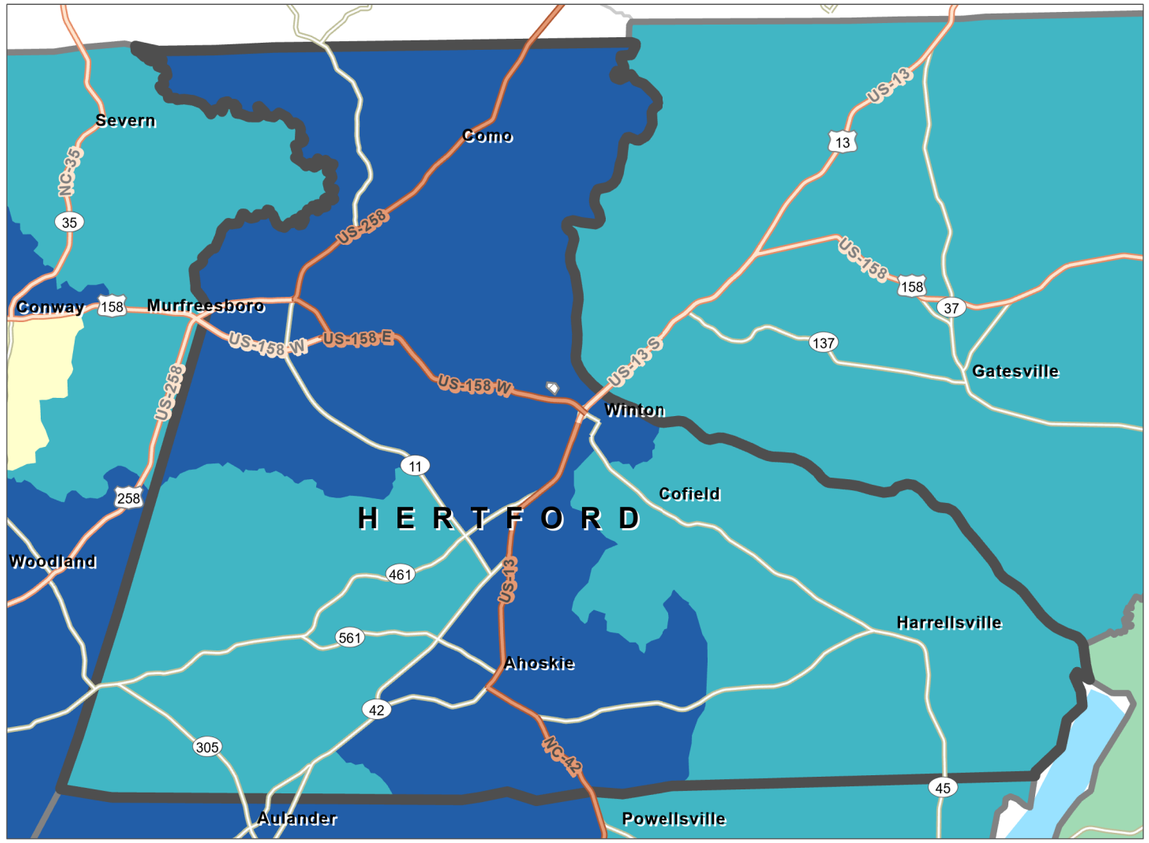
American Community Survey (ACS), 2016-2020 (5-year) data for the following estimates:



CDC/ATSDR Social Vulnerability Index 2020

HERTFORD COUNTY, NORTH CAROLINA

Overall Social Vulnerability[1]



Highest (Top 4th) — Vulnerability (SVI 2020)[2] — Lowest (Bottom 4th)

Data Unavailable[3]

0 1 2 4 6
Miles

Social vulnerability refers to a community's capacity to prepare for and respond to the stress of hazardous events ranging from natural disasters, such as tornadoes or disease outbreaks, to human-caused threats, such as toxic chemical spills. The **CDC/ATSDR Social Vulnerability Index (CDC/ATSDR SVI 2020)**[4] **County Map** depicts the social vulnerability of communities, at census tract level, within a specified county. CDC/ATSDR SVI 2020 groups **sixteen census-derived factors** into **four themes** that summarize the extent to which the area is socially vulnerable to disaster. The factors include economic data as well as data regarding education, family characteristics, housing, language ability, ethnicity, and vehicle access. Overall Social Vulnerability combines all the variables to provide a comprehensive assessment.

ATSDR Agency for Toxic Substances and Disease Registry

GRASP Geospatial Research, Analysis, and Services Program

CDC/ATSDR SVI Themes

Socioeconomic Status[5]

Census Tract 37091950401, Hertford County, North Carolina

2020 National Socioeconomic Status Score:

0.7263

Possible scores range from 0 (lowest vulnerability) to 1 (highest vulnerability).

A score of **0.7263** indicates a **medium to high** level of vulnerability.

EJScreen Report (Version 2.11)

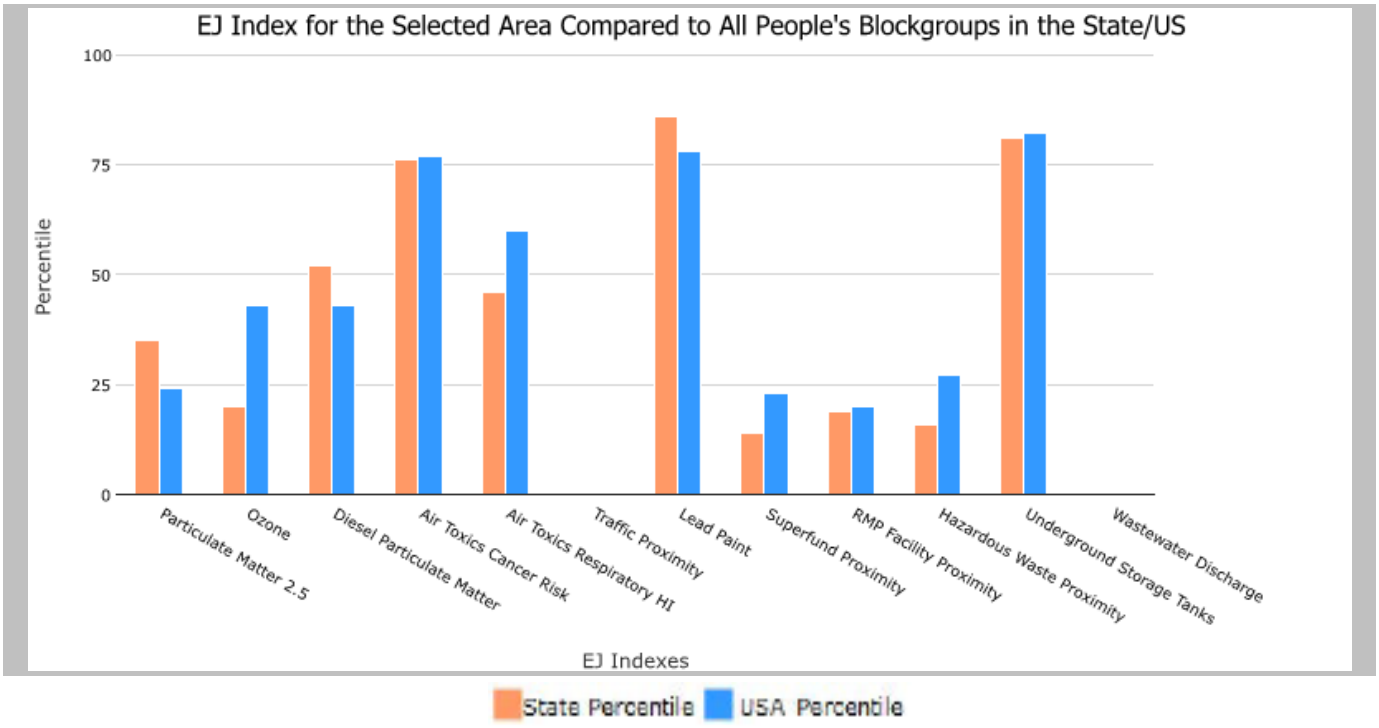
Blockgroup: 370919504011, NORTH CAROLINA, EPA Region 4

Approximate Population: 864

Input Area (sq. miles): 2.74

Selected Variables	State Percentile	USA Percentile
Environmental Justice Indexes		
Particulate Matter 2.5 EJ index	35	24
Ozone EJ index	20	43
Diesel Particulate Matter EJ index*	52	43
Air Toxics Cancer Risk EJ index*	76	77
Air Toxics Respiratory HI EJ index*	46	60
Traffic Proximity EJ index	N/A	N/A
Lead Paint EJ index	86	78
Superfund Proximity EJ index	14	23
RMP Facility Proximity EJ index	19	20
Hazardous Waste Proximity EJ index	16	27
Underground Storage Tanks EJ index	81	82
Wastewater Discharge EJ index	N/A	N/A

EJ Indexes - The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.



*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: https://www.epa.gov/haps/air-toxics-data-update.

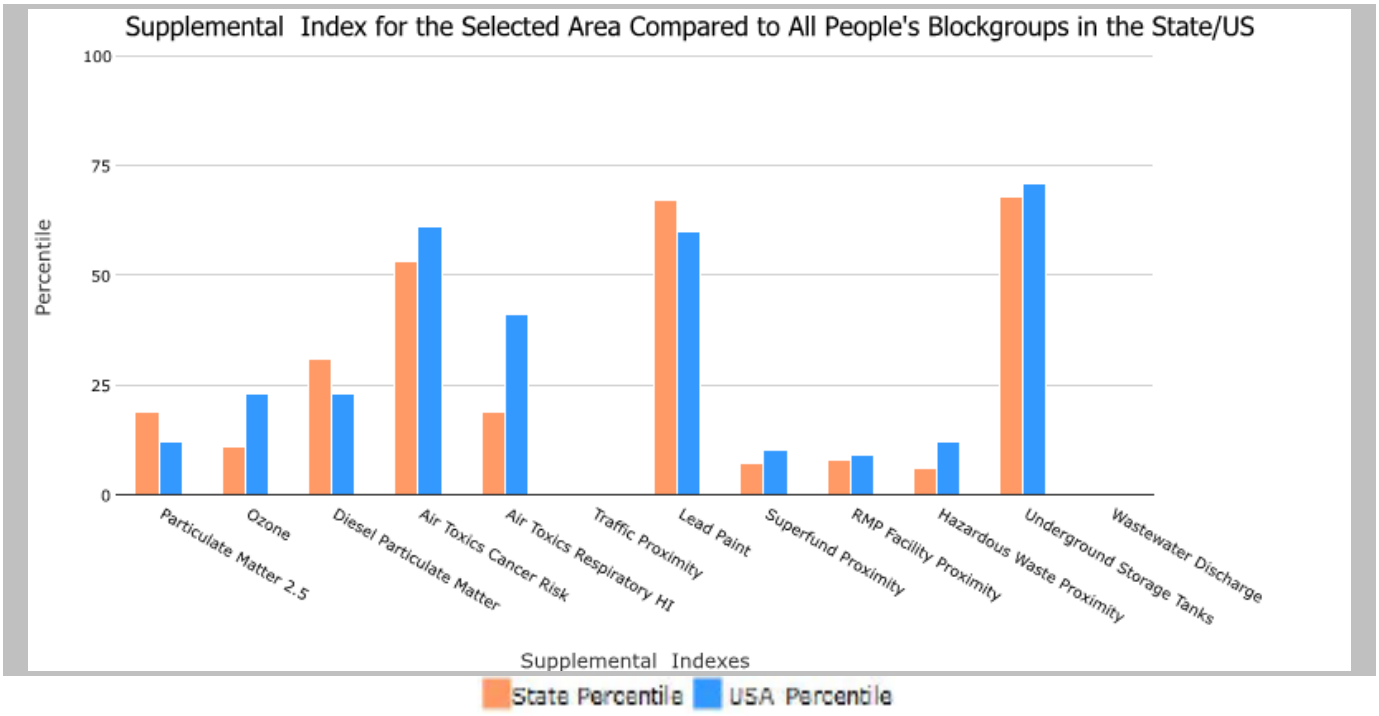
RMP Facility Proximity Supplemental Index	8	9
Hazardous Waste Proximity Supplemental Index	6	12
Underground Storage Tanks Supplemental Index	68	71
Wastewater Discharge Supplemental Index	N/A	N/A

Supplemental Indexes - The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on low-income, limited English speaking, less than high school education, unemployed, and low life expectancy populations with a single environmental indicator.



This report shows the values for environmental and demographic indicators, EJScreen indexes, and supplemental indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. For additional information, see: www.epa.gov/environmentaljustice.

EJScreen Report (Version 2.11)

Blockgroup: 370919504022, NORTH CAROLINA, EPA Region 4

Approximate Population: 592

Input Area (sq. miles): 1.83

Selected Variables	State Percentile	USA Percentile
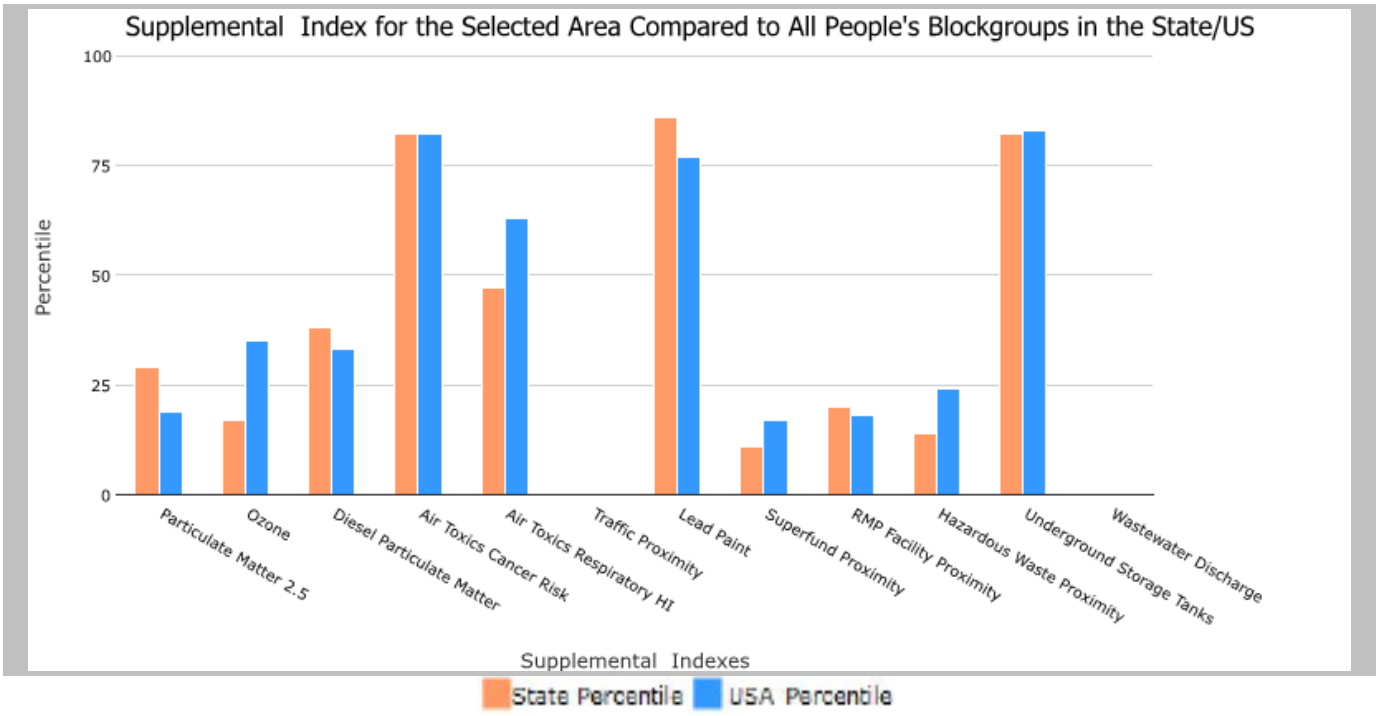
Supplemental Indexes		
Particulate Matter 2.5 Supplemental Index	29	19
Ozone Supplemental Index	17	35
Diesel Particulate Matter Supplemental Index*	38	33
Air Toxics Cancer Risk Supplemental Index*	82	82
Air Toxics Respiratory HI Supplemental Index*	47	63
Traffic Proximity Supplemental Index	N/A	N/A
Lead Paint Supplemental Index	86	77
Superfund Proximity Supplemental Index	11	17
RMP Facility Proximity Supplemental Index	20	18
Hazardous Waste Proximity Supplemental Index	14	24
Underground Storage Tanks Supplemental Index	82	83
Wastewater Discharge Supplemental Index	N/A	N/A

Supplemental Indexes - The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on low-income, limited English speaking, less than high school education, unemployed, and low life expectancy populations with a single environmental indicator.



This report shows the values for environmental and demographic indicators, EJScreen indexes, and supplemental indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. For additional information, see: www.epa.gov/environmentaljustice.

EJScreen Report (Version 2.11)

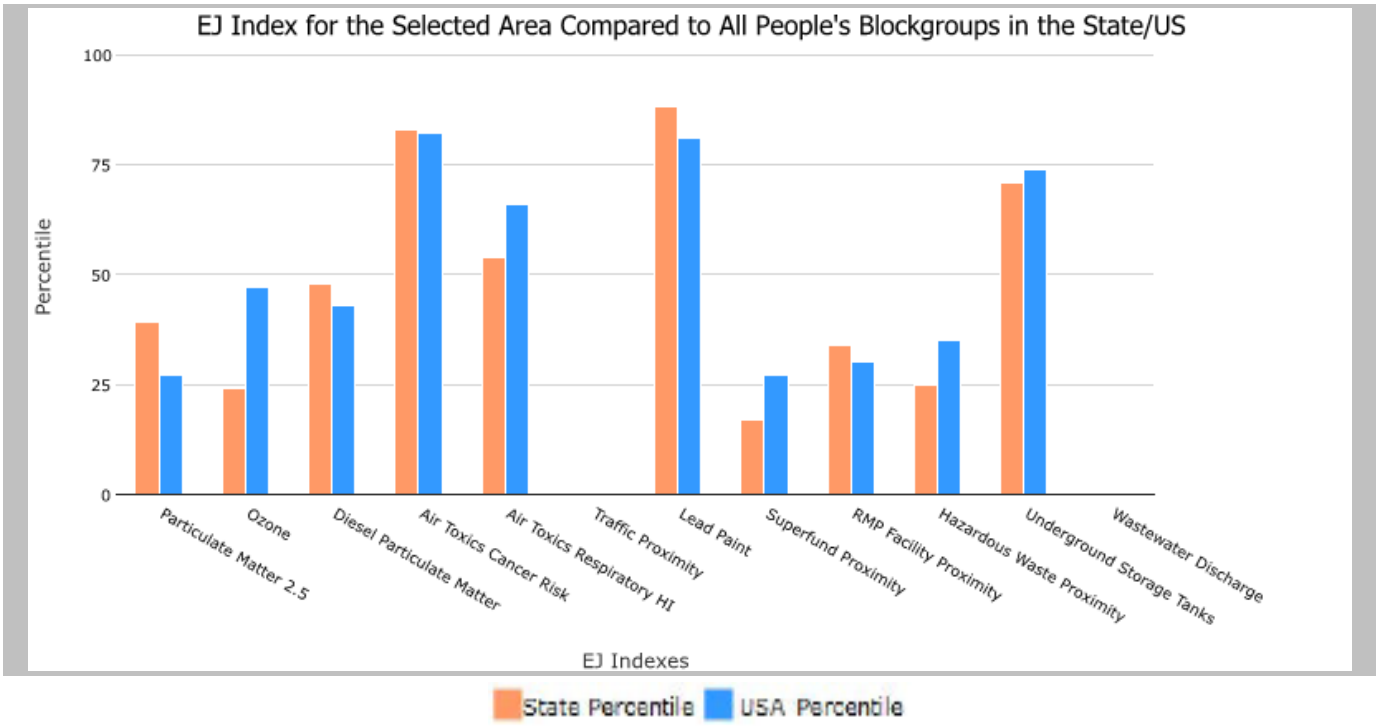
Blockgroup: 370919504024, NORTH CAROLINA, EPA Region 4

Approximate Population: 1,981

Input Area (sq. miles): 19.21

Selected Variables	State Percentile	USA Percentile
Environmental Justice Indexes		
Particulate Matter 2.5 EJ index	39	27
Ozone EJ index	24	47
Diesel Particulate Matter EJ index*	48	43
Air Toxics Cancer Risk EJ index*	83	82
Air Toxics Respiratory HI EJ index*	54	66
Traffic Proximity EJ index	N/A	N/A
Lead Paint EJ index	88	81
Superfund Proximity EJ index	17	27
RMP Facility Proximity EJ index	34	30
Hazardous Waste Proximity EJ index	25	35
Underground Storage Tanks EJ index	71	74
Wastewater Discharge EJ index	N/A	N/A

EJ Indexes - The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.



*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: https://www.epa.gov/haps/air-toxics-data-update.

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

Town of Ahoskie

Town Level Social Vulnerability Data – US Census Bureau

TOWN OF AHOSKIE CENSUS DATA

Total Population: 4,891

Disability: 20.1% of population with a disability

Elderly: 18.7% of population 65 years and over

Language Barrier: 6.2% of population speak a language other than English at home

Median Household Income: $36,271

Minority: 76.3% minority population (2020 US Decennial Census)

Poverty Rate: 25.1% of population below poverty rate

Vehicle Access: 16.4% of households have no vehicle available

(All data except total population and minority population is 2021 American Community Survey 5-year estimates from the US Census Bureau.)

STAPLEE Criteria >>	Social		Technical			Administrative			Political			Legal			Economic				Environmental					TOTAL
Considerations for Alternative Actions	Community Acceptance	Effect on Segment of Population	Technical Feasibility	Long term Solution	Secondary Impacts	Staffing	Funding Allocated	Maintenance/Operations	Political Support	Local Champion	Public Support	State Authority	Existing Local Authority	Potential Legal Challenge	Benefit of Action	Cost of Action	Contributes to Economic Goals	Outside Funding Required	Effect on Land/Water	Effect on Endangered Species	Effect on HAZMAT Waste Sites	Consistent w/ Community Environmental Goals	Consistent w/ Federal Laws	
POLICY																								
1. Responsible Development Policy **Comments:** Implement regulations for responsible and sustainable coastal development, considering factors such as setback requirements, building materials (fire and flood resistant), and energy efficiency.		1	0	1	1							1		0	1	1	1	1	1	0	0	1	1	11
2. Low-Impact Development Policy on Government facilities **Comments:** Policy geared toward enforcing stormwater retention and infiltration through design		1	1	1	1							1		0	1	0	1	1	1	0	0	0	1	10
3. Explore Stormwater fee **Comments:** Policy to implement a stormwater fee to generate income for stormwater projects		0	0	1	1							1		0	1	0	1	0	1	0	0	0	1	7
4. Renewable energy policy **Comments:** Policy that addresses renewable energy development		1	0	1	1							1		0	1	1	0	1	1	0	0	0	1	9
5. Improve building codes **Comments:** higher electrical outlet, elevation requirements, material requirements		0	1	1	1							1		0	1	0	1	1	0	0	0	0	1	8
6. Improve land use policies (including zoning code, subdivision code, floodplain development code) **Comments:** Stricter codes within flood and wildfire prone areas		0	0	1	1							1		0	1	0	1	1	1	0	0	1	1	9
PLANNING																								
7. Complete a grant analysis to assess future grant opportunities **Comments:**		1	1	1	1							1		1	1	1	1	0	1	1	1	1	1	14
8. Complete a hydro analysis for the town to assess flood prone areas **Comments:** Assess drainage issues within the town. Could be combined with Stormwater assessment.		1	0	1	1							1		1	1	0	0	1	1	0	0	1	1	10
9. Develop a land management and stewardship plan **Comments:** List, define, and evaluate current property for potential environmental value		1	0	1	1							1		0	1	0	1	1	1	0	1	1	1	11
10. Stormwater Maintenance Plan **Comments:** Includes ditches and tributaries		1	1	1	1							1		1	1	0	1	1	1	0	0	0	1	11

36. XXXXXXX **Comments:**																								0
Albemarle Regional Hazard Mitigation Plan																								
HER1. Improve upon efforts to inform citizens of the location and availability of shelters and evacuation routes in the event of a natural disaster. These efforts will utilize local print and television media outlets, social networking, as well as Town and County websites. The County will also evaluate all shelter facilities to ensure that they all meet American Red Cross (ARC) standards.		1	0	0	1							1		1	1	1	0	1	0	0	0	1	1	9
HER2. Maintain continuous contact/working relationship with electric service providers in the County to address the following: (1) disaster preparedness techniques (e.g. tree trimming, vegetation planting requirements, pole replacement); (2) Identify critical electrical facilities needing retrofit or upgrade and map with elevation reference marks; \and (3) communication with County officials during and immediately after a natural hazard event that results in loss of electrical power.		1	1	0	1							1		1	1	1	0	1	0	0	0	1	1	10
HER3. Maintain, and where necessary, establish backup generators at all identified critical facilities. Additionally, County Emergency Services will evaluate the equipment on a regular basis to assure it continues to meet operational demands at county facilities.		1	1	0	1							1		1	1	1	0	1	0	0	0	0	1	9

HER4. Retrofit all County and Municipal facilities for lightning protection.		1	1	0	1							1		1	1	1	0	1	0	0	0	0	1	9
HER5. Support through local ordinances conservation easements on all flood-prone property and impose such easements on all properties acquired with public assistance funds.		1	0	1	1							1		0	1	1	1	1	1	0	0	0	1	10
HER6. Provide annual review of development restrictions in floodplain areas and maintain initiatives to ensure limited residential and commercial development in the floodplain and optimal protection of critical facilities.		1	1	1	1							1		1	1	1	0	1	1	0	0	1	1	12
HER7. The HMPC will review "Firewise" zoning and subdivision standards and recommend their appropriateness for incorporation into existing or new zoning or subdivision ordinances. (Source http://www.firewise.org)		1	1	0	1							1		1	1	1	0	1	1	0	0	1	1	11
HER8. Review county and municipal zoning, subdivision, and flood damage prevention ordinances for improved control of flooding hazards and improvement of drainage.		1	1	0	1							1		1	1	1	0	1	1	0	0	1	1	11
HER9. Adopt and annually update a capital improvements plan with an emphasis on mitigation for critical facilities.		1	1	0	1							1		1	1	1	1	0	1	0	0	1	1	11
HER10. At the local government staff level, work with the North Carolina Dept. of Transportation (NCDOT) and the Regional Planning Organization to identify drainage problem areas; develop resolutions for drainage issues created by NCDOT facilities, including inspections of channels, retention basins; and, as needed, pursue debris removal.		1	0	1	1							1		1	1	1	0	1	1	0	0	1	1	11
HER11. Apply for all available funding from the Hazard Mitigation Grant Program (HMGP) and other funds to assist with the mitigation of severe repetitive loss properties by relocating structures out of the floodplain.		1	1	1	1							1		1	1	1	1	0	1	0	0	1	1	12
HER12. Inspect debris blockage problems and secure funds for the clearance of debris from rivers, streams and tributaries.		1	0	1	1							1		1	1	1	0	1	1	0	0	1	1	11

HER13. Mail once annually a notice to all property owners whose land is located within a special flood hazard area. This notice should clearly state that the recipients' property is susceptible to flooding. The County will also maintain a flood map information service, whereby County residents can call or come by to receive information regarding their property in relation to the defined floodplain.		1	1	0	1							1		1	1	1	0	1	0	0	0	1	1	10
HER14. Make information regarding hazards and development regulations within the floodplain available through the following: (1) The County Planning Director will ensure that the local library maintains information relating to flooding and flood protection. (Maintain dates of distribution and librarian certification of availability); (2) The County will provide a link on their website to FEMA resources addressing flooding and flood protection. This information will be made available to citizens, realtors, developers, and contractors.		1	1	0	1							1		1	1	1	0	1	0	0	0	1	1	10
HER15. Coordinate with the Hertford County School System to establish a Hazards Awareness Educational Program for use by educators within the Hertford County School System.		1	1	0	1							1		1	1	1	0	0	0	0	0	1	1	9
HER16. Maintain a registry of special needs individuals which has been coordinated with the Hertford County Department of Social Services. This list will include: (1) Persons on life support systems; (2) Persons dependent on electricity for medical equipment; and (3) Persons with severe mental handicap or mental illness.		1	1	0	1							1		1	1	1	0	1	0	0	0	0	1	9
HER17. Maintain a list of all hazardous material sites or transport corridors in Hertford County. This effort will be carried out through the efforts of the County LEPC.		1	1	0	1							1		1	1	1	0	1	0	0	0	0	1	9
HER18. Actively work with Federal, State, local and private partners to identify mitigation measures and secure funding via grants to alleviate flooding. These efforts should focus on the following areas: • US 13 at Ahoskie Creek • Harrisville Island • Ahoskie Creek and DT Road • Murfreesboro Drainage and Culverts • Ebo Road Drainage and Culverts • Como Drainage and Culverts		1	1	1	1							1		1	1	1	1	1	1	0	0	1	1	13
HER19. Annually review and update the County's Emergency Operations Plan (EOP) to ensure compliance with all NCEM and NCOEMS procedures and policies. Through these updates, the County will work closely with participating municipal jurisdictions to ensure that all jurisdictions continue to be educated and prepared for activation of the EOP in the event of a disaster event.		1	1	1	1							1		1	1	1	1	1	0	0	0	1	1	12

HER20. Hertford County, and all participating jurisdictions, will work to implement all recommendations defined within the Hurricane Matthew Resiliency Redevelopment Plan .		1	0	1	1							1		1	1	0	1	1	1	0	0	1	1	11
HER21. Increase awareness regarding the impacts of natural disasters by educating and informing residents, businesses and visitors via public education, social media and print materials. These efforts should focus on ways to mitigate disaster impacts to both person and property.		1	1	0	1							1		1	1	1	0	1	0	0	0	1	1	10

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Benefit/Cost Ratings

Benefit-Cost Overview

The cost or the economic case for different strategies or actions must be considered when developing resilience strategies. An informal cost-benefit analysis should be used to review proposed adaptation actions. Ratings of high, medium, or low are assigned to the anticipated costs and the benefits associated with each action based on general criteria that are established by the community.

Make sure to explore and identify potential funding mechanisms for project or action item implementation.

Benefit/cost ratings	
	Benefit
HIGH	Action would have significant impact on risk reduction
MEDIUM	Action would have an impact on risk reduction
LOW	Long-term benefits are difficult to quantify in the short term
	Cost
HIGH	Cost of project is high and/or funding will be more difficult to acquire
MEDIUM	Cost of project is medium and/or funding will be easier to acquire
LOW	Cost of project is low and/or funding is available in existing budget

Strategy	Benefit	Cost
1. Develop a Stormwater Action Plan. This plan will complete a stormwater ground assessment and surface hydrology analysis that will be incorporated into an online mapping system that can submit real-time data to analyze, prioritize, and take action on potential problem areas. The plan will also incorporate a maintenance plan that will be tracked by the online tool. Comments: Assess drainage issues within the town. Could be combined with Stormwater assessment. Model may be helpful but online tool may or may not be needed. Operation background may be a barrier	**HIGH**	**MEDIUM**
2. Inspect debris blockage problems and secure funds for the clearance of debris from rivers, streams and tributaries. This would include Ahoskie Creek and its tributaries with a primary focus on Ahoskie Creek to increase drainage flow within the watershed.	**HIGH**	**MEDIUM**
3. Engineer, design, and construct a low impact stormwater infrastructure facility at R.L. Vann School. Add Education. Comments: Located in Ward B. This could include stormwater wetlands, rain gardens, bioretention, tree planning, and education.	**HIGH**	**MEDIUM**
4. Design and construct a Stormwater wetland west of Ahoskie Creek Recreational Ball Fields. Comments: Located in Ward A	**MEDIUM**	**MEDIUM**
5. Implement green stormwater infrastructure throughout public housing developments. Comments: Permeable parking, stormwater infiltration medians, ext.	**HIGH**	**HIGH**
6. Strategically design and construct green stormwater infrastructure on Town owned property. Comments: There are a number of parcels where impermeable surfaces could be removed, bioretention cells could be installed, trees could be planted, permeable parking, ext.	**HIGH**	**HIGH**
7. Establish back up generators at all identified critical facilities and replace aging generators that are no longer operating efficiently. Maintain and evaluate the equipment on a regular basis to ensure it continues to mete operational demands at town facilities.	**HIGH**	**MEDIUM**

Benefit/Cost Ratings

Strategy	Benefit	Cost
8. Strategically upgrade stormwater system through pipe replacements (upsizing where needed), increasing size and/or quantity of culverts and catch basins, redefining ditches, ext. Comments: The Stormwater Action Plan can be utilized to determine prioritization. If chosen, project will be defined for future grant opportunities.	**HIGH**	**HIGH**
9. Retrofit or relocate Townhall for flood events.	**HIGH**	**MEDIUM**

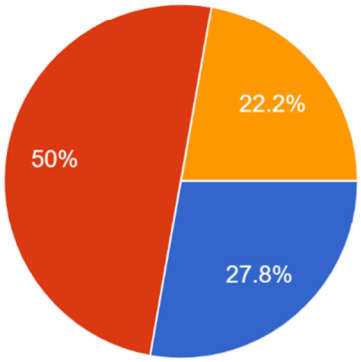
PROGRAM

AHOSKIE

Phase 1 Public Survey Summary

Which of the following statements about coastal storms do you most agree with?

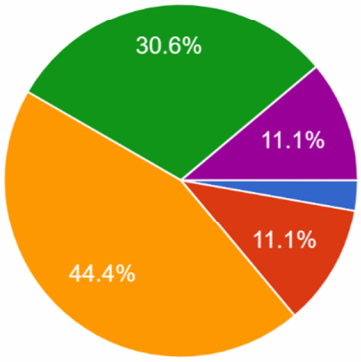
36 responses



- I am very worried about coastal storms in the future.
- I am slightly worried about coastal storms in the future.
- I am not worried about coastal storms in the future.

On a scale of 1-5, how significant of a risk do you think flooding currently poses to your community?

36 responses



- 1 - not a concern
- 2 - minor challenge
- 3 - moderate challenge
- 4 - serious challenge
- 5 - extreme challenge

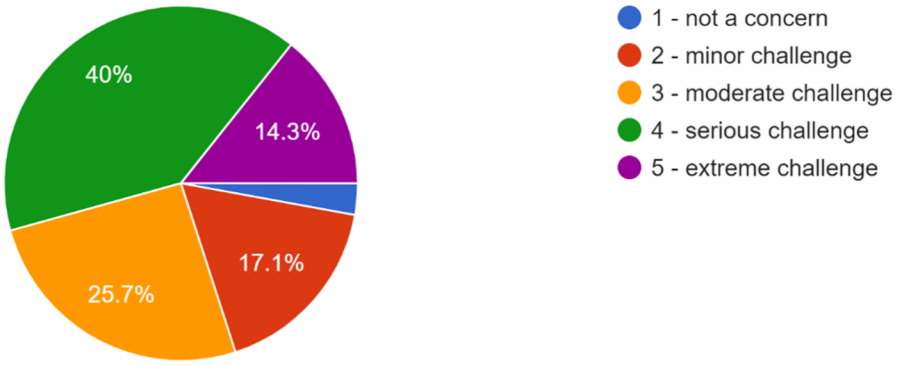
AHOSKIE

Phase 1 Public Survey Summary

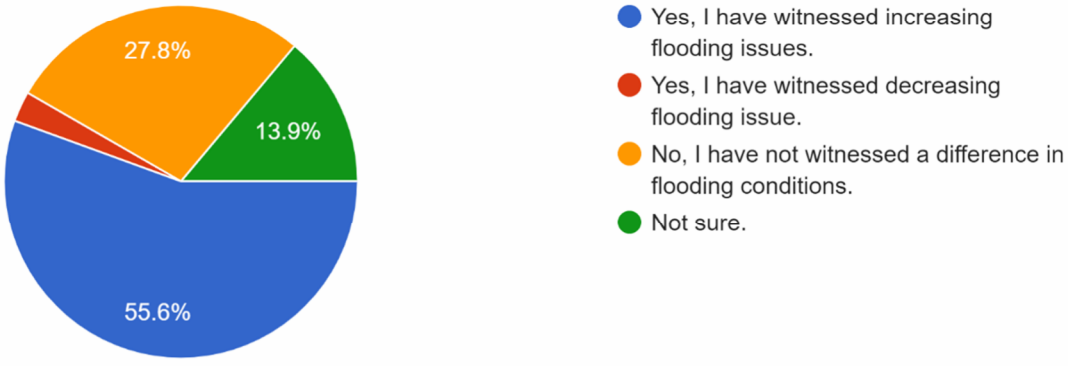
On a scale of 1-5, how significant of a risk do you think flooding will pose to your community in the next 20-40 years, given climate change and rising sea levels?

35 responses



Throughout your time living and/or working in Ahoskie, has your experience with flooding changed?

36 responses

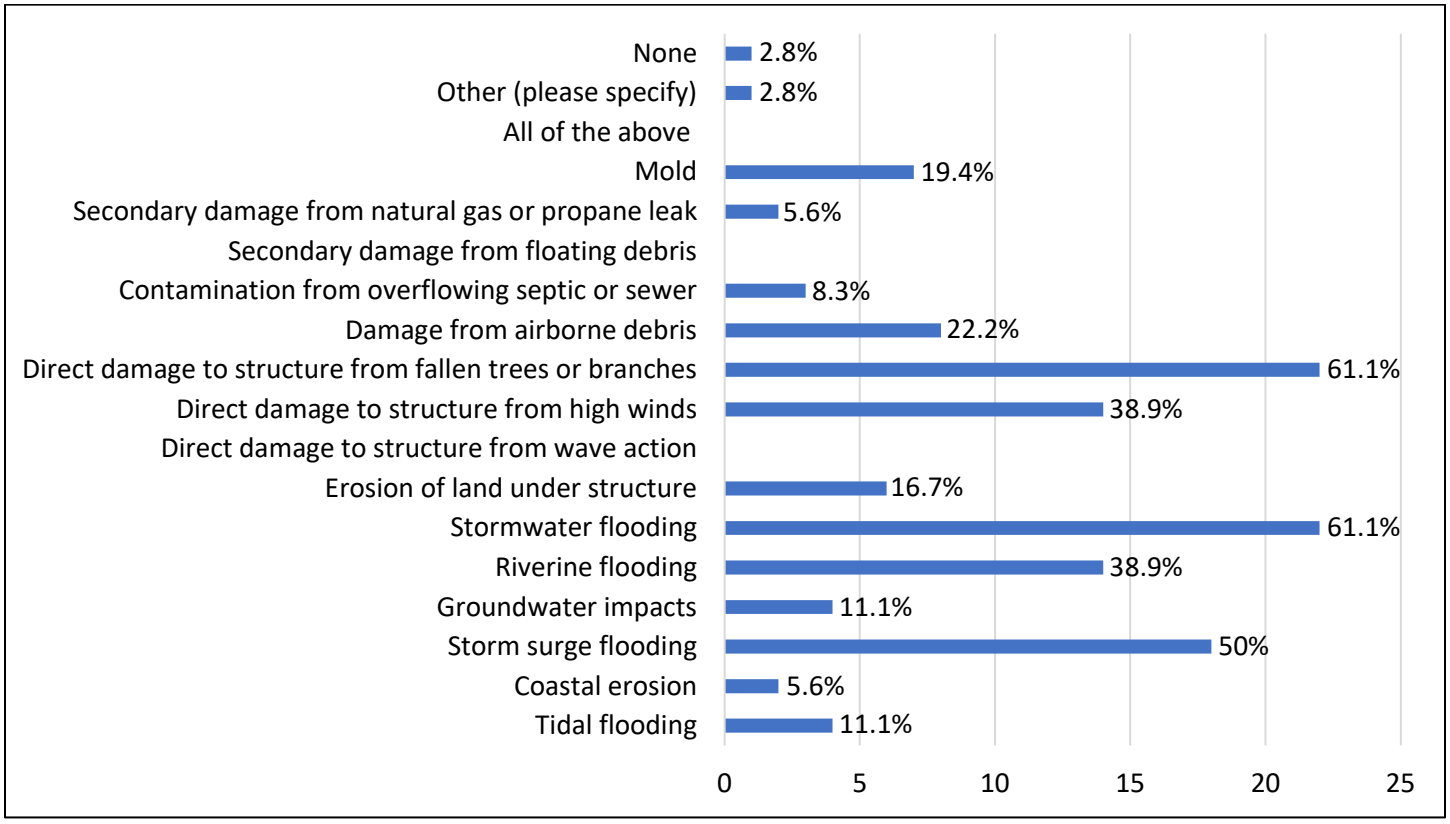


Comments on previous question (optional). 3 responses

- Climate change is a natural occurrence, has been for millions of years according to science. Claiming there is some urgent need to find a problem for a solution is not a good use of government time or my money.
- Question 9 comments: Not a concern in my immediate neighborhood - but other areas of Ahoskie are more prone such as Ahoskie Creek and Stony Creek areas. Question 10 comments: No idea but probably same as above?? Who's to say? Question 11 comments: No changes in my immediate area.
- Chowan River erosion, Ahoskie Creek erosion (Question 7)

Coastal Hazards and Impacts

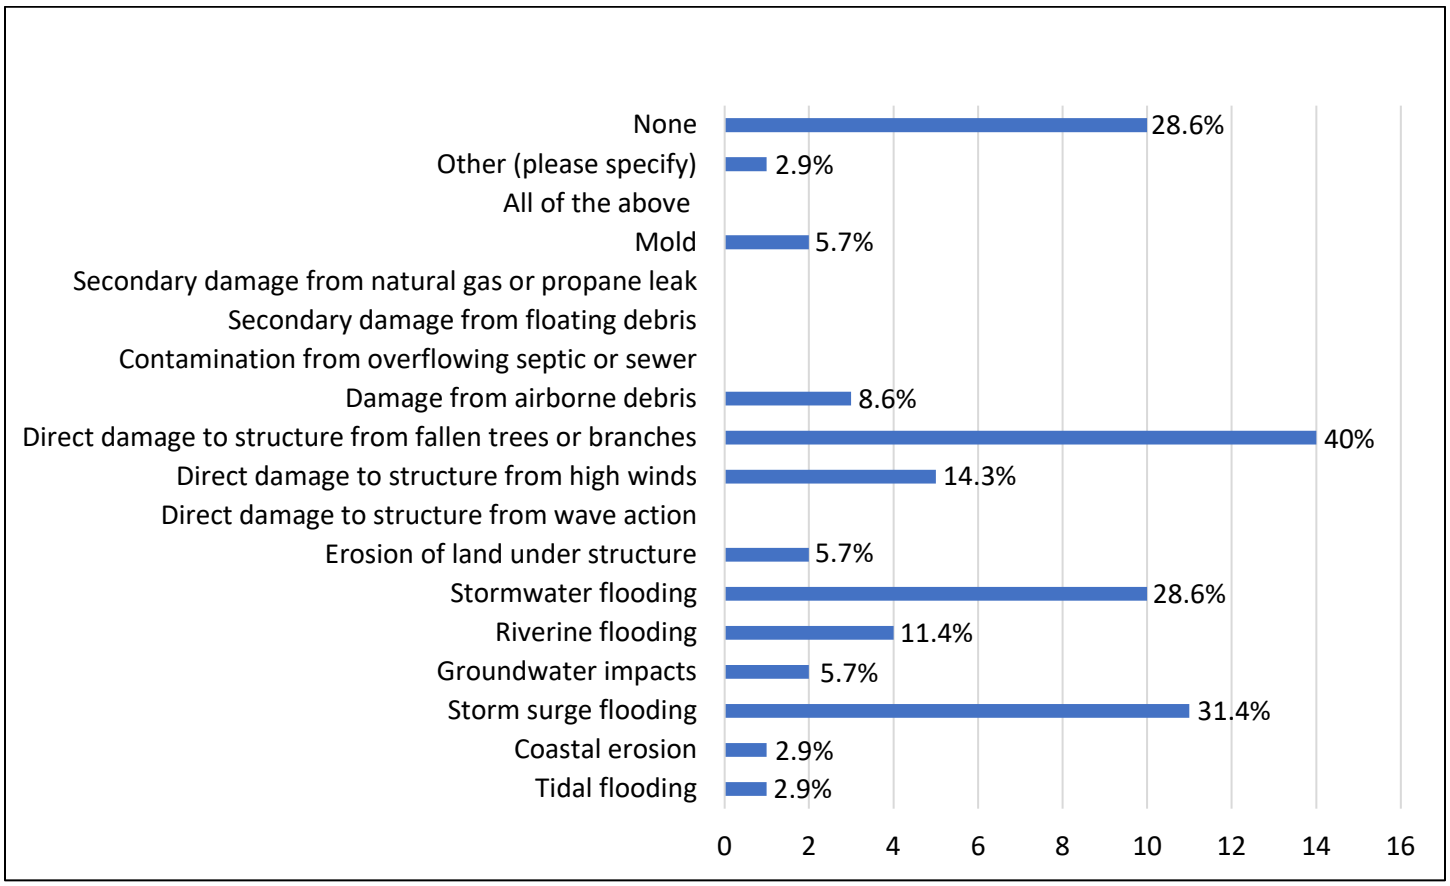
What type of coastal hazards have you witnessed in your community? Select all that apply. 36 responses



Comments on previous question (optional).2 responses

- can't tell if you are trying to back into implying that the above are due to "climate change" If that is the case please try and do better and perhaps get educated.
- Riverine flooding: Ahoskie and Stony Creeks. Stormwater flooding: esp. Church Street. Damage from high winds, fallen trees or branches, airborne debris: Isabel in 2003 and other heavy storms.

Which of those same hazards have directly impacted your home or your business? Select all that apply.35 responses



Comments on previous question (optional).1 response

- can't tell if you are trying to back into implying that the above are due to "climate change" If that is the case please try and do better and perhaps get educated.

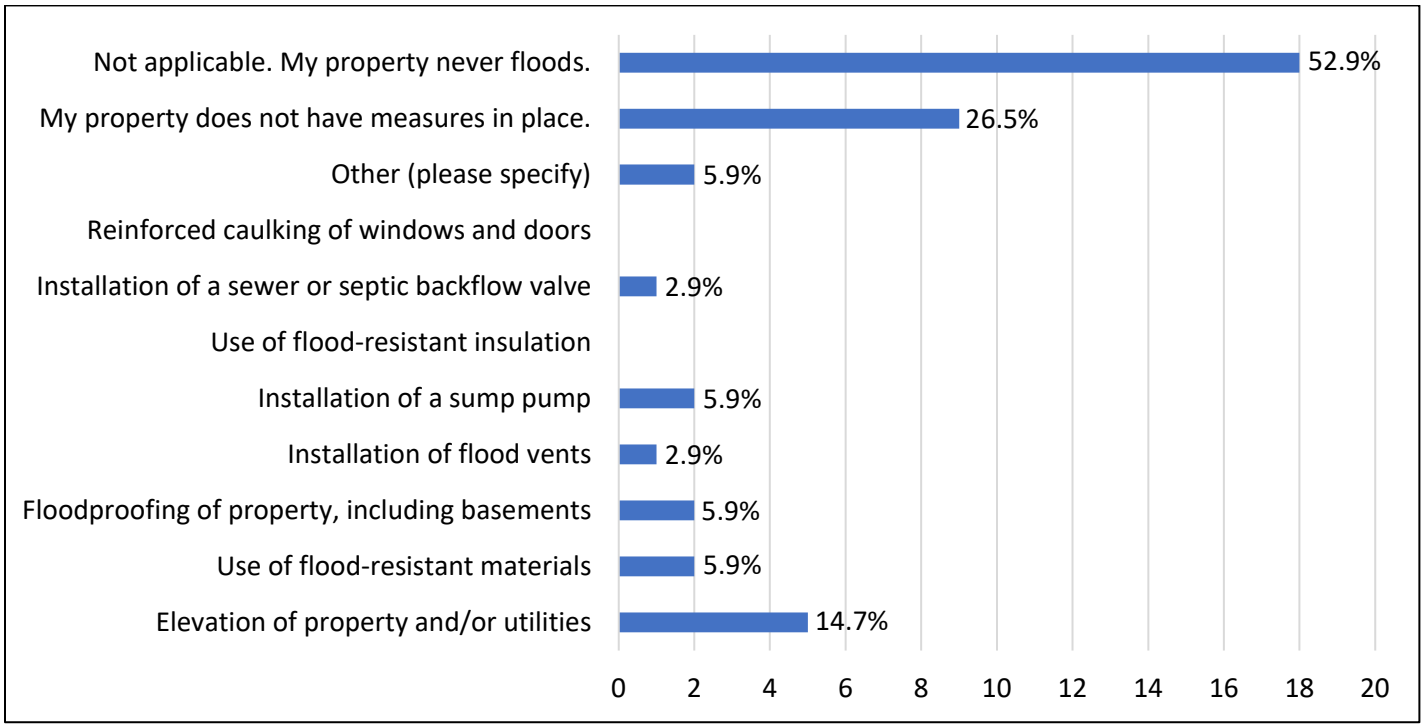
Phase 1 Public Survey Summary

Do you have measures in place to prevent and/or reduce flooding or flood-related damages and losses to your property? If yes, what type of actions have you taken? Check all that apply.34 responses



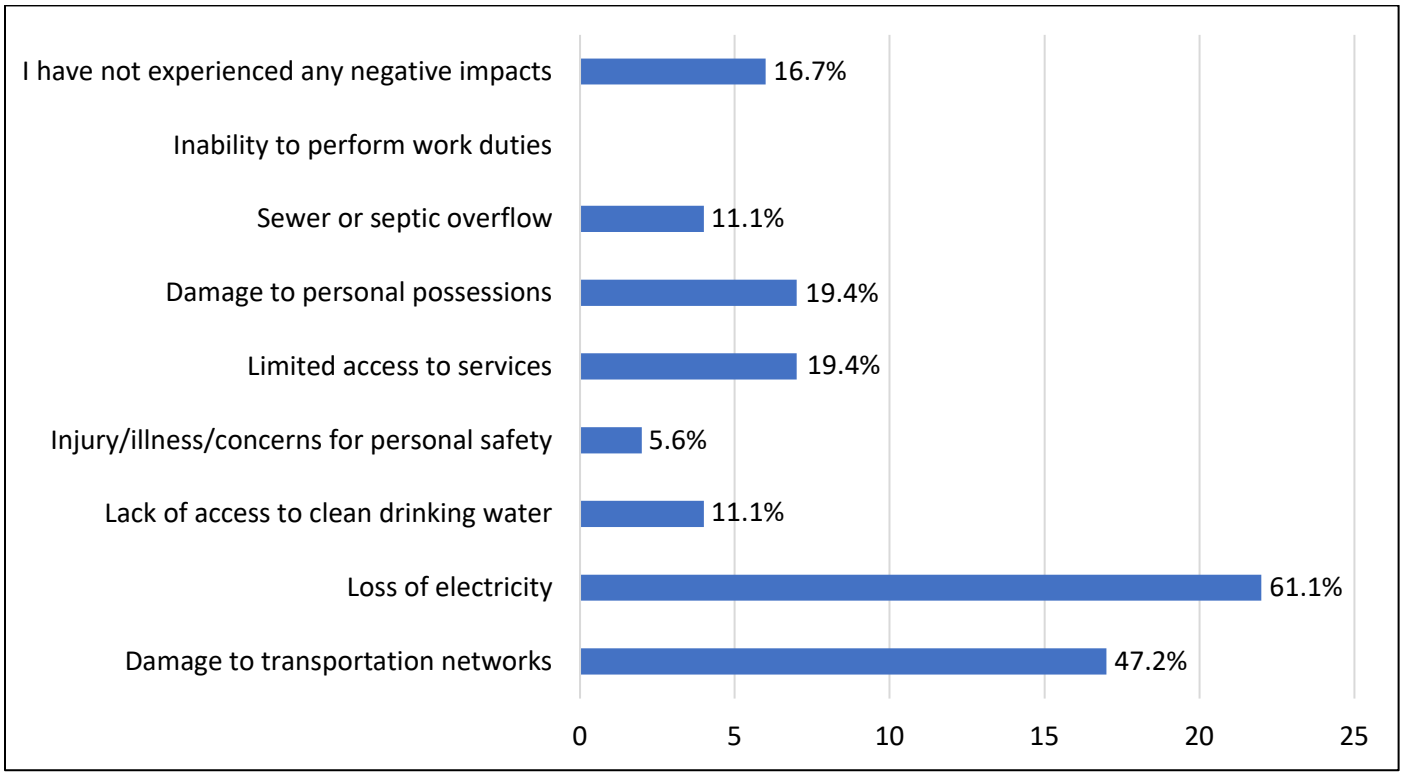
Have you ever considered moving to another location (can be inside or outside of Ahoskie) to avoid future flood losses, impacts, or damages?

36 responses

AHOSKIE

Phase 1 Public Survey Summary

Aside from any impacts to your home or business, have you experienced any other negative impacts as a result of flooding events? Check all that apply. 36 responses



Comments on previous question (optional) 1 response

Clean ditches & culvert pipes prior to storms (Question 14)

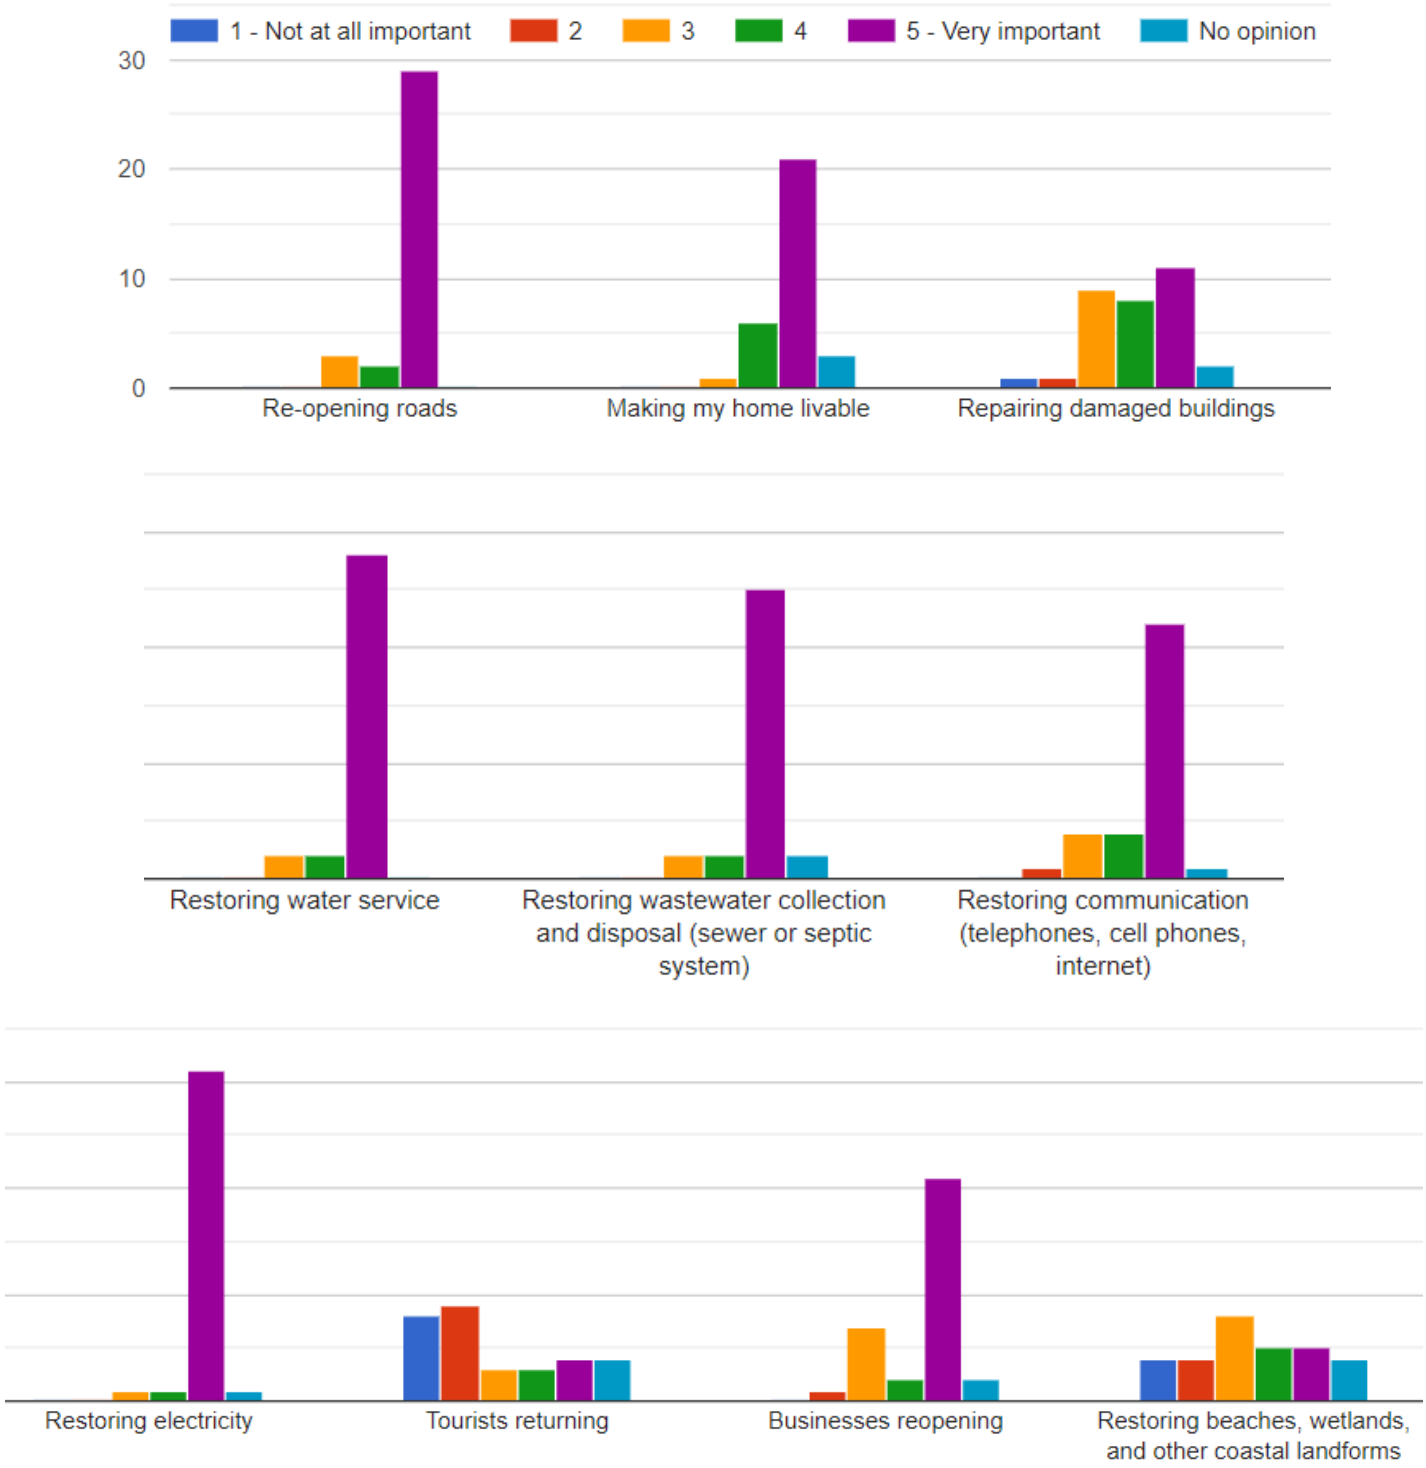
Are there any specific areas of your community vulnerable to coastal hazards? If so, please list them by location. Please use street intersections or landmarks to describe locations. 10 responses

- No
- The wooded area behind the homes on the 500block of Baker Street West from Hgwy13 to West Street floods almost anytime it rains with amy intensity
- Hayes Street, First Street
- Ahoskie Creek / Amphitheatre area. Stony Creek Area. Church Street (esp. P.O. & S. Bank areas). That's all I can think of for now.
- no
- Live in secluded area no flooding problems
- North end of Forest Drive Road floods - low lots - covered roads - solution is install larger culvert driveway pipes for better flow and improving water exiting the neighborhood.
- Most of King St Windsor to the hospital floods
- None

AHOSKIE

Phase 1 Public Survey Summary

Please rank the following activities, intended to restore daily life after a coastal storm.



Is there anything else you would like to share with us regarding flooding and coastal resilience in Ahoskie?12 responses

No (10 responses)
We do our best get it back!
Clearing of the drains for water run off

Stakeholder Engagement

How would you like the Town of Ahoskie to communicate with you and/or your community regarding this program or on similar programs in the future?

AHOSKIE

Phase 1 Open House Summary

PHASE 1 OPEN HOUSE

WEDNESDAY, DECEMBER 13, 2023, 4:00 PM - 6:30 PM; AHOSKIE COUNCIL CHAMBERS AT AHOSKIE FIRE DEPARTMENT

Attendees:

- Tris Ford, RK&K
- Sarah Spiegler, NC Sea Grant
- Kasen Wally, NC Division of Coastal Management
- Morgan Askew, CAT member, Town of Ahoskie Customer Service Specialist
- John Rawls, CAT member, Town of Ahoskie Assistant Fire Chief & Building Inspector
- Jennifer Bracy, CAT member, Town of Ahoskie Clerk
- Zero (0) stakeholder attendees

Meeting Purpose:

The Phase 1 Open House is the culmination of Phase 1 activities and was held to present information from the process to stakeholders such as critical asset and natural infrastructure inventories, defined community vision and goals, and risk and vulnerability assessment results, for additional comment and input. Hardcopies of the public surveys were made available and team members were available to answer questions. Open house materials also included various displays such as an overview of the RCCP and a board defining resiliency with Hertford County/Ahoskie flooding related facts and demographic data, existing hazard mapping, critical assets and natural infrastructure lists, and FEMA and DCM informational handouts. Stakeholders were asked to rank vision and goals on the displays from 'no support' (1) to 'fully support (5), identify additional hazards on displayed maps using stickers, and define what resilience means to them. A PowerPoint slide show was also prepared that contained additional information on the RCCP, the CDC SVI, and the risk and vulnerability assessment steps.

Notes:

- Although no stakeholders attended despite a variety of advertisement methods, the CAT members were engaged and conversation centered around the completed Phase 1 activities, additional Phase 3 funding that has been secured by DCM and our team's success in getting projects to Phase 3 and 4. In general, CAT members were pleased with progress so far.

North Carolina RESILIENT COASTAL COMMUNITIES PROGRAM

AHOSKIE

Phase 2 Open House Summary

PHASE 2 OPEN HOUSE
THURSDAY, MARCH 14, 2024, 4:30 PM - 6:00 PM; AHOSKIE FIRE DEPARTMENT

Attendees:

- Jamie Heath, Mid-East Commission
- Gordon Marsh, RK&K
- Jennifer Bracy, CAT member, Ahoskie Planning Director/Town Clerk
- Morgan Askew, CAT member, Ahoskie Planning and Zoning Administrator/Floodplain Manager
- Mike Bradley, CAT member, Ahoskie Fire Chief
- David Hunt, CAT member, Ahoskie Councilman
- Randy Cherry, Kelford resident (works in Ahoskie)
- Susan McDoughtie, Aulander resident (works in Ahoskie)
- Vivian Chamblee, Ahoskie resident
- William Deanes, Aulander resident (works in Ahoskie)
- Charles Simmons, Ahoskie resident
- Pat Byrd, Ahoskie resident
- Charlie Morris, Ahoskie resident
- Charles Freeman, Ahoskie resident
- Martisa Raynor, Ahoskie resident
- Derrick R., Ahoskie resident
- Steven Lassiter, Ahoskie Public Works Director

Meeting Purpose:

The Phase 2 Open House is the culmination of Phase 2 activities and was held to present draft projects to the community. Attendees were asked to vote on projects to determine community priorities and assist the Community Action Team with the final round of project prioritization. Voting was conducted by placing stickers on project posters. Participants were also able to suggest additional projects. Education on the RCCP and on the various project types were also presented through posters, handouts, and an online Story Map, including education on green/nature-based solutions.

Notes:

- In addition to contractors and CAT members, many resident stakeholders participated in the Phase 2 open house (at least 11 according to sign in sheet).
- Draft priority projects were presented on posters and participants placed stickers on the posters to vote for their favorite projects.
- Draft projects received the following number of votes:

- Green stormwater infrastructure on town owned property: 0 votes
- Stormwater Action Plan: 1 vote
- Stormwater wetland at Ahoskie Creek Ballfields: 3 votes
- Green stormwater infrastructure at public housing developments: 4 votes
- Retrofit or relocate Town Hall: 4 votes
- Green stormwater infrastructure at RL Vann Center: 6 votes
- Stream cleanout: 7 votes
- Back-up generators at critical facilities: 11 votes
- Upgrade the stormwater system: 12 votes

- Additional suggested projects include the following:
  - Corner of Baker & West St. flooding issues after heavy rains

  - 0.4 acres

Public Boat Ramps

- No public boat ramps in Ahoskie's jurisdiction.

Wetlands

- Wetlands (NC CREWS data)
  - 1,071.4 acres identified in the Ahoskie jurisdiction.

Forests

- Working forest lands (NC Natural Heritage Program data)
  - Areas in the town limits and ETJ were identified.
- Rural forest landscape (NC Natural Heritage Program data)
  - Areas in the town limits and ETJ were identified.
- Urban forest landscape (NC Natural Heritage Program data)
  - The majority of the town limits has been identified as priority urban forest.

Floodplains

- 100-year floodplain (FEMA data)
  - 1,474.7 acres identified in the Ahoskie jurisdiction.
- 500-year floodplain (FEMA data)
  - 189.4 acres identified in the Ahoskie jurisdiction.

Surface Water Hydrology

- Rivers and streams (NC DEQ data)
  - Ahoskie Creek and its tributaries
  - Whiteoak Swamp and its tributaries
  - Horse Swamp and its tributaries
- High Quality Waters (NC DEQ data)
  - None identified in the Ahoskie area.
- 303(d) listed waters (EPA data)
  - None identified in the Ahoskie area.
- Fishery Nursery Areas (NC DEQ data) - Primary and secondary
  - None identified in the Ahoskie area.

Natural Areas

- Managed Areas (NC Natural Heritage Program data)
  - Includes nature preserves, registered heritage areas, conservation easements, other protected areas, and lands under federal ownership, state ownership, or local government ownership.
    - Two parcels identified in Ahoskie's jurisdiction.
      - 75.5-acre conservation easement parcel adjacent to Ahoskie Recreation Complex
      - 12.5-acre conservation easement parcel in northeastern ETJ

- Natural Areas (NC Natural Heritage Program data)
    - Sites that are of special biodiversity significance. A natural area's significance may be due to the presence of rare species, exemplary natural communities, or important animal assemblages, referred to collectively as "elements" of biodiversity.
        - None identified in Ahoskie's jurisdiction.

Biodiversity and Wildlife Habitat Assessment

- Biodiversity and Wildlife Habitat Assessment (NC Natural Heritage Program data)
    - The Biodiversity and Wildlife Habitat Assessment was developed by the N.C. Natural Heritage Program. It provides information about the relative priority of aquatic and terrestrial habitat, landscape function and connectivity.

Assess Vulnerability

This assessment explores the vulnerability of critical assets, natural infrastructure, and social systems. Use your team's Critical Asset & Natural Infrastructure Vulnerability

Vulnerability of critical assets and natural infrastructure to a hazard is a function of the exposure, sensitivity, and adaptive

Exposure refers to the probability of physical contact between an asset and a hazard.

Sensitivity is the degree to which an asset is impacted by a hazard.

Adaptive Capacity is the ability of an asset to change its characteristics or behavior in response to a hazard.

Vulnerability = Exposure + Sensitivity - Adaptive Capacity

Wildfire Risk data layers

Descriptions from Southern Group of State Foresters, Wildfire Risk Assessment Portal

WUI Risk Index

The **Wildland Urban Interface (WUI) Risk Index** layer is a rating of the potential impact of a wildfire on people and their homes. The key input, WUI, reflects housing density (houses per acre) consistent with Federal Register National standards. The location of people living in the Wildland Urban Interface and rural areas is key information for defining potential wildfire impacts to people and homes.

The WUI Risk Index is derived using a Response Function modeling approach. Response functions are a method of assigning a net change in the value to a resource or asset based on susceptibility to fire at different intensity levels, such as flame length. The WUI Risk Index range of values is from -1 to -9, with -1 representing the least negative impact and -9 representing the most negative impact. For example, areas with high housing density and high flame lengths are rated -9 while areas with low housing density and low flame lengths are rated -1. To calculate the WUI Risk Index, the WUI housing density data was combined with Flame Length data and response functions were applied to represent potential impacts for all unique conditions of WUI housing density and flame length. The response functions were defined by a team of experts based on values defined by the SWRA Update technical team. By combining flame length with the WUI housing density data, you can determine where the greatest potential impact to homes and people is likely to occur.

Flame Length is used as a measure of fire intensity. With the WUI Risk Index the analysis incorporates penetration into urban fringe areas so that outputs better reflect real world conditions for fire spread and impact in urban interface areas. With this enhancement, houses in urban areas adjacent to wildland fuels are incorporated into the WUI risk modeling. All areas in the South have the WUI Risk Index calculated consistently, which allows for comparison and ordination of areas across the entire state (and South).

The risk output maps are derived at a 30 meter resolution. This scale of data was chosen to be consistent with the accuracy of the primary surface fuels dataset used in the assessment. While not appropriate for site specific analysis, it is appropriate for regional, county or local protection mitigation or prevention planning.

Community Protection Zones

Community Protection Zones (CPZ) represent those areas considered highest priority for mitigation planning activities. CPZs are based on an analysis of the Where People Live housing density data and surrounding fire behavior potential. Rate of Spread data is used to determine the

areas of concern around populated areas that are within a 2-hour fire spread distance. This is referred to as the Secondary CPZ.

General consensus among fire planners is that for fuel mitigation treatments to be effective in reducing wildfire hazard, they must be conducted within a close distance of a community. In the South, the WUI housing density has been used to reflect populated areas in place of community boundaries (Primary CPZ). This ensures that CPZs reflect where people are living, not jurisdictional boundaries.

Secondary CPZs represent a variable width buffer around populated areas that are within a 2-hour fire spread distance. Accordingly, CPZs will extend farther in areas where rates of spread are greater and less in areas where minimal rate of spread potential exists. Secondary CPZ boundaries inherently incorporate fire behavior conditions. Primary CPZs reflect areas with a predefined housing density, such as greater than 1 house per 7 acres. Secondary CPZs are the areas around Primary CPZs within a 2 hour fire spread distance.

All areas in the South have the CPZs calculated consistently, which allows for comparison and ordination of areas across the entire region. Data is modeled at a 30-meter cell resolution, which is consistent with other SWRA layers.

Characteristic Fire Intensity Scale

Characteristic Fire Intensity Scale (FIS) specifically identifies areas where significant fuel hazards and associated dangerous fire behavior potential exist based on weighted average of four percentile weather categories. Similar to the Richter scale for earthquakes, FIS provides a standard scale to measure potential wildfire intensity. FIS consist of 5 classes where the order of magnitude between classes is ten-fold. The minimum class, Class 1, represents very low wildfire intensities and the maximum class, Class 5, represents very high wildfire intensities. Refer to descriptions below.

1. Class 1, Very Low:
Very small, discontinuous flames, usually less than 1 foot in length; very low rate of spread; no spotting. Fires are typically easy to suppress by firefighters with basic training and non-specialized equipment.

2. Class 2, Low:
Small flames, usually less than two feet long; small amount of very short range spotting possible. Fires are easy to suppress by trained firefighters with protective equipment and specialized tools.

3. Class 3, Moderate:
Flames up to 8 feet in length; short-range spotting is possible. Trained firefighters will find these fires difficult to suppress without support from aircraft or engines, but dozer and plows are generally effective. Increasing potential for harm or damage to life and property.

4. Class 4, High:
Large Flames, up to 30 feet in length; short-range spotting common; medium range spotting possible. Direct attack by trained firefighters, engines, and dozers is generally ineffective, indirect attack may be effective. Significant potential for harm or damage to life and property.
