

Annual Report to the North Carolina General Assembly

April 15, 2026

N.C. Department of Environmental Quality

Division of Waste Management

Division of Environmental Assistance & Customer Service

<https://deq.nc.gov/>

Pursuant to G.S. 130A-309.06(c)

Josh Stein, Governor

Reid Wilson, Secretary

N.C. Department of Environmental Quality

Michael E. Scott, Director

Division of Waste Management

Jamie Ragan, Director

Division of Environmental Assistance & Customer Service

DEQ

1646 Mail Service Center
Raleigh, NC 27699-1646
(919) 707-8200

Executive Summary:

In accordance with North Carolina General Statute § 130A-309.06(c), the North Carolina Department of Environmental Quality's (DEQ) Division of Waste Management (DWM) and Division of Environmental Assistance and Customer Service (DEACS) are required to provide an annual report on the status of solid waste management efforts in the State.

Session Laws 2017-10, Section 4.14(a); 2020-78, Section 7.2(b); and 2023-58, Section 2(b) expanded the scope of this report to include additional programmatic and statutory reporting requirements.

This report includes the following elements:

- Analysis of solid waste generation and disposal
- Total amounts of waste recycled and disposed during the previous calendar year
- Evaluation of local solid waste management programs and municipal recycling programs
- Assessment of county progress toward municipal solid waste reduction goals
- Recommendations for existing and potential solid waste reduction and recycling programs
- Evaluation of the recycling industry and success in enhancing markets for recycled materials.
- Recommendations to the Governor and the Environmental Review Commission
- Description of State procurement practices related to sustainable and durable materials
- Review of implementation of the North Carolina Scrap Tire Disposal Act
- Description of white goods management in the State
- Summary of recycled materials used in Department of Transportation contracts
- Activities related to abandoned manufactured homes
- Report on recycling discarded computer equipment and televisions
- Evaluation of the Brownfields Property Reuse Act
- Report on the Inactive Hazardous Waste Response Act
- Report on the Dry-Cleaning Solvent Cleanup Act
- Report on hazardous waste management program implementation and costs
- Report on Superfund and inactive hazardous site cleanup funding
- Report on the decommissioning of utility-scale solar projects

These requirements are fulfilled in the following report.

Chapter I: Brownfields

A. Executive Summary

This report to the General Assembly is required by the Brownfields Property Reuse Act of 1997 (G.S. 130A-310.40 et seq.) and describes the activities and status of the North Carolina Department of Environmental Quality's (DEQ) Division of Waste Management (DWM) Brownfields Redevelopment Section (Section) for the period of January 1, 2025, through December 31, 2025.

The Section continues to demonstrate success in advancing the safe redevelopment of brownfields properties across North Carolina. Through partnerships with developers, local governments, and stakeholders, the program supports economic growth, environmental protection, and community revitalization.

B. Program Output

During the reporting period, the Section finalized 48 brownfields agreements and 2 amendments, bringing the cumulative total to 790 agreements since program inception.

Key performance metrics for 2025 include:

- Section applications received: 83
- Brownfields agreements finalized: 48
- Brownfields agreement amendments finalized: 2
- Acres revitalized for productive reuse: 309.13
- Estimated committed capital investment: \$4.394 billion
- Approximately 100 sites in active construction
- At least 545 compliance-related requests or reports reviewed

All economic development benefits are achieved without state appropriations. The Section operates through developer-paid fees and cooperative agreement funding from the U.S. Environmental Protection Agency (EPA).

Since its authorization in 1997, the program has facilitated over \$30 billion in private investment and created thousands of jobs statewide. A detailed summary of agreements completed in 2025 is provided in Appendix A.

C. Program Background

Brownfields are abandoned, idled, or underused properties where environmental contamination complicates redevelopment due to liability concerns. These sites represent opportunities to support economic development, protect public health, and improve quality of life in both urban and rural communities.

The Brownfields Property Reuse Act (BPRA) authorizes DEQ to enter into agreements with prospective developers who did not cause or contribute to contamination. Under these

agreements, developers work with the Section to evaluate environmental risks and implement measures that make the property safe for a defined reuse.

Rather than requiring remediation to unrestricted use standards, the BPRA allows risk-based cleanup tailored to intended land use. These measures may include:

- Land-use restrictions (institutional controls)
- Engineering controls or mitigation systems
- Targeted contaminant removal

Developers who comply with agreement conditions receive liability protection from future state enforcement for existing contamination. This protection extends to lenders, tenants, and future property owners who did not contribute to contamination.

Additionally, properties under a brownfields agreement may qualify for a property tax exclusion, allowing incremental tax increases on improvements to be phased in over five years. This provides a financial incentive to offset redevelopment costs.

Since inception, the program has supported redevelopment of approximately 14,500 acres across North Carolina, preserving greenfields, reducing urban sprawl, and promoting sustainable land use.

D. Program Status

1. Production Branch

The Section finalized 48 brownfields agreements in 2025, representing a 37% increase over 2024. A total of 83 applications were received during the year, consistent with typical annual demand.

Ongoing programmatic improvements are expected to enhance efficiency and further increase production capacity in future reporting periods.

2. Property Management Branch

As the number of completed agreements has increased, so has the need for long-term compliance monitoring and assistance. To address this need, the Section established the Property Management Branch (PMB) in 2018.

The PMB is responsible for:

- Monitoring compliance with land-use restrictions
- Supporting new property owners
- Evaluating proposed land-use changes
- Addressing emerging environmental concerns
- Facilitating return to compliance where necessary

With 790 completed agreements, the demand for post-agreement oversight continues to grow.

The Section received funding through the Bipartisan Infrastructure Law (BIL) via a U.S. EPA cooperative agreement, with total funding not to exceed \$5.8 million over five years. An award of \$880,672 was received in June 2025.

Recognizing that federal funding is scheduled to end in September 2027, the Section implemented fee adjustments-developed with stakeholder input-to ensure long-term program sustainability without reliance on state appropriations.

3. Grants Collaborative

The Section continues to leverage federal funding to support brownfields assessment and redevelopment activities.

The 2022 U.S. EPA Brownfields Community-Wide Assessment Grant for States and Tribes (CWAG-ST) provided \$2 million to fund assessments in disadvantaged communities across:

- Appalachian region
- Lumber River Valley
- Northeastern Coastal Plain

To date, grant funds have supported:

- 13 Phase I Environmental Site Assessments
- 13 Phase II Environmental Site Assessments
- 3 structural evaluations
- 2 environmental management plans
- 1 wetlands survey

The Section has applied for an additional \$2 million in assessment funding, with an award anticipated in 2026.

Additionally, the Section was awarded funding through a Hurricane Helene Disaster Recovery Grant, with more than \$5 million allocated for assessment, remediation, and recovery planning in FEMA-declared counties. Implementation is expected to begin in 2026.

The Section also supports local governments through the Brownfields Community Network (BCN) by:

- Providing technical guidance
- Supporting EPA grant applications
- Offering training on brownfields redevelopment

Eighteen applications for EPA brownfields grants were submitted by North Carolina entities in the most recent cycle.

E. Program Inventory

An interactive map of the Program's cumulative inventory can be found online at the Section's website, www.ncbrownfields.org, or more specifically at this link:

<https://www.deq.nc.gov/about/divisions/waste->

management/science-data-and-reports/gis-maps/brownfields-projects-map-inventory-and-document-download. The inventory includes the following categories of sites:

Note. Data provided by the Division of Waste Management.

1. Recorded Brownfields Agreements

Recorded agreements are those that have been finalized and recorded with the county register of deeds.

Since 1997, the Section has completed 790 agreements, including 48 agreements and 2 amendments finalized in 2025. A detailed list is provided in Appendix A.

2. Active Eligible Projects

Active eligible projects are those that meet statutory criteria and are progressing through the brownfields process.

As of December 31, 2025, approximately 297 projects were active. These projects are in various stages, including:

- Data collection
- Risk analysis
- Agreement drafting and negotiation

Once assessments are complete, the Section evaluates risks, determines required actions, and initiates the statutory 30-day public comment period.

F. Improving Effectiveness

1. Leveraging Resources into Private Sector Investment

The Section continues to generate significant economic value through private investment and federal funding, without state appropriations.

In 2025, brownfields agreements facilitated \$4.394 billion in private investment, contributing to a cumulative total exceeding \$30 billion.

2. AccessDEQ Data Management System

The Brownfields Section was the first within DWM to implement the AccessDEQ data management system.

Launched in August 2024, the system supports:

- Electronic data submission
- Project tracking
- Invoicing and fee payment
- Improved data management

Beginning in 2026, annual certifications will be submitted entirely through AccessDEQ.

3. Additional Improvements

The Section implemented several process improvements in 2025, including:

- Revised assessment scope approval process
- Expanded stakeholder guidance and checklists
- Continued implementation of the *Minimum Mitigation and Sampling Requirements for Reuse* (May 2024)
- Streamlined agreement templates
- Required electronic submittals through AccessDEQ
- Adoption of Electronic Data Deliverables (EDD) for laboratory data
- Expanded Issue Resolution guidance on emerging topics

These improvements enhance efficiency, data quality, and stakeholder experience.

G. Anticipated Technical Challenges

The Section continues to address evolving environmental and redevelopment challenges, including:

- Emerging contaminants such as PFAS
- Redevelopment of complex sites, including former landfills
- Consideration of methane and hydrogen sulfide risks

The Section remains committed to adapting its processes to address these challenges while ensuring protection of public health and the environment.

H. Program Updates and Stakeholder Outreach

The Section maintains active engagement with stakeholders through targeted meetings and collaborative initiatives.

In 2025, stakeholder engagement contributed to statutory updates under S.L. 2025-53, which:

- Clarified fee authority
- Improved cost recovery mechanisms
- Addressed timing of tax incentives
- Authorized recovery of enforcement costs

Fee adjustments were developed through stakeholder collaboration to address anticipated reductions in federal funding. These adjustments were implemented on November 1, 2025.

The Section also continues to host quarterly stakeholder meetings, which are recorded and made publicly available to ensure transparency.

I. Fund Status

The Section operates without state appropriations and is funded through:

- Federal cooperative agreements
- Brownfields program fees

All fees are deposited into the Brownfields Property Reuse Act Implementation Account.

For fiscal year 2025:

- Beginning balance: \$2,686,308.85
- Fee receipts: \$2,027,074.22
- Disbursements: \$2,237,912.05
- Ending balance: \$2,475,471.02

Table I-1. Brownfields Property Reuse Act Implementation Account Balances (FY 2020–2025)

Date	Fund Balance
June 30, 2019	\$2,674,401
June 30, 2020	\$2,433,134
June 30, 2021	\$2,320,586
June 30, 2022	\$2,884,878
June 30, 2023	\$3,185,434
June 30, 2024	\$2,686,309
June 30, 2025	\$2,475,471

Note. Financial data provided by the Division of Waste Management.

Fee adjustments implemented in November 2025 are intended to maintain program sustainability, particularly in anticipation of the expiration of federal funding in 2027.

J. Further Information

Additional information on the Brownfields Redevelopment Section is available on the Section's website. The website includes an interactive map of completed and active sites and provides access to electronic records for each project.

Chapter II: Dry-Cleaning Solvent Cleanup Act

A. Executive Summary

As required by the Dry-Cleaning Solvent Cleanup Act (DSCA) of 1997 and amendments (G.S. 143- 215.104A et seq.), this report to the General Assembly provides an annual update on activities conducted in the DSCA program in fiscal year (FY) 2024-25. The DSCA of 1997 and its amendments created a fund for assessment and cleanup of dry-cleaning solvent environmental contamination at dry-cleaning and wholesale distribution facilities. It also authorized the program to develop and enforce rules relating to the prevention of dry- cleaning solvent releases at operating facilities.

Since the start of the DSCA Program began, 592 sites with known or suspected dry-cleaning solvent contamination have been reported to DEQ's Division of Waste Management (DWM). Of these, 540 have been certified into the DSCA Program. During FY 2024-25, the DSCA Program continued to make significant progress in all aspects of program implementation. Highlights of DSCA's accomplishments in remediating sites, protecting human health, and preventing future releases, include:

- Issuing No Further Action (NFA) notices for 7 remediated sites, with 8 additional sites identified as ready for NFA status;
- Installing subslab depressurization or passive venting systems at 4 businesses and one residence to address vapor intrusion;
- Monitoring vapor mitigation systems and control measures at 22 residences and 46 businesses;
- Monitoring effectiveness of groundwater remedies at 26 sites and maintaining two active groundwater remediation systems at two sites;
- Connected one residence to city water supply;
- Maintaining well water filtration systems for five residences;
- Issuing a total of 371 work authorizations to the program's independent contractors for work at certified sites;
- Conducting 266 compliance inspections at 241 active dry cleaners;
- Performing 14 outreach visits to educate and assist new business owners/operators with environmental compliance; and
- Distributing 124 perchloroethylene compliance calendars to assist with dry cleaners with record-keeping requirements.
- Distributing 210 self-inspection packets to hydrocarbon dry cleaners.

The DSCA Fund continues to be solvent with an end-of-fiscal year fund balance of approximately \$13.6 million with all funds fully encumbered. The program is using its resources efficiently, and expenditures are closely monitored to ensure adequate funding is maintained. Additional funds will be encumbered in FY 2024-25 as new contracts are implemented.

Based on data regarding site cleanup costs in North Carolina and the nation, cleaning up the 540 sites that have been certified in DSCA will cost an estimated \$256 million. DEQ estimates there may be as many as 1,500 contaminated dry-cleaning sites in North Carolina. Projected costs to clean up 50 percent of those sites are expected to exceed \$375 million. To ensure that the program and funding remain viable to adequately address sites certified and new sites yet to be discovered, House Bill 399 was signed on Nov. 1, 2019, which extended the DSCA Program and funding for an additional 10 years.

B. Program Activity

The General Assembly enacted DSCA to 1) clean up contamination from dry-cleaning solvents at both retail dry cleaners and wholesale solvent distribution sites, and 2) protect human health and the environment by preventing future dry-cleaning solvent contamination. The department made significant progress during FY 2024-25 in implementing the cleanup and compliance components of DSCA.

1. Assessing Health Risk at Sites and Conducting Site Cleanups

During the past fiscal year, DWM directed significant energy toward the assessment and remediation of sites with contamination from dry-cleaning solvents. DWM continued to implement initiatives to ensure the protection of human health by assessing and mitigating vapor intrusion (indoor air pollution from solvent contamination in the soil or groundwater) and providing clean water supplies to affected residents. During FY 2024-25, DWM staff and the program's three independent contractors performed the following activities:

- screened sites for imminent hazards, such as threatened water supply wells and vapor intrusion into buildings;
- abated indoor vapor hazards from contaminated soils and groundwater;
- continued testing and maintenance of vapor mitigation systems installed at businesses and residences;
- investigated active and abandoned dry-cleaning sites with potential dry-cleaning solvent contamination;
- provided temporary clean water supplies;
- conducted comprehensive site assessments delineating the extent of contamination;
- remediated contaminated soil;
- remediated contaminated groundwater;
- performed operation and maintenance of remediation systems; and
- evaluated site risks and prepared sites for closure.

2. Sites in the Program

Thirteen new sites were certified into DSCA during FY 2024-25 as compared to 15 sites in FY 2022-23. Table II-1 provides current and cumulative statistics for sites certified into the DSCA Program. A site becomes certified when a petitioner enters into an assessment and remediation agreement with DWM. Figure II-1 depicts the number of contaminated dry-cleaning sites participating in the DSCA Program. A list of certified sites, along with current site status, is

provided in Appendix A. Table II-2 provides the distribution of certified sites by classification and operating facility size.

The majority of certified sites, 77%, are entered into the DSCA program by property owners who purchase or own abandoned dry-cleaning properties and were not responsible for the contamination. The remaining petitioners are dry-cleaning business owners and/or operators.

Following certification, the risk to human health, safety and the environment are assessed, with specific emphasis on risk posed by contaminated well water and vapor intrusion into buildings. During FY 2024-25, the DSCA Program issued 371 authorizations and/or change orders to the program's independent contractors for work at certified sites, 267 of those were for assessment of impacted groundwater and/or vapor intrusion risk and 39 were for groundwater monitoring. Another 65 work authorizations issued were for interim actions such as soil excavation or installation of indoor air filtration units to mitigate vapor intrusion, operation and maintenance of remedial systems or water filtration systems, risk assessments and closure activities. The total number of work authorizations increased from 327 in FY 2023-24 to 371 in FY 2024-25.

Rules that establish a risk-based approach to assessing and cleaning up certified sites in the DSCA Program became effective on Oct. 1, 2007. These rules and associated guidance allow program staff to determine the risk posed to human health and the environment at each site and, if necessary, to calculate the appropriate cleanup levels for soil and groundwater.

During FY 2024-25, DWM issued No Further Action (NFA) notices for 7 contaminated dry-cleaning sites in the program, bringing the total to 142 DSCA sites that have been given NFA status since the risk-based rules became effective in October 2007. DWM is recommending no further action at an additional 8 DSCA sites ("Sites Pending Closure" in Table II-1). The program anticipates issuing between 3 and 5 NFA notices in the coming fiscal year. Preparing a site for No Further Action involves completing an assessment of the extent and magnitude of contamination, evaluating the risks posed by the contaminants, mitigating any unacceptable risks, remediating contamination as needed, ensuring stability of the groundwater contaminant plume, preparing a risk management plan, soliciting public input, and recording notices to ensure that site conditions remain protective. In accordance with DSCA statutes, the program provides the proposed risk management plan and associated notices to the appropriate local governments (counties and municipalities) and announces the availability of the plan to the public through local newspapers, direct mailings to property owners on or adjacent to the contamination site, and by posting a notice at the site.

Table II-1. DSCA Certified Site Status

Certification Status	FY 2024-2025	Cumulative
Contaminated Sites	15	592
Certified	13	540
Determined Ineligible	-	4
Not Certified	2	48
Certified Sites Pending Closure	8	-
Certified Sites Closed	7	142

Figure II-1. Known dry-cleaning solvent contaminated sites in North Carolina

Table II-2. Classifications of DSCA Certified Sites (June 30, 2025)

Classifications	Number of Sites	Percentage
Abandoned	371	69
Wholesale Distribution	3	1
Operating	166	30
Small Size (1-4 employees)	93	56
Medium Size (5-9 employees)	42	25
Large Size (>10 employees)	31	19

Table II-3 provides a summary of the actions undertaken to address direct threats to human health and the environment. During FY 2024-25, the DWM continued to supply clean water to five residences where municipal water is not available and connected one residence to the municipal water supply. In total, the division has provided municipal water to 67 residences and 14 businesses that have had their water supply wells impacted or threatened by dry-cleaning solvent contamination from 25 DSCA sites.

Table II-3. DSCA Site Cleanup Statistics

	FY 2024-25	Cumulative
<i>Water Supply Provided</i>		
Municipal Water Connection - residences	1	74
Municipal Water Connection - businesses	-	14
Temporary Water Supplied - residences	1	35
Temporary Water Supplied - businesses	-	7
Number of DSCA sites involved	-	25
<i>Vapor Intrusion (VI) Mitigated</i>		
VI Control System Installed - residences	1	24
VI Control System Installed - businesses	4	99
Number of DSCA sites involved	1	80
<i>Active Remediation Implemented</i>		
Number of DSCA Soil Remediations Implemented	1	112
Number of DSCA sites involved	1	100
Number of DSCA Groundwater Remediations Implemented	1	78
Number of DSCA sites involved	-	57

Addressing indoor air pollution from tetrachloroethylene (PERC) releases and breakdown contaminants continues to be a high priority since many DSCA sites have occupied structures on or adjacent to PERC contamination. During FY 2024-25, the program:

- Installed subslab depressurization or passive venting systems at 4 businesses and one residence to address vapor intrusion.

Since 2006, DWM has installed vapor control measures at 99 businesses and 24 residences because of dry-cleaning solvent contamination from 80 DSCA sites.

During FY 2024-25, the program monitored the effectiveness of groundwater remedies at 26 DSCA sites and maintained two active groundwater remediation systems at two sites. During the life of the DSCA Program, DWM implemented 112 soil cleanup actions at 100 DSCA sites and conducted 78 groundwater cleanup actions at 57 DSCA sites.

3. Site Prioritization System

The DSCA Program requires that site cleanup disbursements be made on higher priority sites first. Data from the program's vapor intrusion investigations indicate that this type of direct human exposure is a threat at several DSCA sites. To ensure that this health concern receives appropriate attention, the program has revised its prioritization method to include potential indoor air threats. Due to the growing number of DSCA sites and the complex nature of assessing and remediating PERC contamination, the DSCA Program continues to evaluate and implement cost-efficient measures to ensure the fund's solvency.

4. Vapor Intrusion

Among states with dry-cleaning programs, the North Carolina DSCA Program continues to work at the forefront in addressing vapor intrusion issues at dry-cleaning solvent-contaminated sites. Due to the volatility of PERC – one of the most common dry-cleaning solvents – the potential for vapor intrusion exists at many dry-cleaning sites. The DSCA Program has shared its large library of North Carolina vapor intrusion data with the EPA to supplement data it uses to establish attenuation factors and screening levels. The EPA welcomed North Carolina's data from commercial structures in the southeastern United States.

An issue that continues to affect some contaminated dry-cleaning sites involves the presence of trichloroethylene (TCE) in indoor air. Not only is TCE a chemical produced by the breakdown of PERC in the environment, but TCE is also a spotting agent in the dry-cleaning industry as well as a common solvent in many industrial settings. At contaminated sites, health threats from volatile contaminants in indoor air are often associated with long-term (chronic) exposure to chemicals migrating from the subsurface into indoor air. Recent studies along with other toxicological information suggest that short-term (acute) exposure to TCE in indoor air may raise the risk for fetal heart malformation during the first trimester of pregnancy. Staff from the division's cleanup programs, including DSCA, worked with the department to develop protocols to promptly address acute exposure situations. When site data suggest that there is a potential for exposure to unacceptable levels of TCE in indoor air, staff provide immediate notification and educational resources to affected parties. The DSCA Program promptly mitigates risks to indoor air quality when dry-cleaning solvent contamination in the environment is causing unacceptable risks in indoor air. Since 2006, DWM has installed vapor control measures at 99 businesses and 24 residences because of dry-cleaning solvent contamination from 70 DSCA sites. DSCA is currently performing monitoring and maintenance of vapor mitigation systems and control measures at 22 residences and 46 businesses.

5. Investigation of Potential New Sites

In 2007, DSCA was amended to allow the program to spend up to 1 percent of the DSCA fund balance each year to investigate active and abandoned dry-cleaning sites that the program believes may be contaminated. If dry-cleaning solvent contamination is found, the potentially responsible party is given the choice of entering the program as a petitioner or allowing the site to be addressed under the Inactive Hazardous Sites Branch. If they choose the latter, the responsible party may be required to reimburse DSCA for the investigation costs.

There has been an increase each year in the number of sites with potential dry-cleaning solvent contamination identified or referred for investigation. A number of these do not get investigated due to the spending limit for investigations. In July 2022, S.L. 2022-74 (H103) included an amendment to DSCA, G.S. 143-215.104C(d) which increased the amount of the fund that can be used for investigation of contaminated sites to 3%.

Under this provision, the program did not conduct any limited investigations at potential dry-cleaning contaminated sites during FY 2024-25. Since 2007, DSCA has investigated 125 sites for potential dry-cleaning solvent contamination, with 91 of those sites becoming certified into the program.

The DSCA Program continues to partner with other agencies to identify new sites and coordinate assessment and cleanup efforts to ensure effective use of state resources. Data provided by DEQ's Underground Storage Tank Section, Brownfields Program, Inactive Hazardous Sites Branch, Public Water Supply Section, and municipal environmental programs reveal monitoring wells and supply wells with contaminants that may be from dry-cleaning operations. DSCA staff compare contaminated well locations to known locations of more than 2,000 active and abandoned dry-cleaning facility sites to help identify potential dry-cleaning contaminant sources. The program also shares data and coordinates assessment and cleanup activities with other DWM programs, such as the Brownfields Program and Underground Storage Tanks Section, to ensure that remedial strategies are protective and implemented effectively.

6. Identified Contamination Sites

A total of 592 sites known or suspected of being contaminated by dry-cleaning solvents have been reported to the department. The DSCA Program has certified 540 of these sites into the cleanup program, as noted in Table II-1. Appendix A lists, by county, the sites with known or suspected dry-cleaning solvent contamination reported to the department and sites certified in the program. During FY 2024-25, the DSCA Program certified 13 new sites into the program.

7. DSCA Contracts

The program currently manages three contracts with three state-lead environmental engineering firms, with the fund balance of \$13.6 million fully encumbered in contracts. The contracts establish terms and conditions under which qualified environmental engineering firms to assess and remediate contaminated dry-cleaning sites in the DSCA Program.

8. Customer Service Initiatives

During FY 2024-25, the program continued to promote the DEQ mission of excellent customer service by making public records more accessible, providing easy access to DSCA site locations, engaging communities affected by dry-cleaning solvent contamination, assisting property owners, lenders and interested parties with property transactions and sharing program updates with interested stakeholders on a regular basis. The program uses its website to provide a variety of information including, but not limited to maps, public records access, forms, rules and statutes, updates on sites of interest, stakeholder meeting information, and staff contact information.

a). Public Records

Improving the accessibility to public records has been a high priority for all DWM programs. To date, all the DSCA Program's current and legacy records have been digitized, and the frequently requested document types have been uploaded to the Laserfiche document management system. Laserfiche is available through DEQ's and DWM's websites and allows users the ability to search and download public records.

In FY 2024-25, the DSCA Program began efforts to enter all site laboratory data and results into the online EQuIS environmental data management system and will continue this process into FY 2025-26.

b). Site Location Information

The availability of site location information is important to the public and many decision-makers, including property buyers and sellers, lenders, municipalities, and state and local environmental programs. The program continues to maintain location data on a web-based map viewer on the DWM website. In addition, the program has consistently supported and been involved in the development of DWM's well-permitting support system, which is an online site locator tool based on the ARC-GIS Online platform.

c). Meetings and Presentations

The division continues to encourage stakeholder involvement in the DSCA Program. The existing stakeholder group is comprised of representatives from the dry-cleaning industry, environmental organizations, attorneys, environmental consultants, and the public. Program representatives hold semi-annual meetings to report on accomplishments and initiatives, solicit feedback on topics that affect the program and present remediation projects of interest to the attendees. Virtual stakeholder meetings were held in October 2024 and May 2025. In upcoming FY 2025-26, it is anticipated that stakeholder meetings will continue to be held virtually or will be a hybrid of in-person and virtual meetings. The virtual stakeholder meetings have increased participation since stakeholders, particularly dry cleaner owners/operators can participate from their hometowns and do not have to leave their businesses to travel to Raleigh to attend.

The DSCA Program continues to participate as one of the original members of the State Coalition for the Remediation of Drycleaners (SCRD). The coalition was established in 1998, with support from the EPA's Office of Superfund Remediation and Technology Innovation. It is comprised of representatives from 25 states with established dry-cleaning remediation programs or are managing dry-cleaner remediation under other authorities. The coalition conducts quarterly conference calls throughout the year to provide a forum to share and discuss program information, remediation technologies, case studies, state initiatives, or state and federal hot topics.

d). Property Assistance

The DSCA Program provides continuous assistance to property owners, prospective buyers/developers, lenders and interested parties to facilitate transactions which provide for the reuse of contaminated property. Correspondence and phone calls are frequently provided to

explain the DSCA Program or the status of a site already in the program which allows a comfort level to interested parties to move forward with property transactions.

C. Facility Compliance

The Environmental Management Commission has been authorized under the Dry-Cleaning Solvent Cleanup Act to develop rules that operating dry-cleaning facilities must follow to prevent environmental contamination by dry-cleaning solvents. During FY 2024-25, the DSCA Program had three inspectors performing outreach visits, inspections and enforcement at dry-cleaning facilities and wholesale distribution facilities statewide.

In addition to the program's Minimum Management Practices (MMP) regulations, enforcement authority is delegated to the DWM for violations of applicable air quality rules. The division's, Hazardous Waste Section has granted authority to the DSCA Compliance Program to inspect dry cleaners for compliance with the Resource Conservation and Recovery Act (RCRA) Hazardous Waste regulations. This allows one program in DEQ to ensure compliance with all environmental regulatory requirements and gives dry-cleaners and the public a single DEQ point-of-contact for compliance questions or concerns.

1. Educational Assistance Visits

During FY 2024-25, DWM inspectors conducted 14 outreach educational assistance visits at active dry-cleaning facilities. Typically, outreach visits in the program currently are conducted when a new owner/operator takes over a facility or a new facility opens. The dry-cleaning industry is declining or stable and there are no new facilities opening on a regular basis. However, during routine inspections, DWM inspectors educate facility owners and operators on a variety of topics including record keeping, waste storage, filter changes, etc. To date, DSCA inspectors performed 109 educational outreach visits at active dry-cleaners – many of which had not previously been inspected by a DEQ program. These outreach visits were mainly conducted when the compliance program was implemented and in the immediate years afterward (2012-2015) to familiarize the facilities with new regulations. This outreach educates owners and operators regarding the MMPs, hazardous waste and air quality regulations.

2. Inspections and Enforcement

The DSCA Program conducts unannounced, full compliance inspections at regulated dry-cleaning facilities and wholesale distribution facilities to ensure that dry-cleaning facilities are compliant with all applicable regulations. In setting inspection priorities, the program considers multiple factors including facility- specific compliance history, business owner/operator changes, emerging solvents or equipment, and regulatory changes at the federal, state, or municipal level.

At the beginning of FY 2024-25, there were 326 dry-cleaning facilities subject to inspection by the DSCA Program. At the close of FY 2024-25, there were 300 dry-cleaning facilities subject to inspection by the DSCA Program. The number of dry-cleaning facilities operating continues to decline due to closures and many of the cleaners are switching to solvents that are not subject to inspection by the DSCA Program. The decline in the number of dry-cleaning facilities subject to inspection by the DSCA Program are shown in Figure II-2.

Figure II-2. Dry-Cleaning Facilities Subject to Inspection

The goal of the compliance program is to inspect facilities at a minimum of once every 2 years. In May 2022, a self-inspection checklist and process was developed for dry-cleaning facilities using hydrocarbon solvents. These facilities pose less of a threat to the environment than facilities using perchloroethylene solvent and compliance can be managed in a more efficient manner allowing inspectors to concentrate on perchloroethylene cleaners. Following implementation of this self-inspection process for hydrocarbon dry-cleaning facilities, the goal will be to inspect all perchloroethylene dry-cleaning facilities at a minimum once a year.

During FY 2024-25, the DSCA Program staff conducted 266 inspections at 241 facilities. Some facilities require repeat visits accounting for the difference of 25 inspections/facilities. Common violations identified were the failure to install spill containment under dry-cleaning machines and waste solvent storage areas, failure to seal waste solvent containers, failure to inspect dry-cleaning equipment, and failure to record and maintain National Emission Standards for Hazardous Air Pollutants recordkeeping logs.

To be eligible to participate in the DSCA Program, all operating dry-cleaning facilities and wholesale distribution facilities must be compliant with the DSCA MMPs. During FY 2024-25, DSCA staff inspected 6 active facilities seeking entry into the cleanup program.

3. Additional Compliance Outreach

The DSCA Compliance Unit continues to evaluate and implement enhancements to improve compliance rates among the regulated community.

Since 2007, the DSCA Program has produced a PERC compliance calendar that provides all applicable rules, recordkeeping, guidance, and reference information in one document for the convenience of facility owners and operators. The calendar has received positive reviews from North Carolina dry-cleaners and industry officials in other states, where it has been praised for its comprehensive scope and functionality. In FY 2024-25, the program mailed or hand-delivered approximately 124 PERC calendars to dry-cleaning facilities statewide for the 2024 calendar year. The calendars include instructions in Spanish and Korean.

Since the 2016 calendar year, the program had also produced a petroleum solvent compliance calendar for cleaners who operate dry-cleaning machines that use regulated petroleum solvent. Through collaboration with stakeholders and DEQ small business assistance personnel, it was determined that a self-inspection checklist required to be submitted annually by dry-cleaning facilities using regulated petroleum solvent could be an efficient way to manage compliance at these facilities that pose less of a threat to the environment regarding contamination. The self-inspection checklist will be used by the compliance inspectors to prioritize inspections at these facilities. Submission of the checklist does not exclude any facility from inspection by the DSCA Program, and it is still the goal of the program to inspect these facilities at a minimum once every two years. In FY 2024-25, the program mailed or hand-delivered approximately 210 self-inspection checklist packets to dry-cleaning facilities statewide to be returned January 2025. The packets also included informational materials, such as an emergency information form, facility change status form, regional inspector map, etc., to assist dry-cleaning facilities with compliance. The packets are also available in Spanish and Korean.

The DSCA Program has access to a hazardous waste inspector who speaks Korean fluently and translates outreach materials and regulations to better serve North Carolina's regulated community. Reducing language and cultural barriers help improve communication and compliance among Korean-speaking dry-cleaning owners and operators. The Korean-speaking members of the dry-cleaning community have responded very positively to DSCA's efforts to improve communication. The program continues to evaluate ways to better enable compliance among all North Carolina dry-cleaners and wholesale distribution facilities.

D. Program Financial Status and Projections

1. Fund Receipts and Disbursements

The primary funding sources for the dry-cleaning solvent cleanup fund are a tax on dry-cleaning solvents, the state portion of the current sales tax on dry-cleaning, and co-payments from petitioners participating in the cleanup program. Disbursements consist primarily of payments to the program's independent contractors for site assessment and remediation and program administration costs. DSCA Fund receipts and disbursements for the FY 2024-25 and for the life of the DSCA Program are shown in Table II-4. For FY2024-25, total receipts were approximately \$10.2 million and total disbursements were approximately \$10.9 million.

Table II-4. DSCA Fund through Fiscal Year 2024-2025

Receipts:	FY 2024-2025 (through 6/30/25)	Duration of Program
Solvent Tax Revenue:	\$ 50,801.98	\$ 12,691,158.47
Sales Tax Revenue:	\$ 10,040,098.33	\$ 181,395,506.52
Petitioner Payments (fee/copay):	\$ 117,502.38	\$ 2,492,621.98
Miscellaneous:	\$ -	\$ 195,051.93
Rebate:	\$ -	\$ 28,870.11
Interest:	\$ -	\$ 7,522,262.17
Total Receipts:	\$ 10,208,402.69	\$ 204,325,471.18
Disbursements:		
Dept. of Revenue Admin:	\$ -	\$ 57,272.02
Reimbursements/Payments:	\$ -	\$ 1,963,993.23
Contracts:	\$ 9,129,365.42	\$ 149,191,018.91
Haz Waste Fees:	\$ 27,800.00	\$ 2,057,953.41
County Well Permit Fees:	\$ 5,340.00	\$ 876,460.00
Transfer to Inactive Haz Sites:	\$ -	\$ 400,000.00
Transfer to Green Square Proj:	\$ -	\$ 1,291,035.00
Transfer - Budget Shortfall:	\$ -	\$ 6,475,812.93
DEQ Admin:	\$ 1,739,917.74	\$ 28,444,009.65
Total Disbursements:	\$ 10,902,423.16	\$ 190,757,555.15
Fund Balance as of 6/30/25		\$ 13,567,916.03

2. Estimated Future Assessment and Remediation Expenditures

During FY 2024-25, fund expenditures directly related to the implementation of DSCA was like the previous fiscal year (see DSCA-Related Disbursements in Table II-5 and Figure II-3). The DSCA Program closely monitors expenditures to ensure adequate funding is maintained to assess all sites, perform mitigation and remediation activities when needed, and move sites toward closure. Site work expenditures have reduced the fund balance from its peak of \$37.6 million in 2008 to a low of \$5.6 million in 2016. DSCA Fund receipts for the past thirteen years have been relatively stable, ranging between approximately \$8 million and \$10 million per year. The total FY 2024-25 receipts from the solvent tax, sales and use tax, and petitioner payments increased approximately 7% from the FY 2023-24 receipts, compared to an increase of approximately 11% the previous fiscal year. The DSCA Fund receipts for FY 2025-26 are expected to be relatively stable and similar to FY 2024-25.

Table II-5. Historic DSCA Fund Statistics

Fiscal Year	Receipts	Disbursements	Fund Balance
FY 03-04	9,487,233.94	489,024.96	13,547,987.50
FY 04-05	9,660,612.84	1,806,911.93	21,401,688.41
FY 05-06	9,913,615.29	2,126,835.62	29,188,468.08
FY 06-07	10,687,669.06	4,184,051.63	35,692,085.50
FY 07-08	10,307,477.83	8,413,240.75	37,586,322.59
FY 08-09	9,513,473.12	14,803,890.84	24,281,705.87
FY 09-10	8,147,167.40	16,808,702.01	15,658,644.76
FY 10-11	8,627,803.92	11,222,140.59	12,915,294.16
FY 11-12	9,124,256.44	8,208,478.47	13,859,866.72
FY 12-13	8,580,621.94	9,835,705.15	12,604,783.26
FY 13-14	8,190,699.90	11,958,967.35	8,836,516.06
FY 14-15	8,181,706.31	10,939,433.40	6,078,788.97
FY 15-16	8,284,815.52	8,741,519.44	5,622,085.05
FY 16-17	8,393,644.71	7,349,688.20	6,666,041.56
FY 17-18	8,681,394.03	7,429,454.53	7,917,981.06
FY 18-19	9,063,204.11	7,801,661.38	9,179,523.79
FY 19-20	9,180,783.26	7,970,265.54	10,390,041.51
FY 20-21	8,717,494.34	5,841,099.71	13,266,436.14
FY 21-22	7,969,523.95	7,514,248.46	13,721,711.63
FY 22-23	8,465,957.32	7,657,060.04	14,530,608.91
FY 23-24	9,492,780.93	9,761,453.34	14,261,936.50
FY 24-25	10,208,402.69	10,902,423.16	13,567,916.03

Figure II-3. DSCA Fund Trends

Using the DSCA Program’s state-lead cleanup costs and national estimates of total average costs to clean up contaminated dry-cleaning sites, the program can project the estimated costs to address the sites currently certified in the DSCA Program. Using an estimated average total cleanup cost of \$500,000 per site, it will take more than \$264 million (not including DEQ’s administrative costs) to address the 540 sites that have been certified in the program. Based on data from the N.C. Department of Labor, there are at least 2,000 active and abandoned dry-cleaning facilities in the state. Investigations performed across the nation indicate that contamination is present in at least 75 percent of all dry-cleaning operations. Applying this percentage to the number of current and former facilities in North Carolina, a total of 1,500 contaminated sites may be present, equaling an estimated \$750 million in cleanup costs. If only 50 percent of these contaminated sites are accepted into the DSCA Program, the projected total cleanup cost (adjusted for inflation) would be approximately \$375 million.

E. DSCA Administrative Costs

According to DSCA, up to 20 percent of annual revenues deposited into the fund may be used by DEQ and the North Carolina Attorney General’s Office to administer the program. The administrative costs-to- revenue ratio has been relatively steady, fluctuating between 17 and 19 percent since FY 2018-19 and is shown in Figure II-4. The current administrative cost-to-revenue ratio is at 17 percent and is expected to slightly increase in the coming fiscal year. Vacancies are being filled at higher starting salaries as dictated by cost of living and equity pay. The costs of benefits, computers and other supplies and covering legislative salary increases are also covered under administrative costs. Due to these increases, if the 20 percent of annual revenues to administer the program is not adequate in the future, a legislative change to increase the administrative percentage may be necessary.

Figure II-4. DSCA Administrative Expenses

F. Actions to Ensure Fund Solvency

Between 2008 until 2011, the increased expenditures on-site cleanups had substantially reduced the fund balance. The program continues to experience an increase in the number of sites petitioning into the cleanup program, along with an increase in vapor intrusion-related assessment and mitigation. As demonstrated during previous years, the program continues to closely monitor and adjust expenditures to ensure that funds are available to address certified sites. The DSCA Program's prioritization strategy ensures that sites requiring remediation are addressed in priority order while maintaining fund solvency.

As noted above, total collections for FY 2024-25 were approximately \$10.2 million. The fund has a balance of approximately \$13.6 million which is fully encumbered in contracts. The DSCA Fund is solvent. The remaining fund balance is expected to be encumbered in new contracts in FY 2024-25.

The DSCA Program implements measures to closely monitor expenditures and prioritize spending at identified dry-cleaning contaminated sites to ensure that potentially reduced funds are sufficient to address risk to human health and safety.

The DSCA Program is entirely receipt funded by taxes on dry-cleaning solvents and the dry-cleaning related sales and use tax. These taxes are appropriately used to assess and remediate dry-cleaning solvent contamination. Given the DSCA Program's broad support by the dry-cleaning industry and its success in cleaning up contaminated dry-cleaning sites, mitigating risks and preventing future releases, legislation was signed Nov. 1, 2019, to extend the program and the funding for an additional 10 years. The sunset date for the DSCA Program is now Jan. 1, 2032. The dry-cleaning solvent tax was extended to Jan. 1, 2030, and the sales and use tax transfer was extended to July 1, 2030.

The DSCA Program provides a cost-effective means of protecting the public and the environment from risks posed by dry-cleaning solvent contamination and provides property owners and dry cleaners the opportunity to allow site contamination to be remediated at costs that they can afford.

G. Program Challenges

Over the past decade, contaminant vapor intrusion has been a focal point for the DSCA Program as discussed in Section B.4. The DSCA Program is a leader in rapid response to address vapor intrusion issues across North Carolina at DSCA sites and assists other programs with technical expertise when needed. Typically, within 24 hours of verifying contaminant concentrations in indoor air that exceed the inhalation action level, the DSCA Program staff is on-site deploying air handling units to immediately reduce exposures to below the action levels. This scenario occurs approximately 10 times a year. The DSCA Program then develops a plan to address vapor intrusion on a more permanent basis through remediation or installation of a more robust mitigation system. Not every DSCA site requires rapid response to vapor intrusion because the contaminant levels in indoor air do not exceed immediate action levels. However, vapor intrusion is an issue that is addressed by the DSCA Program at approximately 80 percent of its sites to protect against current and future exposure to potential vapor intrusion contaminants. The DSCA Program meets the challenges of vapor intrusion by remaining at the forefront of technical assessment and mitigation of sites and has set the standard for innovative sampling techniques and the collection of data to assist EPA with vapor intrusion guidance.

The 15A NCAC 02S rules, which are Rules and Criteria for the Administration of the Dry-Cleaning Solvent Cleanup Fund, are currently going through the readoption process which began with a presentation to the Environmental Management Commission's Groundwater and Waste Management Committee in May 2024. The rule adoption process is expected to conclude in May 2027.

The number of contaminated properties being redeveloped has been increasing. These properties are redeveloped while the site is being addressed in the DSCA program and after the site has been closed by DSCA using land-use restrictions. The burden on staff time and expertise to address these redevelopment needs will require dedicated staff members to oversee the activities at these sites. Additionally, dedicated staff will be necessary to oversee the post closure activities at the growing number of sites closed under the DSCA program to ensure compliance with land-use restrictions and protection of public health. The Brownfields program has a property management unit that performs these functions, and it is anticipated that the Superfund Section will establish a similar unit in the coming year to address redevelopment and post closure sites in all Superfund programs, including DSCA.

Chapter III: Hazardous Waste Program

A. Executive Summary

This annual report to the General Assembly describes the activities of North Carolina's Hazardous Waste Management Program, Resident Inspector Program, and Mercury Switch Removal Program for State FY 2024-25 pursuant to G.S. 130A-294(i). North Carolina's Hazardous Waste Management Program protects human health and the environment from the risks presented by the potential mismanagement of hazardous waste.

- Hazardous waste received by the nine commercial hazardous waste facilities in North Carolina in FY 2024-25 amounted to 30,890.74 tons. This data is from the Resident Inspector Program (RIP).
- Hazardous waste generated by businesses and industries in North Carolina in FY 2024-25 totaled approximately 114,012 tons. Hazardous waste generated data is from the EPA's Resource Conservation Recovery Act Information (RCRAInfo) database system.
- The number of small quantity generators (SQGs) and very small quantity generators (VSQGs) increased in FY 2024-25. The quantity of hazardous waste generated by these facilities (generators) is not available since there is no regulatory requirement for these facilities to report hazardous waste generated.
- Inspection, compliance assistance, and enforcement activities at hazardous waste facilities resulted in safe management of an estimated 61,325 gallons and 686,592 pounds of hazardous waste, 8,749 gallons and 236,913 pounds of non-hazardous waste, and 155 pounds of universal waste,

In addition, the program continues to make significant progress in cleaning up contamination at permitted hazardous waste management facilities. The national goal is for final remedies to be constructed and fully operational at 95 percent of these facilities nationally. This does not necessarily mean remediation will have been completed. Currently, in North Carolina, 66 percent of facilities have had a remedy constructed. It is important to note that after a stable universe of facilities for many years, additional facilities have and continue to be added to the Resource Conservation and Recovery Act (RCRA) universe as they are discovered.

B. Hazardous Waste Management Program

North Carolina was authorized to implement the federal hazardous waste regulatory program in lieu of the EPA in 1980. Federal authorization is the process through which EPA delegates primary program implementation and enforcement responsibility to states while maintaining an oversight role to ensure national consistency.

The federal program, established under the RCRA Subtitle C, regulates the generation, transport, treatment, storage, disposal, and recycling of hazardous waste. The program also governs the environmental remediation of hazardous waste treatment, storage, and disposal facilities that have been contaminated by prior waste management activities. The N.C. Hazardous Waste Management Program is administered and enforced by DWM's Hazardous Waste Section.

1. Hazardous Waste Generation, Management, and Remediation

a. Generation

Hazardous waste is defined as industrial material destined for disposal or recycling that may be ignitable, corrosive, reactive, and/or toxic and, as such, poses a risk to human health and the environment if improperly managed. Comprehensive hazardous waste generation data is available biennially through RCRA Info (see Section III-3, the Information Management Section of this report).

In FY 2024-25, there were approximately 420 (as of January 13, 2026, source RCRAInfo) North Carolina large quantity generators. The amount of hazardous waste generated in FY 2024-25 was approximately 114,012 tons.

In FY 2024-25, there were approximately 1,309 (as of January 13, 2026) small quantity generators in North Carolina and 6,746 (as of January 13, 2026) very small quantity generators. These generators are subject to reduced reporting and regulatory requirements because they are often small businesses for whom periodic reporting could be overly burdensome. They are also subject to reduced reporting because the amounts of waste generated at each site are less likely to present significant risks to human health and the environment. However, these facilities collectively generate a significant amount of hazardous waste that must be managed properly and in compliance with applicable rules. Significant resources are devoted to technical assistance, outreach, and compliance activities at these facilities. Staff conduct compliance assistance visits or other types of inspections as a way of outreach to help facilities comply with the RCRA hazardous waste regulations.

b. Management

Comprehensive hazardous waste generation data is available biennially. In FY 2024-25 North Carolina's nine commercial hazardous waste facilities received and processed 30,890.74 tons of hazardous waste from offsite generators.

c. Remediation

There are 72 active hazardous waste treatment, storage, disposal, and corrective action facilities in North Carolina. They are permitted RCRA facilities. Each facility is governed by a permit, an enforceable order, or another operational control mechanism for the management and/or remediation of hazardous waste.

There are currently 86 facilities subject to the RCRA Corrective Action Program, which addresses the remediation of environmental contamination at permitted hazardous waste facilities. These 86 facilities are sites with waste releases that must be remediated and include Federal Hazardous and Solid Waste Amendments (HSWA-only) sites that are no longer active facilities and have permits to remedy past releases. New releases at facilities are added to the RCRA Corrective Action Program upon discovery. The Hazardous Waste Program tracks the remediation progress at these sites using five environmental indicators:

- Human exposure controlled
- Groundwater contamination controlled
- Cleanup remedy constructed
- Ready for Anticipated Use
- Remedy completed

The program continues to make significant progress in overseeing the remediation of contamination at permitted hazardous waste management facilities. The national goal is for 95 percent of these facilities to meet three EPA environmental indicator priorities. Currently, in North Carolina, 95 percent of facilities have human exposure controlled, 91 percent have groundwater contamination controlled, and 66 percent have a remedy constructed. It is important to note that beginning FY 2022-23 EPA has granted states the ability to add sites to the RCRA Corrective Action Universe for new releases, which reflects lower completion percentages in comparison with previous years. In addition, EPA set goals of 32 percent of the facilities completing all remediation and identifying facilities that are Ready for Anticipated Use (RAU CA800). Currently, 27 percent of North Carolina facilities have all hazardous waste remediation completed.

The Hazardous Waste Section summary of corrective action at RCRA facilities is summarized in Table III-1 below.

Table III-1. Corrective Action at RCRA facilities

RCRA	CA050	CA725	CA750	CA550	CA800	CA900/ CA999
Corrective Action Universe Tracking (i)	Assessment Completed (ii)	Current Human Exposures Under Control Determination (iii)	Groundwater Releases Controlled Determination (iv)	Remedy Construction (v)	Ready for Anticipated Use (vi)	CA Performance Standards Attained/ CA999 CA Process Terminated (vii)
FY 2024-25	0	0	0	0	0	0
Accomplishments						
Total Accomplishments through FY 2024-25 (viii)	84	82	78	57	14	23

State % Final (Cumulative / Baseline)	98%	95%	91%	66%	16%	27%
Goal		95%	95%	95%		32%

- (i) The universe of current Corrective Action facilities is 86. New facilities are added upon discovery.
- (ii) The event by which the RFA is completed.
- (iii) The event by which the State verifies that the current human exposures are under control.
- (iv) The event by which the State verifies that the migration of contaminated groundwater is under control.
- (v) Remedy construction may also acknowledge the event where no remedy is constructed and/or where final remedy construction has been deferred in specified operating areas at the facility as long as certain criteria are met. The event when the State acknowledges in writing that the RCRA facility has completed construction of a facility's remedy that was designed to achieve long-term protection of human health and the environment and that the remedy is fully functional as designed, whether or not final cleanup levels or other requirements have been achieved.
- (vi) This code is not equivalent to a no further action decision or final cleanup of a facility. The event by which the State makes an RAU determination and completes an RAU form. The RAU milestone is achieved when a piece of property can be safely used for an anticipated use and, depending upon the anticipated future use, may not require a facility-wide construction complete determination.
- (vii) CA900 - This event indicates remedies selected for the protection of human health and the environment standard have been fully implemented and associated performance standards have been attained at the entire facility or specific areas within the facility. CA999 - This event indicates the completion of the corrective action process for the entire facility or for areas at the facility; that active remedial measures as specified in the RCRA permit or enforcement order are completed, and that all obligations with respect to compliance with 40 CFR Part 264.101 or equivalent State requirements with respect to known Solid Waste Management Units (SWMUs) or Areas of Concern have been met.
- (viii) Since the beginning of the program.

d. Strategy to achieve the goals listed above:

The Facility Management Branch (FMB) evaluates and projects RCRA Corrective Action goals multiple times per year: during the EPA Work Plan development stage, at the EPA End-of-Year Reporting stage, at each review, and during the regular supervisor/employee meetings. Facilities that have not met the Human Exposures Controlled and Groundwater Contamination Controlled projections have been evaluated and have been notified concerning information needed to meet the goals, including the newly permitted facilities.

The Remedy Constructed (CA550) indicator is very dependent on the facility, not necessarily the Hazardous Waste Project Manager. The facility team needs to have conducted a sufficient job assessing the contamination before they can propose and implement what could be considered a final remedy. Fully assessing groundwater contamination and remediating groundwater contamination is not an easy or inexpensive task. The Remedy Constructed indicator requires extensive discussions between the FMB and subject facilities to identify and approve remedies that are protective of human health and the environment and meet the appropriate environmental media standards. The selection of the proper remedy and implementation of the remedy may require a large investment of time and money at each facility. For the FMB to meet the goal of 95 percent, no more than four facilities can miss the goal. EPA is aware that it is unlikely that the FMB will meet the 95 percent Remedy Constructed goal. However, the FMB continues working to meet these goals.

The FMB continues to evaluate facilities that appear to have the necessary elements required for the Ready for Anticipated Use (RAU CA800). Once evaluated and a positive RAU CA800 is determined, the proper forms will be completed.

To meet the All RCRA Remediation Complete goal, a facility must meet the appropriate clean-up standards for all environmental: soil, groundwater, surface water, and air. Typically, groundwater cleanup is a multi-decade process, depending on the constituents and concentrations that need to be remediated. However, the Risk-Based Remediation of Industrial Sites legislation enacted through S.L. 2011-186 and revised by S.L. 2015-286 allows for a risk-based approach to the soil, groundwater, and air standards if the remedy still provides for the protection of human health and the environment.

2. Compliance and Enforcement

The Hazardous Waste Section is responsible for implementing inspection, compliance, and enforcement activities. The environmental benefits achieved through compliance and enforcement activities are identified each year to measure the overall success of the program in meeting environmental goals. During FY 2024-25, the Hazardous Waste Section's actions ensured the safe management of an estimated 61,325 gallons and 686,592 pounds of hazardous waste, 8,749 gallons and 236,913 pounds of non-hazardous waste, and 155 pounds of universal waste, which otherwise may have been mismanaged. These actions also ensured the protection of staff at affected facilities, emergency responders, nearby residents, and environmental receptors who could have been adversely affected by mismanaged waste.

3. Information Management

Comprehensive information about North Carolina's hazardous waste facilities is entered and stored in the national hazardous waste database known as Resource Conservation and Recovery Act Information (RCRAInfo). This system gives EPA and State hazardous waste staff access to hazardous waste facility, e-manifest, inspection, enforcement, permitting, corrective action, and Biennial Report information. The RCRAInfo database was developed by and is managed by the EPA. The State's data is entered into the database and maintained by Hazardous Waste Section staff. RCRAInfo contains comprehensive information on facilities that generate and/or manage hazardous waste in the State as well as all the Hazardous Waste Section's activities affecting these facilities. To view RCRAInfo, visit <https://enviro.epa.gov/envirofacts/rcrainfo/search>. To view environmental information for specific hazardous waste sites in North Carolina, visit <https://enviro.epa.gov/>. To view biennial report information, visit <https://enviro.epa.gov/envirofacts/br/search>. For details about the DEQ DWM and its Hazardous Waste Section, visit DWM's website: <https://deq.nc.gov/about/divisions/waste-management>, or the Section's website: <https://www.deq.nc.gov/about/divisions/waste-management/hazardous-waste-section>.

4. Hazardous Waste Program Development

The Hazardous Waste Program will continue to ensure safe hazardous waste management in North Carolina by:

- Supporting opportunities for waste minimization, including source reduction and recycling, as well as supporting annual generator workshops that educate hazardous

waste generators about hazardous waste regulations to help these generators achieve and maintain compliance.

- Maintaining a variety of easily accessible online guidance documents to educate all generators about hazardous waste regulations that help them achieve and maintain compliance. Visit the Hazardous Waste Section's Guidance Documents website: <https://www.deq.nc.gov/about/divisions/waste-management/hazardous-waste-section/technical-assistance-and-guidance-documents>.
- Continuing to seek EPA authorization to maintain the Hazardous Waste Section's authority to implement the federal program.
- Maintaining high-quality hazardous waste data for hazardous waste trend analysis and sound decision-making. Utilizing the EPA's RCRA Integrated Targeted Assistant (RITA) online dashboard that incorporates the Hazardous Waste Section's data to identify potential at-risk facilities, under reporters, and non-notifiers.
- Participating in the EPA rulemaking process. State authorization is a rulemaking process that EPA delegates the primary responsibility of implementing the RCRA hazardous waste program to individual states in lieu of EPA. This process ensures national consistency and minimum standards while providing flexibility to states in implementing rules. On November 4, 2024, the Final Authorization of the North Carolina State Hazardous Waste Management Program Revisions was printed in the Federal Register (89 FR 87512; November 4, 2024) and can be found at this link: <https://www.govinfo.gov/content/pkg/FR-2024-11-04/pdf/2024-25602.pdf>. North Carolina continues to have primary enforcement authority and responsibility for its State hazardous waste program.

5. Hazardous Waste Reduction Initiatives

The Hazardous Waste Section promotes waste minimization, including source reduction and recycling in all its programs. Some of these activities include:

- Incorporating pollution prevention and sustainable materials management training into annual generator workshops, industry meetings, and enforcement settlement negotiations.
- Reviewing facility requests for alternative management practices for hazardous waste (use/reuse, reclamation, substitution, reclassification, and delisting).
- Ensuring that generators continue to develop programs to minimize or reduce the volume and quantity or toxicity of hazardous waste when staff conduct compliance assistance visits and during facility inspections.

6. Cost of Hazardous Waste Management Program

Table III-2. Hazardous Waste Legislative Financials – July 1, 2024 to June 30, 2025

Category	Receipts	Appropriations	Federal	TOTALS
Salary and Fringe	\$2,408,428.12	\$0.00	\$2,249,683.43	\$4,658,111.55
Purchased Services	\$81,846.99	\$0.00	\$385,430.96	\$467,277.95
Supplies	\$227.95	\$0.00	\$6,318.70	\$6,546.65
Property Plant and Equipment	\$0.00	\$0.00	\$2,268.76	\$2,268.76
Other Expenses and Adjustments	\$28,475.00	\$0.00	\$203,956.62	\$232,431.62
Intragovernmental Transfers	\$0.00	\$0.00	\$0.00	\$0.00
TOTALS	\$2,518,978.06	\$0.00	\$2,847,658.47	\$5,366,636.53

C. Resident Inspector Program

1. Executive Summary

The Resident Inspector Program, effective since January 1, 1991, has been operating for more than 34 years and is administered by the DWM's Hazardous Waste Section. The program uses a multimedia approach during required regulatory inspections involving hazardous waste management and treatment requirements, workplace safety, air emissions requirements, wastewater treatment and discharge requirements. Resident inspectors also evaluate commercial hazardous waste facilities for potential violations in other regulatory areas, such as the N.C. Department of Labor's Occupational Safety and Health Act and the N.C. Department of Transportation's hazardous materials transportation regulations. The program inspected the State's nine permitted commercial hazardous waste treatment, storage, and disposal facilities during this period.

For FY 2024-25, the Resident Inspector Program operated with a staff of five (5) positions paid from the commercial hazardous waste facility fees. The program's operating fee-based budget collected \$411,301.99 and program expenses totaled \$ 533,836.03. \$122,534.04 was reimbursed from HW Fee Funds to cover operating costs exceeding revenue. Program staff conducted 408 multi-media inspections with two (2) notices of violation.

2. Program Description

The Resident Inspector Program was established "... to enhance the ability of the department to protect public health and the environment by providing the department with the authority and resources necessary to maintain a rigorous inspection and enforcement program at commercial hazardous waste facilities" (G.S. 130A-295.02(f)). The program monitors all aspects of commercial hazardous waste facilities in North Carolina, provides facility support through assistance and education, assures compliance with laws and rules administered by DEQ, and may include enforcement of laws or rules administered by any other State agency through a memorandum of agreement.

The Resident Inspector Program is part of the Hazardous Waste Section's Compliance Branch. For FY 2024-25, the program was comprised of three resident inspector positions, one administrative assistant, and one (half-time) program supervisor.

During FY 2024-25, Resident Inspector Program staff conducted 408 multimedia inspections at North Carolina's nine commercial hazardous waste treatment and storage and disposal facilities. This performance met the statute-mandated minimum of 408 inspections. (See Table III-3.)

3. Program Funding

The Resident Inspector Program is intended to be funded solely by fees collected from commercial hazardous waste facilities (G.S. 130A-295.02(h)). These fees are based on each facility's category ranking and the volume (tons) of hazardous waste received. For FY 2024-25, facility ranking fees totaled \$271,728 and tonnage fees (\$4.50 per ton) equaled \$140,865.80. (See Table III-3.) The program's expenses totaled \$533,836.03.

4. Program Results

Resident inspectors offer compliance assistance routinely – often in the form of education, technical assistance, and recommendations or comments during the site visits. Since the inspectors visit these facilities at least twice a month, they become familiar with facility management, operations, and site conditions. Inspection rates are based on facility ranking, which is based on the facility's size, what type of treatment they do, what type of waste they manage and how much, their enforcement history, their locations, and what reclamation activities they may conduct.

Resident inspectors visit these sites two (2) to six (6) times per month, depending on the facility's ranking. Resident inspectors can easily identify potential problem areas and work with the facility toward a permanent solution. If a facility begins to have operational or compliance problems, the inspector reviews these problem areas during each visit to provide assistance and keep the facility's compliance awareness high. Inspectors communicate frequently with facility management and front-line workers to address conditions or behaviors before they become a compliance issue.

The inspectors also communicate to clarify permit conditions and current regulatory requirements and explain the reasons for the requirements as well as the potential risks and costs of

noncompliance. During the past fiscal year, resident inspectors issued two (2) notices of violation. (See Table III-3.)

The Resident Inspector Program staff members continue to provide rigorous oversight of commercial hazardous waste facilities across the State. Staff constantly seek new approaches and initiatives to ensure that commercial hazardous waste facilities can protect public health and the environment. The Resident Inspector Program staff has also worked with the commercial facilities to maintain compliance during times of economic challenge. Economic pressures can cause hazardous waste facilities to operate with fewer staff members and provide employees with less training. All these factors can lead to non-compliance. The Resident Inspector Program continues to work toward a high level of compliance at the commercial hazardous waste facilities in North Carolina through facility education, technical assistance, and regulatory oversight activities.

**Table III-3. Resident Inspector Program Commercial Hazardous Waste Facilities' Data
FY 2024-25**

Commercial/ Treatment/ Storage/ Disposal Facility	Facility Ranking	Minimum Number of Inspections	Actual Number of Inspections Conducted	HW Tons Received FY2023-24	HW Tons Received FY 2024-25	Notices of Deficiency Issued	Notices of Violation Issued	Compliance Orders Issued

D. Mercury Switch Removal Program

1. Executive Summary

The Mercury Switch Removal Program (MSR Program) has been operating for 20 years and is administered by DWM's Hazardous Waste Section. The program continues to inspect the end-of-life vehicle dismantling, crushing, and shredding facilities. For FY 2024-25, the Mercury Switch Removal Program operated with a staff equivalent to approximately five (5) positions supplied by the Hazardous Waste Section's Compliance Branch. The program's operating budget is funded by fees collected as part of the N.C. Department of Transportation's application for a certificate of vehicle title fee.

The program's total operating costs in FY 2024-25 were \$499,416.49. Those costs include switch reimbursements of \$5 for every mercury switch removed and recycled or disposed of as RCRA "Universal Waste." A total of \$13,050 was disbursed to the dismantlers, crushers, and shredders for mercury switch reimbursements. Program staff conducted 33 inspections during FY 2024-25 to determine compliance with State and federal RCRA regulations. No notices were issued.

2. Program Description

Through S.L. 2005-384, as amended by S.L. 2007-142, the General Assembly acted to reduce the amount of mercury entering the State's environment. As stated in G.S. 130A-310.51, the purpose of the program is to reduce the quantity of mercury released into the environment by removing mercury switches from end-of-life vehicles and creating a removal, collection, and recovery program for those switches. The mercury switches control convenience lighting in the trunk and under the hood. Specifically, the law requires all vehicle dismantlers, vehicle recyclers, vehicle crushers and/or vehicle scrap processors to remove, collect and recover mercury switches contained in end-of-life vehicles prior to crushing, shredding, or smelting the vehicles.

To ensure compliance with requirements established in G.S. 130A-310.50 through 310.55, DEQ's DWM's Hazardous Waste Section created the MSR Program, which is coordinated through the Section's Compliance Branch.

During FY 2024-25, the MSR Program inspectors conducted 33 inspections in North Carolina. The site visits are used to evaluate whether the facility is subject to the law and inform those regulated facility operators with the legislative requirements. Additional compliance assistance was provided by the inspectors, as needed, regarding the MSR Program and other RCRA and Clean Water Act regulated requirements.

In accordance with the National Vehicle Mercury Switch Removal Program (NVMSRP), North Carolina's MSR Program receives support from a corporation, End-of-Life Vehicle Solutions (ELVS), which was formed by and represents the major automobile manufacturers. ELVS provides the following support to North Carolina's vehicle dismantlers/recyclers, vehicle crushers, and scrap processing facilities:

- Educational materials regarding mercury switch removal, guidance on which vehicles contain mercury switches, and instructions on how to locate, identify, and remove mercury switches;

- U.S. Department of Transportation (DOT) appropriate storage/shipping containers, including applicable labeling and shipping documents necessary for the shipment of the mercury switches;
- Transportation of the mercury switches in a timely fashion to an RCRA-permitted mercury recycling/disposal facility;
- Recycling of the mercury switches by a qualified mercury retort facility or, when recycling is not feasible, for the proper disposal of the mercury switches at an RCRA-permitted disposal facility; and
- Indemnification from liability for participating vehicle dismantlers, scrap processing facilities, vehicle crushers, and others once mercury switches are collected by the ELVS contractor.

With this level of support from automobile manufacturers, dismantlers/recyclers, vehicle crushers, and scrap processing facilities can effectively remove the mercury switches from end-of-life vehicles before crushing, shredding, or smelting them.

When the switches are removed from the vehicles, they are placed in the supplied DOT container, which is labeled with the date the first switch is placed in the container and with the words "Universal Waste – Mercury-Containing Equipment." When the container is full, with a maximum of 454 switches per container, or the date on the container approaches one year, the container is shipped to the ELVS-contracted receiving facility (shipping is paid for by ELVS). ELVS continues to provide new containers and supplies as needed.

3. Program Funding

The MSR Program is funded by fees collected as part of the DOT fee for the application of a vehicle title certificate. Twenty cents of each \$40-per-vehicle certificate of title fee is now allocated to DWM for this program. (Formerly, fifty cents of each fee went to the now-defunct Mercury Pollution Prevention Trust Fund). Under G.S. 130A-310.54(b)(1) and (b1), the Mercury Pollution Prevention Fund, in part, reimburses the MSR Program with \$5 for each mercury switch removed and properly recycled or disposed of via the NVMSRP, paid to a vehicle crusher, vehicle dismantler, vehicle recycler, or scrap vehicle processing facility; and costs incurred by DEQ to administer the program.

Operationally, the funding provided approximately five (5) full-time equivalent positions, travel, and equipment expenses plus mercury switch removal reimbursement payments. Program duties are, on a part-time basis, spread among these staff and others, including a Hydrogeologist and Supervisor. FY 2024-25 revenues were approximately \$ 480,908.80. Reimbursement paid to the vehicle dismantlers/recyclers, vehicle crushers, or scrap processing facilities, for removal of the mercury switches with proper recovery and disposal (\$5 per switch) totaled \$13,050 and total administrative costs totaled \$ 486,366.49. The fund balance did not see a net increase due to changes in legislation for the fiscal year.

4. Program Results

As directed by ELVS, the contracted facility receiving the collected mercury switches supplies data to the MSR Program detailing the number of switches received, the date the switches were

received, and the name and location of the facility that shipped the switches (dismantler, crusher, shredder, etc.).

For FY 2024-25, 2,610 mercury switches were removed from vehicles and received by the ELVS contractor from North Carolina vehicle dismantlers/recyclers, vehicle crushers, and scrap processing facilities. This waste is managed as a universal waste. A total of 5.7 pounds of mercury (from the 2,610 switches) was prevented from being released into the environment in North Carolina because of mercury switches being removed from vehicles this year.

Table III-4. Mercury Switch Removal Program Summary of Data 2012-2024

Calendar Year	Switches Collected	Pounds Collected	North Carolina National Rank
2025	2,610	5.7	NA
2024	3,020	6.64	NA

TOTALS (2006-25)	525,590	1,157.04	

In the 20 years this program has been in place, a total of 1,157.04 pounds of mercury has been prevented from being released into North Carolina's environment from metal processing and

smelting of scrap vehicles. North Carolina's national rank is calculated based on the mercury recovery performance ratio. This is calculated by dividing the number of mercury switches received by the ELVS Federal program contractor from North Carolina for the fiscal year, by the number of mercury switches available for removal in North Carolina for that same period. The same calculations are made using the total national switch collection and availability, allowing ELVS to rank the state programs. ELVS ceased ranking states in 2020.

S.L. 2016-94 had established a sunset date for the Mercury Switch Program of June 30, 2017. The sunset date of the program has since been amended by S.L. 2017-57 and S.L. 2020-74 to be June 30, 2031. The law as amended also ended the transfer of funds into the Mercury Pollution Prevention Fund from the N.C. Highway Fund, removed most of the dollars from the fund and transferred all remaining funds to DWM on June 30, 2031. All activities of the program in North Carolina, including education, assistance, inspections, and switch reimbursements, will cease as of June 30, 2031.

Chapter IV: Inactive Hazardous Sites

A. Executive Summary

The General Assembly created the Inactive Hazardous Sites Program (IHSP) in the Division of Waste Management's Superfund Section to identify, investigate and clean up properties contaminated with hazardous substances, including old pre-regulatory landfill (PRLF) sites and federal sites. PRLF sites are defined as any land area where municipal solid waste was disposed of prior to January 1, 1983. They predate modern hazardous and solid waste landfill standards designed to prevent contamination and were not used for the disposal of industrial solid waste.

The Federal Remediation Branch (FRB) within the Superfund Section conducts site evaluations for existing release sites in the Inactive Hazardous Sites inventory. FRB also works with EPA and, when appropriate, the Department of Defense (DOD) to investigate, assess and remediate sites where uncontrolled and unregulated hazardous wastes have been or may be released into the environment. For a small percentage of evaluated sites that qualify to be listed on the National Priority List (NPL) or are determined to be of NPL caliber, the FRB provides both oversight and technical guidance to the EPA and DOD for site cleanup.

This report satisfies the requirements, set out in G.S. 130A-310.10, for an annual report to the General Assembly and includes activities on inactive hazardous sites, including pre-regulatory landfills and sites with federal involvement.

To date, a total of 3400 chemical spill or disposal sites and old, unlined dumps or landfills (pre-regulatory) have been cataloged in North Carolina. Of this number, 2637 still require work to address public health or environmental hazards. Of the 2637 remaining open cases, 650 are old, unlined landfills that predate solid and hazardous waste permitting laws.

Inactive Hazardous Sites in FY 2024-25:

Total Number of Inactive Hazardous Sites Cataloged		3400
	Chemical Spill or Disposal Sites	2712
	Pre-Regulatory Landfills	688
Total Number of Sites Requiring No Further Action		763
	Chemical Spill or Disposal Sites	725
	Pre-Regulatory Landfill Sites	38
Remaining Open Sites		2637
	Chemical Spill or Disposal Sites	1987
	Pre-Regulatory Landfills	650
Sites on the National Priorities List (NPL)		39
	NPL Sites with No Responsible Party	19
	NPL Sites Delisted	2

Inactive hazardous sites, pre-regulatory landfills (PRLFs) and federal facilities are managed in separate programs within the Division's Superfund Section, so their individual program activities are described below.

Inactive Hazardous Sites Program Activities During FY 2024-25:

Oversight of Responsible Party Cleanup Actions - Total		276
	Registered Environmental Consultant (REC)-Supervised Remedial Actions	105
	Staff-Supervised Remedial Actions under Administrative Agreements	61
	Additional Staff-Supervised Owner/Responsible Party Actions	79
	Spill Response Actions	31
Inactive Hazardous Sites Cleanup Fund Actions		
	Contaminated Site Assessments or Abatement Actions Completed or Ongoing	22
	Homes Provided with Alternate Water, Well Abandonment or Treatment System Maintenance	2
Testing Conducted by Staff		
	Water Supply Wells Sampled at Non-Landfill Sites	3
	Sites with Other Testing (soils, surface water)	1
New Site Screenings		
	Sites Screened	110
	Sites Added to Inventory	47
	Sites Reopened	2
Sites Evaluated for No Further Action (NFA) Status		
	Sites Evaluated	27
	NFAs Granted for Entire Site	22

Pre-Regulatory Landfill Program Activities During FY 2024-25:

Remedial Investigation Ongoing	52
Local Government Remedial Investigation Ongoing	8
Remedial Investigation Completed	3
Remedial Design Ongoing	42
Remedial Design Completed	2
Remedial Action Ongoing	5
Remedial Action Completed	2
No Further Action Issued	1
New Site Evaluations	1
Homes Provided Alternate Water or Treatment Systems Maintained	13
Number of Water Supply Wells Sampled	152

Federal Remediation Program Activities During FY 2024-25:

NPL, DOD, MGP, and Bankruptcy Sites with Investigation and Cleanup Oversight	111
Complete Five-Year-Review Reports for NPL Sites	4
Complete Site Evaluation Reports	8
Complete O&M Sampling and Reporting	8
Number of Water Sample Well Sampled and Filtration Systems Maintained	3

1. Program Funding**a). Inactive Hazardous Sites**

The Inactive Hazardous Sites Cleanup Fund (Fund) supports the development and implementation of a remedial action program focused on identifying and mitigating unacceptable risks to human health caused by the inactive hazardous substance or waste disposal sites with no responsible party. In January 2024, the Fund was appropriated with two years of additional funding at \$400k each year to allow an increase in the number of non-landfill sites addressed, including those discovered to be affected by the various emerging contaminants.

As of July 1, 2024, the beginning balance of the Fund was \$674,847.12. The \$800,000 appropriated funding for FY 24-25 was issued in three installments during the year. Fees of \$38,176 were received totaling \$838,176 in receipts. Funds expended during the fiscal year totaled \$524,894.44. The proposed cost of work already approved by June 30, 2025, but not yet invoiced, totals \$124,861. Additional obligated funds for laboratory and bottled water contracts total \$77,412. In addition, due to the prevalence of per-and polyfluoroalkyl substances (PFAS) contamination in private water supplies, the Bernard Allen Emergency Drinking Water Fund is rapidly being depleted in response to 2022 statute revision which mandates that PFAS contamination in private water supplies be assessed and mitigated for any resident with no qualifying income limit. Therefore, approximately \$380,000 of the Inactive Hazardous Sites Cleanup Fund is ear-marked for work funded by the Bernard Allen Emergency Drinking Water Fund to sample and provide alternate water when non-PFAS contamination is associated with a

site in the IHSP, so the remaining emergency drinking water funds can be dedicated to PFAS contaminated water supplies. Considering these funding obligations, the Cleanup Fund had an effective available cash balance of \$405,856 at the end of the fiscal year to address sites. Additional assessment and imminent hazard abatement work continues to be planned for the next fiscal year.

b). Pre-Regulatory Landfills

A portion of a solid waste disposal tax established by the legislature is dedicated toward contracting assessment and remediation at uncontrolled pre-regulatory landfills and to fund staff to implement the program. This fiscal year, \$12,708,761 was added to a beginning balance of \$23,895,810. Expenditure totaled \$14,492,755 yielding an end balance of \$22,111,817. Encumbrances not yet paid total \$16,305,694 leaving an end of fiscal year effective cash balance of \$5,806,123.

c). Federal and National Priority List Sites

NCDEQ provides a 10 percent cost share required for Superfund cleanups on the 19 National Priority List (NPL) sites having no viable responsible party to pay the operating and maintenance costs associated with these Superfund cleanups. As of June 30, 2025, the fund had \$4,396,349. The total amount obligated under contracts was \$3,047,442; and unobligated fund balance that is available for future O&M and SSCs was \$1,348,907. The amount of Federal cost share funds distributed in FY 2024-25 was \$411,461.

B. The Inactive Hazardous Sites Program

The Division of Waste Management's Inactive Hazardous Sites Branch implements the Inactive Hazardous Sites Response Act of 1987 (IHSRA) and is responsible for oversight and approval of the assessment and remediation of sites contaminated with hazardous substances.

1. The Inactive Hazardous Waste Sites Inventory and Priority List

The Inactive Hazardous Sites Inventory consists of five categories based mostly on a site's remedial action status. Newly discovered sites are added to the "Evaluation Pending" or "Non-hazardous substance site" categories. As staff resources are available, the sites are ranked based on the threat to public health and the environment as required by G.S. 130A-310.2. Ranking procedures are prescribed in 15A NCAC 13C .0200. Once ranked, sites are transferred to the "Sites Priority List" (SPL) Category. Appendix C includes the priority list and the type of hazardous substances or waste known or believed to be located at each of these sites. The purpose of the SPL is to prioritize remedial actions at sites without responsible parties, providing sufficient funding is available. The rank or absence of a site on the priority list does not limit the division in conducting abatement actions at sites with newly discovered immediate hazards.

If a party volunteers to clean up a site and enters into an administrative agreement with the division, the site is then transferred to the "Voluntary Action" category. Once cleanup is complete, the site is transferred to one of the "No Further Action" (NFA) categories.

To date, the program has cataloged 2712 chemical spill sites. A total of 47 new chemical spill sites were added to the inventory of sites in FY 2024-25 (Table IV-1). Two chemical spill sites

were reopened based on additional evidence of contamination. A total of 725 sites has work completed to date and are assigned “No Further Action” status. Of those, 22 completed remedial actions and were assigned “No Further Action” status in FY 2024-25 (Table IV-2).

G.S. 130A-310.10 requires reporting of the location of each inactive hazardous waste disposal site. Appendix D lists all the inactive hazardous sites by County. Due to the large numbers of contaminated sites, most of the sites have not undergone the assessments needed to provide complete information.

2. Sites Using the Inactive Hazardous Sites Cleanup Fund

Funds are used on higher risk chemical spill sites that have no identified or potential financially viable responsible party available to pay for contaminant testing and cleanup. These cases are referred to as “orphan” sites, which amount to almost half of the open cases in the inventory, with many new ones reported to the division each year. The Inactive Hazardous Waste Sites Priority List helps determine priorities for cleanup.

Determining whether a potential responsible party exists most often requires research, inquiry, and sampling, because it is difficult to prove who caused the contaminant releases at these sites. Once a responsible party is identified, they are encouraged to voluntarily clean up their sites. However, when they are no longer in business, financially unsound, or do not comply with a request and subsequent order to clean up a site, state funds have historically been used to perform the cleanup using the Fund. The demand for state funds to conduct site cleanups depends on two factors: (1) how often responsible parties refuse to comply with orders to conduct cleanup and (2) the risks associated with orphan sites that lack financially viable responsible parties.

A high percentage of these “orphan” sites have been identified as higher risk because they are either used for residential purposes, have contaminated water supply wells, have a drinking water source within one-quarter mile of the site, or have the potential for indoor air concerns associated with volatile subsurface contamination. The Fund is used to: (1) address these imminent hazard sites; (2) pay for assessment and cleanup when responsible parties do not comply with orders to clean up sites; (3) pay for assessment and cleanup of orphan sites; (4) pay for preparation of a Notice of Environmental Contamination if the owner does not comply with orders to record a notice; and (5) provide alternate water in response to private well contamination. When a financially viable responsible party exists, the state must attempt to recover its expenditure from the party responsible.

The Inactive Hazardous Sites Cleanup Fund was used on 26 sites this year (Table IV-3). Most of the work is focused on protection of human health from either contaminated water supplies or assessment of vapor intrusion into occupied structures. Work also consists of assessing the extent of groundwater contamination on neighboring properties and updating groundwater conditions to ensure continued protection of public health.

Table IV-3. Inactive Hazardous Sites Cleanup Fund Expenditures for Sites with no Responsible Party during FY2024-25

Site Name	County	Activity	Fund Expenditures*
AC Delco Building	Forsyth	Vapor intrusion evaluation on a neighboring property.	\$4,266.06
Allen Lane Contaminated Wells	Orange	Maintenance of treatment system installed on contaminated residential well.	\$2,981.87
AOPC 10 Camp Lejeune Alternate	Onslow	Groundwater assessment and vapor intrusion evaluation.	\$42,303.12

Wiscassett Mills	Stanly	Groundwater assessment and vapor intrusion evaluation.	\$3,743.00
Yadkin Rd Circle K	Cumberland	Vapor intrusion evaluation onsite and on a neighboring property.	\$15,937.88

3. Responsible Party Voluntary Site Remedial Action

When the Inactive Hazardous Sites Branch requests that a person responsible for contamination at a priority site take action to address the risks, some parties agree to voluntarily conduct a cleanup. Some responsible parties and owners also initiate an approved assessment and/or remedial action on their own. Due to the number of voluntary remediation projects and limited staff resources, the General Assembly authorized the division to privatize oversight of voluntary remediation activities at lower-risk sites. The division continues to provide oversight for assessment and remediation at sites that present more severe public health threats or other concerns.

The privatized portion of the voluntary cleanup program is called the Registered Environmental Consultant (REC) Program. Under this program, a responsible party hires a private consultant approved by the division to conduct the site assessment and cleanup and to certify that those activities comply with regulations. The REC's certification replaces division oversight of the assessment and cleanup. Firms must meet certain requirements to qualify as an REC. Division staff conduct REC certification, training and performance audits each year to ensure program integrity. The division has the authority to disqualify and/or sanction an REC where necessary. These staff are funded through fees collected from the voluntary program participants.

A current list of the 166 sites where assessments and cleanups are underway in accordance with an administrative agreement with the state is provided in Table IV-4. There are 105 REC-directed and 61 division-directed actions. Table IV-5 is a list of an additional 79 division-directed responsible party assessment and cleanup actions pending administrative agreements.

Inactive Hazardous Sites Branch staff are conducting work at many other sites in addition to the remediating party oversight of work conducted at the sites shown in Tables IV-4 and IV-5. Such work includes (1) assessing and abating risk from contaminated drinking water wells and indoor air where there are no identifiable responsible parties, (2) investigating responsible parties at higher priority sites, (3) preparing bankruptcy claims and overseeing contractor work conducted with receipts, (4) responding to requests for “No Further Action Status” reviews, (5) responding to spills, (6) screening of newly discovered sites and (7) responding to public inquiries on sites.

4. Imminent Hazard Sites

The division and the EPA are committed to addressing imminent hazard sites when identified. Table IV-6 provides a list of 55 sites, including some of the sites listed in Table IV-3, where potential imminent hazards were reported, assessed, or where abatement activities continued in FY 2024-25. Their location, a site description, action taken and funding source are provided.

Table IV-6. Summary of Action Taken at Imminent Hazard Sites in FY2024-25

Site Name	City/County	Site Description	Action Taken	Funding
28th Street TCE Contamination	Winston-Salem/ Forsyth	Chlorinated solvents in groundwater have migrated to a residential neighborhood from potentially multiple upgradient sources.	Vapor intrusion conducted in residential area. No exceedances of Vapor Intrusion Screening levels. Additional VI work may be conducted	DWM
AC Delco Building	Winston-Salem	High PCE in sub slab soil gas and groundwater from an unknown source.	A vapor intrusion evaluation was conducted for an offsite building. No unacceptable risk was identified through soil gas testing, so no indoor air testing is warranted.	DWM
Andrex Industries	Asheville	High PCE going into a creek which flows into a park. Source of PCE unknown	Onsite site remediation through injection of milk	Property owner
AOPC 10 Camp Lejeune Alternate	Jacksonville/ Onslow	Chlorinated solvent contamination from unknown source in groundwater samples collected in right-of-way.	Groundwater samples collected in adjacent shopping center at a former dry-cleaning business. Source identified and future site work proceeding under DSCA Program.	DWM
Arrow Laundry	Mecklenburg	Dry cleaner with high PCE detection in groundwater.	Offsite soil gas assessment.	DWM
Battle Bridge Apartments, LLC	Raleigh/Wake	IHSB received data showing metals concentrations in soil at an undeveloped property with multiple soil piles and a shooting range berm. The initial investigation was conducted as part of a property transaction that was on hold until	The contaminated soil pile was excavated, and confirmation groundwater and soil sampling was conducted. Data indicated the site was no longer contaminated and would not be added to IHSB inventory.	Responsible Party

		the contamination was addressed.		
Benfield Chemicals	Canton/ Haywood Co.	Former chemical repackaging facility. Low-level pesticides and VOCs were detected at the site.	Assessment of soil, soil gas and groundwater was completed. No imminent hazards were noted so no further work is planned.	DWM
Brekenwood Subdivision	Guilford	Several private wells in the area are contaminated with no known source.	Three private wells were sampled, and two point-of-entry treatment systems were maintained.	DWM
Carolina Tire #2936	Asheville/ Buncombe	Chlorinated solvents in groundwater reported in 2006, are now believed to be from an off-site source. The off-site property owner was issued a Request for Information in March 2024 with no response.	The onsite owner has located and sampled the groundwater monitoring wells and is continuing with a vapor intrusion evaluation to understand potential risk to onsite workers.	Responsible Party

Chapel Hill Community Center Park	Chapel Hill/Orange	The site was formerly a wastewater treatment plant and is now a public park. At some point during its history, municipal refuse was placed on the property on a temporary basis.	The Town investigated and identified soil contaminated with metals. The contaminated area has subsequently been fenced off to restrict public access. At the recommendation of the IHSB, additional soil and groundwater sampling is planned for FY 2025-26 to address the contamination.	Responsible Party
Christian Creek Rd PCE	Swannanoa/Buncombe	Chlorinated solvents had been detected in several private water supply wells, and they were under triannual monitoring. The source of contamination is currently unknown. An additional homeowner requested that their supply well also be sampled.	Seven private supply wells in the neighborhood were sampled. No solvents were detected. All of the water supply wells sampled to date in the area will be included in the triannual monitoring using the Bernard Allen Fund.	DWM
Cinderella Knitting Mills	Kings Mountain/Cleveland	The former textile mill has a significant groundwater PCE plume that flows beneath a city park and discharges to a stream that is accessible by the public. PCE concentrations in the stream pose an unacceptable risk to recreators so the City posted warning signs. In addition, the EPA installed a passive vapor mitigation system in the onsite building in 2017 to reduce PCE levels in the indoor air. Indoor	Annual indoor air and groundwater sampling was conducted. Levels on contaminants in all media are consistent.	DWM

		air is routinely monitored by IHSB due to its elevated risk to onsite workers and the public.		
Clarkson Street Site	Charlotte/Mecklenburg	TCE in groundwater from an unknown source created a vapor intrusion risk in a downgradient condominium. EPA installed a sub-slab depressurization system in 2021 to mitigate the vapor intrusion. In 2023 the system blower was replaced.	IHSB worked with the Homeowners Association and their contractor to replace the blower and confirm indoor air quality. TCE was not detected in any of the indoor air samples collected, and the mitigation system was demonstrated to be effective. Sampling/monitoring recommendations were provided to the HOA.	DWM and Property Owner
Corbin St. PCE	Jacksonville/Onslow	PCE was discovered in groundwater at gas station during UST investigation. Source unknown and apartments and daycare located adjacent to site.	Access to site was obtained to sample soil gas and groundwater.	DWM (Pending)
Danny Roberts/ Interstate BP	Durham/ Durham	Groundwater has historic solvent contamination with elevated TCE. Vapor intrusion in neighboring residences was a concern.	Multiple access attempts made to perform a vapor intrusion evaluation at a neighboring residence, permission not received access attempts will continue.	DWM

Dude Inc.	Conover/ Catawba	TCE in groundwater is migrating toward an offsite structure. The source may be associated with a sewer and/or a documented upgradient property.	The DWM Federal Remediation Branch conducted a vapor intrusion evaluation of the structure, and soil gas data did not indicate an unacceptable vapor intrusion risk. No additional work planned.	USEPA
Eakes Cleaners (Former)	Durham/ Durham	Groundwater contamination detected at building near former dry cleaner. PCE & TCE detected in indoor air at concentrations exceeding screening levels.	Property owner performed additional sampling and installed vapor mitigation system.	Responsible Party
Gaither Transou	Jamestown/ Guilford	Groundwater is contaminated with chlorinated solvents and PFAS due to past acceptance of industrial septic tank waste from various sources.	Groundwater and soil gas sampling was conducted at the source property, and downgradient residential wells were tested for chlorinated solvents and PFAS compounds.	DWM

Geltman Corporation	Conover/ Catawba	TCE in groundwater posed a vapor intrusion risk to onsite workers in 2022. IHSB oversaw the property owner's design and installation of a sub-slab depressurization system in early 2023. Plans were needed for operation and maintenance of the mitigation system and to ensure future owners of the property were knowledgeable of the indoor air risks.	Work continued at this site to approve the O&M document for the vapor mitigation system and develop the land-use restriction document for recordation on the property deed to ensure documentation of risks to future occupiers of the property. Recent monitoring well sampling indicated PFAS was detected in groundwater. PFAS was included in the groundwater sampling due to historical use at the facility. On going groundwater sampling is planned.	DWM and Responsible Party
Gemseal Pavement Products	Greensboro/Guilford	Coal Tar spill migrated to offsite drainage ditch	Coal tar contamination in ditch was confirmed to be removed.	Responsible Party
Gibbs Electroplating	Charlotte/ Mecklenburg	Groundwater is known to be impacted with PCE, TCE, and other contaminants. A neighboring property was found to have indoor air TCE concentrations exceeding NCDEQ action levels. Mitigation measures were successfully put in place, and the source property and additional surrounding properties needed evaluation for vapor intrusion risk.	Groundwater, soil gas, and indoor air data were collected from the source property and several nearby properties for indoor air risk determination. No immediate risk was determined.	DWM

Hamptonville Lubricant Release	Hamptonville, Yadkin	30 gallons of hydrocarbon/naphtha Lubricant released to ground	All contaminated soil was confirmed to be removed.	Responsible Party
Hangar Road CLT Airport AFFF Release	Charlotte/ Mecklenburg	Approximately 200 gallons of PFAS- containing aqueous film-forming foam (AFFF) was released to soil when a buried pipe failed.	Impacted soils were excavated and properly disposed of, and all AFFF piping was repaired and successfully tested. No further action is warranted.	Responsible Party
Hardy Gulf	Cameron/ Moore	Chlorinated solvents discovered in groundwater during UST investigation at concentrations exceeding vapor intrusion screening levels	Soil gas sampling performed, and results show vapor intrusion not an issue. Site considered low risk and no further action planned.	DWM
Hickory Coating Road Release	Hickory, Catawba	A 55-gallon drum of water-soluble coating fell off truck	RP cleaned up release immediately	Responsible Party
Hoopers Creek Road VOCs	Fletcher/ Henderson	In 2022, chlorinated solvents were detected in newly installed private water supply well, from an unknown source. Additional water supply wells were identified in the vicinity.	Twelve private wells were sampled and found to have no detectable contamination. The residence with solvents in their well was connected to city water. Area may be sampled by the Bernard Allen Program in the future.	DWM
Industrial Drive TCE	Wendell/ Wake	A report prepared for the UST Section indicated that TCE was detected in a monitoring well located near an occupied building with a potential vapor intrusion risk.	Indoor air testing detected contaminants, so a mitigation system was installed. Indoor air testing and adjustments to the vapor mitigation system is continuing.	Responsible Party

Kidde Fenwal PFAS	Wake Forest/ Wake	The site was formerly used to manufacture fire suppressant materials, PFAS compounds were discovered in groundwater during a Brownfields Site eligibility investigation.	IHSB conducted surface water and sediment sampling in Smith Creek located on the boundary of the Site. PFAS compounds were found in Smith Creek and the municipality was notified. No further action planned.	DWM
Morgan Mills	Albemarle/ Stanly	A former textile mill has significant PCE levels in soil, soil gas, indoor air, groundwater, surface water, and sediment from a former basement dry cleaning operation. Temporary active remediation consisted of a production well in operation until 2009 and soil vapor extraction systems. A past vapor intrusion evaluation of the neighboring residential community did not indicate unacceptable indoor air risk at that time.	IHSB continued to monitor groundwater, surface water and the potential for offsite vapor intrusion. A recent purchaser of the property has applied for a Brownfields agreement for redevelopment. Neighboring properties will continue to be considered for future monitoring.	DWM
N Caldwell Street PCE	Transylvania	Dry cleaner with high PCE levels in groundwater.	A groundwater investigation was conducted onsite and offsite. The site was referred to the DWM DSCA program.	DWM
Nissen Wagon Works	Winston-Salem/ Forsyth	Chlorinated solvents were detected in groundwater during a site assessment conducted for a Brownfield application. The source of solvents is unknown.	IHSB investigated potential vapor intrusion into an onsite building. Soil gas data did not indicate unacceptable risk. No additional risks	DWM (Pending)

			are indicated by current site data.	
Norfolk Southern Plasticizer Tank Car Release	Charlotte, Mecklenburg	Large release of plasticizer on ground from vandalized rail car. Mostly solid material.	RP cleaned up release immediately.	Responsible Party
O'Shields Fly Ash	Pisgah Forest/ Transylvania	Boiler fly ash was permitted as fill in a residential property's ravine in 1977 as a beneficial use. A water supply well is adjacent to the material. Landfill closure information could not be located in the files.	The private water supply well was sampled and analytes detected met acceptable health risk determinations.	DWM
Old Mount Holly Road PCE	Charlotte	PCE was documented in soil and groundwater.	Site sent to the DWM Federal Remediation Branch. Bernard Allen is also sampling several WSWs.	DWM
Patches Body Shop	High Point/ Guilford	Some contamination at the subject site was thought to originate from an upgradient, abandoned property, but the Remediating Party could not obtain permission from the owner to assess the property.	IHSB performed sampling and determined that a portion of the contamination originates from the upgradient property. This source property was proceeding towards foreclosure, so IHSB notified the County of the contamination. Work completed; no further action planned.	DWM
Patterson Ave. Solvents	Winston-Salem/ Forsyth	The site was a former fueling station with low-level solvents and lead in groundwater.	Access agreements were sent to subject property and surrounding residents to initiate a soil gas investigation to evaluate vapor intrusion risk. Access not yet granted	DWM (Pending)

Pender Plating	Burgaw/Pender	The site is a former chromium plating company with minimal assessment. EPA performed a soil cleanup in 2014, but current groundwater conditions are unknown.	IHSB installed additional monitoring wells, sampled soil and groundwater. No metals remain in groundwater above action levels, but PFAS related to metal finishing are present in groundwater.	DWM
Primrose Ave PCE Contamination	Mecklenburg	High PCE in groundwater from an unknown source.	Groundwater was sampled in a private water supply well. Results pending.	DWM
RD Pate Estate	Pikeville/ Wayne	Site is a former gas station with chlorinated solvent contamination in groundwater. Indoor air testing of an apartment building across the street indicated cumulative risk was acceptable at the time.	Indoor air confirmation testing was conducted at the apartment building to see if conditions have changed. Residential risk was confirmed to be acceptable.	DWM
Reeves Brothers	Rutherfordton/ Rutherford	In 2023 a fire occurred releasing toluene and MEK laden water at this legacy site with chlorinated solvents in groundwater. Released material entered a stormwater retention system, ditch, and off-site NC DOT retention ponds.	IHSB is working with the current owner to complete cleanup of the release in an off-site storm water ditch, and to locate historical groundwater wells and assess current groundwater conditions.	Responsible Party

Riverside Chemical	Ahoskie/ Hertford	Former pesticide storage & distribution facility with known contamination remaining after a removal action by the responsible party.	Sampling performed to confirm whether contamination remains. Results showed that metals and pesticides remain at concentrations above unrestricted use remedial goals but risk is acceptable for current site use. No further action planned.	DWM
Schulhofer Junkyard	Waynesville/ Haywood	As part of a NC DOT project, petroleum, metals, PCBs, dioxins/furans, were previously detected in soil at this current junk yard. The town was building a creek side public park and recreation center. The property owner was unresponsive to requests sent by IHSB.	IHSB was not granted permission to sample onsite media, so surface water and sediment samples were collected adjacent to the property and along the length of the junkyard, and proposed town park. No unacceptable risks to a recreator were associated with the results.	DWM
Skenes Avenue PCE	Henderson/ Vance	PCE detected in two potable wells. Treatment system was installed on one well and second well abandoned. Because the source is unknown, there is potential for vapor intrusion risk.	Soil gas and groundwater samples collected. No vapor intrusion issues, groundwater remains contaminated. No further work planned.	DWM
Southern Railroad station	Linwood/ Davidson	Small release of ammonium nitrate	RP cleaned up release immediately.	Responsible Party

Stoneville Furniture Company	Stoneville/ Rockingham	This former furniture manufacturing plant has a Brownfields Agreement. IHSB is responsible for assessing surrounding properties that may be impacted by off-site migration of chlorinated solvents in groundwater.	IHSB conducted an investigation of chlorinated solvents in groundwater and soil gas at multiple nearby properties, including an elementary school, a church and a municipal property. A tributary southwest of the Site was also sampled. Based on data, additional investigation of residential properties was determined to be needed. The IHSB issued access letters to perform this sampling, but no responses were received.	DWM
TChem	Winston-Salem, Forsyth	250-gallon release of an unknown chemical.	RP excavated contaminated soil and confirmed removal	Responsible Party
Texfi Industries, Inc/New Bern	New Bern/ Craven	Chlorinated solvents have undergone remedial action at the facility since the early 1990's. But Texfi declared bankruptcy and discontinued all activities in 2000. Environmental conditions warranted an update.	IHSB performed groundwater sampling of onsite wells in April 2024. Additional off-site sampling is planned.	DWM
VCP Wake Forest, LLC	Wake Forest/ Wake	High levels of TCE detected in soil gas and groundwater at vacant parcel planned for redevelopment as an apartment complex	IHSB required responsible party to perform additional sampling to determine source and extent of contamination. First phase of work completed but source and extent still undefined	Responsible Party

Vermeer All Roads	Charlotte/ Mecklenburg	Low-level chlorinated volatile organic compounds were detected in groundwater in 2020. The source of contamination appears to be from off-site.	The property owner is planning to perform a limited assessment to determine the source and to evaluate vapor intrusion for employee safety.	Property Owner
W Cumberland St PCE	Dunn/ Harnett	PCE was detected in groundwater on a former service station property and has migrated onto an adjacent property.	A groundwater assessment determined that the impacts are limited to the source property and one adjacent property. The property owner was issued a Notice of Regulatory Requirement to address the contamination.	DWM
Weaver Fertilizer Fire	Winston-Salem/ Forsyth	Historical operations at this facility included the blending and storage of fertilizers used in agriculture applications. On January 31, 2022, a fire occurred at the facility. Following the extinguishment of the fire, the IHSB was tasked with overseeing the assessment of the site.	IHSB continued remedial action oversight and approved a Remedial Investigation Report. Groundwater was found to be impacted by nutrients and metals. Soil contained primarily arsenic above background levels. However, no immediate receptor was at risk. Therefore, the site was referred to the REC program for further oversight.	Responsible Party

Williams and Gentry PCE	Yadkinville/ Yadkin	PCE from an unknown source was detected in groundwater at a gas station.	A vapor intrusion evaluation was conducted onsite and at nearby downgradient properties. There were no unacceptable risks associated with the soil gas results. The source of contamination remains unknown.	DWM
Wiscassett Mills	Albemarle/ Stanly	Large former textile mill had detections of PCE/TCE in groundwater at various locations on property. Source of contamination and potential risks were unknown.	Access to sample former mill property was declined by property owner. So, IHSB completed soil gas sampling on adjacent daycare, residential, and school properties. Results did not indicate unacceptable risk from vapor intrusion to offsite properties.	DWM
Worth Chemical (Brentagg)	Charlotte/ Mecklenburg	A former chemical manufacturing/mixing facility had multiple releases of various VOCs. PCE concentrations in groundwater had potential to pose a vapor intrusion risk to nearby businesses, residences, and a school. A downgradient stream had historical PCE concentrations of up to 400 µg/L. This stream flows through both a public park and a schoolground. The IHSB directed the RP to complete a vapor intrusion evaluation to include neighboring	Oversight of remedial actions continued. The RP has proposed a remedy consisting of source area soil removal and installation of an injection treatment wall for groundwater. Staff are requesting a formal remedial action plan be prepared under State oversight. Additional data received in November 2024 indicate contaminant concentrations are stable.	Responsible Party

		properties in 2022. No unacceptable risks were identified.		
Yadkin Road Circle K	Fayetteville/ Cumberland	TCE from an unknown source was detected in groundwater during a UST investigation. A vapor intrusion investigation was needed at adjacent shopping center.	Soil gas sampling was performed in September 2024. Results exceeded acceptable levels, Owner refused to provide access to perform indoor air sampling. No further action planned.	DWM

IHSB = DWM Inactive Hazardous Sites Branch, UST = Underground Storage Tank

VOC = Volatile Organic Compounds, SVOC = Semi-Volatile Organic Compounds

PAH = Polycyclic-aromatic hydrocarbons, MEK = Methyl-ethyl ketone, PCB = Polychlorinated biphenyl

* Inactive Hazardous Sites Cleanup Fund as authorized by G.S. 130A-310.6

** Bernard Allen Memorial Emergency Drinking Water Fund as authorized by G.S. 87-98

C. Pre-Regulatory Landfills

S.L. 2007- 550 established a statewide tax on solid waste disposal, half of which goes to address the hazards posed by landfills that predate federal and state rules on solid waste disposal. The portion of the solid waste disposal tax received by the program may be used only for addressing pre-regulatory landfill threats. The division received \$12,708,761 in tax revenue in FY 2024-25. Nineteen percent of the tax revenue may be used for administrative expenses. Included in the administrative expense allowance is \$455,058 for administration of the non-pre-regulatory landfill portion of the Inactive Hazardous Sites Program and \$500,000 for programs in the Division's Solid and Hazardous Waste Sections, leaving approximately \$1,012,871 for administration of the Pre-Regulatory Landfill Program.

The division has cataloged 688 unpermitted, unlined landfills, and they are listed by county in Appendix E. Initial work at each site involved confirming the location, determining the current use of the property, and identifying the use of surrounding property to help prioritize the sites for action. Based on inspections conducted as part of that work, 80 percent of the sites have been determined to have a water supply source, residence, school, church, day care or park on or within 1,000 feet of the landfill. The division established contracts for contaminant assessment and mitigation of the sites. Using these contracts, the nature and extent of the contamination was defined through testing. A remedy is then designed and implemented to address the exposure risks. The division also provides review and approval of contaminant assessment work being conducted by local governments at these sites and reimburses the cost of that work from the tax proceeds. In FY 2024-25 eight contaminant assessments were conducted by local governments with division oversight and reimbursement.

FY 2024-25 actions:

- 52 – Remedial investigations ongoing
- 8 – Local Government remedial investigations ongoing

- 3 – Remedial investigations completed
- 42 – Remedial designs ongoing
- 2 – Remedial designs completed
- 5 – Remedial actions ongoing
- 2 – Remedial actions completed
- 1 – No further action issued
- 1 – New sites were screened for program qualification and added to inventory
- 13 – Homes provided alternate water or treatment systems maintained
- 152 – Water supply wells sampled

The assessment and cleanup process is complex. Exposure caused by contaminated water supplies, contaminated vapors entering buildings, methane gas posing explosion risks and exposed waste on residential property must be addressed. Difficulties can arise in attempting to gain access to affected properties at each site and with illegal dumping during investigation and remedial action activities. PRLF staff coordinate with current property owners to determine the acceptable safe usage of each impacted parcel based on current and planned activities.

Remedial investigation ongoing during FY 2024-25:

Bethel Dump	Jonesville, Wilkes County
Bolivia Refuse Dump	Bolivia, Brunswick County
Burgaw Dump	Burgaw, Pender County
Buxton Dump	Buxton, Dare County
Cabarrus Disposal Dump	Concord, Cabarrus County
Cary Dump	Cary, Wake County
City of Fayetteville Landfill	Fayetteville, Cumberland County
City of Winston Salem (Overdale Rd)	Winston Salem, Forsyth County
Cumberland County/Cliffdale Landfill	Fayetteville, Cumberland County
Denver Landfill	Denver, Lincoln, County
Dudley Shoals Landfill 2	Dudley Shoals, Caldwell County
Dysartsville Dump	Dysartsville, Burke County
East Durham Park Landfill	Durham, Durham County
East End Park Landfill	Durham, Durham County
Gaston Refuse Disposal	Gaston, Northampton County
Gill Street Park	Zebulon, Wake County
Goldsboro Dump	Goldsboro, Wayne County
Greenville City Landfill	Greenville, Pitt County
Hanover Road Landfill	Burlington, Alamance County
Hardin Refuse Dump	Dallas, Gaston County
Harmony Refuse Disposal	Harmony, Iredell County
Henry River Community Dump	Hildebran, Burke, County

Hoglen Refuse Disposal	Waynesville, Haywood County
Howard Creek Landfill	Lincolnton, Lincoln County
Hurley's Dump	Biscoe, Montgomery County
Jackson Lake Road Landfill	High Point, Guilford County
Jacksonville Dump	Jacksonville, Onslow County
Lyon Park Landfill	Durham, Durham County
McAlpine Creek Park	Charlotte, Mecklenburg County
Miller Street Landfill	Gastonia, Gaston County
Mooresville Dump	Mooresville, Iredell County
Mooresville Landfill	Mooresville, Iredell County
N Davidson County Landfill	Midway, Davidson County
Northgate Park Landfill	Durham, Durham County
Old Allegheny County Landfill	Sparta, Alleghany County
Old Durham County Landfill	Durham, Durham County
Old Holly Springs Dump/Cary Sanitary LF	Holly Springs, Wake County
Old Raleigh #1 Landfill	Raleigh, Wake County
Old Raleigh #6 Landfill	Raleigh, Wake County
Old Raleigh #9 Landfill	Raleigh, Wake County
Phillips Park Landfill	Jacksonville, Onslow County
Princeville Dump	Tarboro, Edgecombe County
Rowan County Landfill	Salisbury, Rowan County
Rowan Road Landfill	Clinton, Sampson County
Scotland County Community Dump	Laurinburg, Scotland County
Southern Pines Dump	Southern Pine, Moore County
Southside Park Landfill	Charlotte, Mecklenburg County
Statesville Dump	Statesville, Iredell County
Swannanoa Landfill	Swannanoa, Buncombe County
Sweetwater Road Dump	Hickory, Catawba County
Walltown Park Landfill	Durham, Durham County
Waxhaw Dump	Waxhaw, Union County

Local Government remedial investigations ongoing during FY 2024-25:

Dare County Dump	Manteo, Dare County
Les Myers Park Landfill	Concord, Cabarrus County
Old City of Burlington SW Disposal	Burlington, Alamance County
Oxford Dump	Oxford, Granville County
Pilot Mt. Refuse Dump	Pilot Mountain, Surry County
Plymouth Refuse Dump	Plymouth, Washington County
Reidsville Landfill	Reidsville, Rockingham County
Yadkinville Refuse Disposal	Yadkinville, Yadkin County

Remedial investigations completed during FY 2024-25:

Hillsborough Dump	Hillsborough, Orange County
Manteo Dump	Manteo, Dare County
Old Richmond County Landfill	Rockingham, Richmond County

Remedial design ongoing during FY 2024-25:

Angier Refuse Dump	Angier, Harnett County
Beaufort Refuse Dump	Beaufort, Carteret, County
Belltown Road Dump	Belltown, Craven County
Bingham Park Landfill	Greensboro, Guilford County
Bud Holding Company Landfill	Greensboro, Guilford County
Burnt Mill Creek Landfill	Wilmington, New Hanover, County
Charlotte Motor Speedway Landfill #1	Concord, Cabarrus County
China Gove Dump	China Grove, Rowan County
City of Wilson Landfill – 1	Wilson, Wilson County
City of Winston-Salem (Silas Creek Pkwy)	Winston-Salem, Forsyth County
Durham County Landfill	Durham, Durham County
E. H. Glass Landfill	Greensboro, Guilford County
East Wake Landfill	Knightdale, Wake County
Elon College Landfill	Elon College, Alamance County
Fishburne Landfill	Arden, Buncombe County
Fishburne Refuse Dump	Arden, Buncombe County
Gaston County Landfill	Mount Holly, Gaston County
Greensboro City Landfill	Greensboro, Guilford County
Grifton Dump	Grifton, Pitt County
Henderson County Landfill	Hendersonville, Henderson County
Hickory Grove Road Landfill	McAdenville, Gaston County
Hominy Creek Landfill	Asheville, Buncombe County
Jacksonville WWTP at Sturgeon City	Jacksonville, Onslow County
Kinston Demolition	Kinston, Lenoir County
Knightdale Dump	Knightdale, Wake County
Manteo Dump	Manteo, Dare County
Monroe Landfill	Monroe, Union County
Mud Creek Dump	Hendersonville, Henderson County
Old Charlotte/Vanguard Center	Charlotte, Mecklenburg County
Old Hickory Landfill	Hickory, Catawba County
Old Raleigh #11 – Dorothea Dix	Raleigh, Wake County
Old Raleigh #4 Landfill	Raleigh, Wake County
Old Raleigh #5 Landfill	Raleigh, Wake County
Old Raleigh #8 Landfill	Raleigh, Wake County
Pond Road Landfill #2	Ashville, Buncombe County

Stanley Refuse Dump	Stanley, Gaston County
Statesville Road Landfill	Charlotte, Mecklenburg County
Tarboro Landfill	Tarboro, Nash County
Tin Mine Landfill	Lincolnton, Lincoln County
Trenton Refuse Disposal	Trenton, Jones County
UNC Old Sanitary Landfill	Chapel Hill, Orange County
Winnabow Landfill	Winnabow, Brunswick County

Remedial design completed during FY 2024-25:

Edgecombe County Landfill	Tarboro, Edgecombe County
Nash County Landfill	Red Oak, Nash County

Remedial action ongoing during FY 2024-25:

Albemarle Dump	Albemarle, Stanley County
Clayton Ball Field	Clayton, Johnston County
Nash County Landfill	Red Oak, Nash County
Sims Legion Park Landfill	Gastonia, Gaston County
Westgate Park Landfill	Cherryville, Gaston County

Remedial action (construction) completed during FY 2024-25:

Sims Legion Park Landfill	Gastonia, Gaston County
Westgate Park Landfill	Cherryville, Gaston County

No Further Action Issued during FY 2024-25:

Reynold's School Road	Canton, Haywood County
-----------------------	------------------------

D. Federal National Priorities List Sites Requiring a State Cost Share

1. Establishment of a Federal and State Superfund Program

Thousands of contaminated sites exist nationally due to hazardous waste being dumped, left out in the open, or otherwise improperly managed. These sites include manufacturing facilities, processing plants, landfills and mining sites.

In the late 1970s, toxic waste dumps such as Love Canal and Valley of the Drums received national attention when the public learned about the risks to human health and the environment posed by contaminated sites.

In response, Congress established the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) in 1980. Hazard Ranking System (HRS) is established as the principal mechanism for evaluating environmental hazards of a site.

In 1982, the EPA published the HRS as the principal mechanism for evaluating environmental hazards of a site. HRS is a numerically based screening system that uses information from

preliminary investigations to assess the potential threats that sites pose to human health or the environment.

CERCLA, or the “Superfund,” allows EPA, working with NCDEQ Division of Waste Management Superfund Section staff, to clean up contaminated sites. It also forces the parties responsible for the contamination to either perform cleanups or reimburse the state government for EPA-led cleanup work. When there is no viable responsible party, Superfund gives EPA and the State of North Carolina the 90 percent of the funds needed to clean up contaminated sites. CERCLA makes states responsible for the remaining 10 percent of the cleanup funds needed at these sites.

Goals of the EPA and state Superfund program are to:

- Protect human health and the environment by cleaning up contaminated sites;
- Make responsible parties pay for cleanup work;
- Involve communities in the Superfund process; and
- Return Superfund sites to productive use.

2. State Superfund Cost Share Fund (SSCSF)

S.L. 1999-237 Section 15.6 established that the DEQ may use available funds, with the approval of the Office of State Budget and Management (OSBM), to provide the 10 percent cost share required for Superfund cleanups on the National Priority List (NPL) sites having no viable responsible party to pay the operating and maintenance costs associated with these Superfund cleanups. These funds may be in addition to those appropriated for this purpose.

The Session Law, as revised by S.L. 2017-10, S.L. 2020-74, and S.L. 2020-78, also required DEQ to report to the Environmental Review Commission, Fiscal Research Division, and the Joint Legislative Oversight Committee on Agriculture and Natural and Economic Resources the amount and the source of the funds used.

North Carolina currently has 39 hazardous waste sites out of a nationwide total of 1329 sites on the EPA NPL. Two of them, Reasor Chemical and New Hanover County Airport, were delisted. The 39 active sites ranked as the nation’s priority to clean up actions. There are no viable responsible parties for 19 NPL sites in the State of North Carolina, and a combination of federal and state public funds are used to conduct remediation at these sites. The Hazardous Response Trust Fund (the federal Superfund) contributes 90 percent of the money for remedial action, and the state contributes the remaining 10 percent. The state also is obligated to conduct operation and maintenance (O&M) at NPL sites after the EPA completes its remedial action.

Summary of North Carolina Superfund Cost-Share Fund Status as of June 30, 2025

Amount of cost share funds distributed in FY 2024-25	\$411,461
North Carolina’s 10 percent cost share for past, ongoing, and pending cleanups (based on signed contracts)	\$12,697,393
Fund balance as of June 30, 2025	\$4,396,349
Amount currently committed in contracts for future cost share payments and operation and maintenance of remedies	\$3,047,442*
Unobligated Fund balance as of June 30, 2025	\$1,348,907

*In the future, this obligation amount will increase. Cleanup cost estimates are not available for sites that are currently in various stages of Remedial Investigation, and for which contracts are not yet signed. New sites may be added to the National Priorities List; some of which will require a state cost-share. Also, increases in remedial costs that differ from the original state/EPA contract amounts can occur.

Notably, Record of Decision documents for six federal trust fund lead/state cost share NPL sites were signed in recent years waiting for funding to start remedial actions. Five of these sites will be funded by the Federal Infrastructure Bill Fund. Sites funded under this bill will not require the state to pay 10% cost share. The State Superfund Contracts (SSC) were signed for these five sites: Ram Leather (\$17,220,000); ABC Cleaner (\$9,038,678); Hemphill Road TCE (\$7,939,772); Holcomb Creosote (\$7,209,778); Cristex Drum (\$10,159,863). An SSC amendment was signed for GMH to switch the remaining amount of \$3,057,630 to the Infrastructure Bill funding and de-obligate 10% of the state share from the original SSC. The total funding provided by Infrastructure fund for NC Superfund Program is \$54,625,721 without 10% state match, which saved state \$5,462,572.

The SSC for Cape Fear Wood Preserving site (\$20,549,537) may be signed after the Remedial Designs are completed and approved in 2025/26. The funding for this site will require 10% State cost share (\$2,054,954). The Record of Decision for Ore Knob site has been finalized; the first phase remediation will cost \$44,575,800. The cost of phase II and III remediation will also be substantial. The state cost share (\$4,457,580 for phase I) for the site will be required in 2026/2027. Horton Iron and Metal Co sites were added to the Fund-Lead site list, the cost of the remediation is estimated at \$21,196,320 and the State share will be \$2,119,632 in 2026/27.

Operations and Maintenance (O&M) for the following sites is being managed by North Carolina and paid for using the SCSF:

- FCX Statesville in Iredell County,
- Cape Fear Wood Preserving in Cumberland County,
- Davis Park Road TCE in Gaston County,
- Potter's Septic Tank Service Pits in Brunswick County.
- FCX Washington Plant in Beaufort County,
- Blue Ridge Plating in Buncombe County,
- Sigmon's Septic Tank Service in Iredell County,
- Carolina Transformer in Cumberland County.

O&M obligation at these 8 sites involves sampling wells and preparing reports, and site/well maintenance. The estimated O&M cost for all these sites is about \$240,000 per year.

Table IV-7a provides a list of the North Carolina NPL sites and the following information for each site: location, investigation/cleanup status, estimated costs for cleanup. Table IV-7a includes those sites where the federal trust fund/North Carolina cost share is required. Table IV-7b includes the status of responsible party-funded cleanups.

Table IV-7a. North Carolina National Priorities List – Sites Where Federal Trust Fund/North Carolina Share is Required

NPL Site	City/County	Operable Unit	Cleanup Status	Cleanup Cost	Work Phase Start
ABC One Hour Cleaners	Jacksonville/Onslow	OU1-Groundwater	RA	\$4,481,077	In Progress
		OU2-Soil	RA	\$1,675,548	In Progress

E. Summary of Inactive Hazardous Sites Funding for FY 2024-25

1. Inactive Hazardous Sites Cleanup Fund (Fund 6372) for FY 2024-25

Beginning Cash Balance		\$674,847
Deposits (FY 2024-25)		
	Appropriations	\$800,000
	No Further Action review fees	\$27,500

	Bankruptcy Income	\$10,676
	Total Deposits	\$838,176
Expenditures (FY 2024-25)		
	Orphan priority site assessment/remediation	\$513,387
	Treatment system maintenance of private water supplies	\$10,967
	Lab costs	\$540
	Total Expenditures	\$524,894
Ending Cash Balance		\$988,129
Obligations		
	Approved orphan priority site work as of June 30, 2025	\$124,861
	Laboratory and bottled water contract obligations*	\$77,412
	Ear-marked for alternate water for non-PFAS contamination in private water supplies	\$380,000
	Total Current Obligations	\$582,273
Current Effective Cash Balance		\$405,856

*Encumbered Under Contracts

It must be noted that the pandemic had a marked impact on the Inactive Hazardous Sites Branch ability to spend allocated funds, and returning to typical activity levels is still underway. Recovery from that, coupled with the demands of additional work due to emerging contaminants such as polyfluorinated compounds should put the program on track to more fully utilize the funds.

2. Revenue Dedicated to the Pre-Regulatory Landfills (Fund 6379) for FY 2024-25

Beginning Cash Balance		\$23,895,810
Deposits (FY 2024-25)	Tax (actual total income)	\$12,708,761
	Administrative expense overcharge refund	\$0
	Total Deposits	\$12,708,761
Expenditures (FY 2024-25)		
	Contracts	\$12,507,146
	Local government reimbursement	\$17,680
	Transfer to DWM Solid & Hazardous Waste Programs	\$500,000
Operating budget:		
	PRLF operating budget	\$1,012,871
	Inactive Hazardous Sites operating budget	\$455,058
	Combined operating budget	\$1,467,929
Total Expenditures		\$14,492,755
Ending Cash Balance		\$22,111,817
Total Current Contract and Local Government Obligations		

	(Encumbrances not yet Paid)	\$16,305,694
Current Effective Cash Balance		\$5,806,123

A portion of a solid waste disposal tax established by the legislature is dedicated toward contracting assessment and remediation at uncontrolled pre-regulatory landfills and to fund staff to implement the program. These funds are also used to fund a portion of the staff overseeing work at other Inactive Hazardous Waste Sites.

A table depicting the fund income and expenditures by years is below, and the trends are shown in graphical form in Figure IV-1.

Fiscal Year	Annual Receipts	Disbursements	Fund Balance
2008-09	\$3,904,260.91	\$46,846.21	\$3,857,414.70
2009-10	\$9,338,017.99	\$749,888.22	\$12,445,544.47
2010-11	\$9,175,887.91	\$2,846,727.53	\$18,774,704.85
2011-12	\$9,521,021.27	\$2,824,888.81	\$25,470,837.31
2012-13	\$8,850,589.92	\$4,273,171.09	\$30,048,256.14
2013-14	\$8,097,660.71	\$7,834,699.76	\$30,311,217.09
2014-15	\$9,094,712.92	\$10,629,385.28	\$28,712,428.51
2015-16	\$9,173,960.00	\$8,832,144.00	\$29,054,245.00
2016-17	\$9,816,029.45	\$7,378,389.70	\$31,491,884.47
2017-18	\$10,113,745.73	\$12,918,429.82	\$28,687,200.38
2018-19	\$10,509,092.00	\$22,422,020.00	\$16,774,272.38
2019-20	\$11,560,035.01	\$13,447,047.00	\$14,887,260.39
2020-21	\$11,464,201.14	\$7,834,580.96	\$18,516,482.18
2021-22	\$11,959,297.00	\$11,263,119.00	\$19,212,660.18
2022-23	\$12,366,462.76	\$11,483,399.16	\$20,095,723.78
2023-24	\$12,729,161.60	\$8,929,075.20	\$23,895,810.18
2024-25	\$12,708,761.91	\$14,492,755.07	\$22,111,817.02
2025-26	\$12,700,000.00	\$16,305,694.00	\$18,506,123.00

Projections for fiscal year 2025-26 were estimated using current project activities.

Figure IV-1. Pre-Regulatory Landfill Programs Funds

3. National Priorities List Cost-Share Fund (Fund 6375) for FY 2024-25

Estimated cost of federal trust fund/NC cost-share cleanups	\$126,973,930
North Carolina's 10% cost-share for pending/ongoing cleanups	\$12,697,393*
Total fund disbursements for cost-share payments	\$9,649,951
Balance as of June 30, 2025	\$4,396,349
Encumbered amount of the fund balance for cost-share payments	\$3,047,442
Effective Cash Balance	\$1,348,907

*Cleanup cost estimates are not yet available for all sites. The cost-share figure will increase as cost estimates become available. Other sites may be added to the National Priorities List that will require a state cost-share. This account is also used to pay for the state's operation and maintenance obligations at these sites. The fund has no continuing source of income.

Chapter V: Solid Waste and Materials Management

A. Executive Summary

G.S. 130A-309.06(c) requires DEQ to annually report the status of solid waste management efforts in the State to the General Assembly.

The Demographer's Office in the N.C. Office of State Budget and Management reported that North Carolina's population increased by 1.25 percent between FY 2023-24 and FY 2024-25, while the amount of waste disposed of in North Carolina's municipal solid waste (MSW) landfills and construction and demolition (C&D) landfills increased by 7.02% percent from an adjusted disposal amount of 13,420,085 tons in FY 2023-24 to 14,396,156 tons in FY 2024-25. A total of 16,188,508 tons of solid waste originating from North Carolina counties was disposed of at in state and out-of-state facilities. This is an increase in disposal of 1,688,029 tons from the previous fiscal year. It is estimated that approximately 1.5 million tons of this increase was debris generated from Hurricane Helene.

During FY 2020-21, the rule review and readoption process required by G.S. 150B-21.3A and initiated in 2013 was completed for the solid waste management rules in Title 15A, Subchapter 13B of the Administrative Code. As a part of the readoption process, the rules in Section .1700 of Subchapter 13B pertaining to coal combustion products were updated to be consistent with changes made to the General Statutes in the Coal Ash Management Act of 2014 (CAMA), including changes made to the annual reporting requirements. CAMA required in G.S. 130A-309.204(c) that annual reporting on the generation of coal combustion residuals (CCR) and coal combustion products (CCP) was required for public utilities only, and not for other generators of CCR or CCP.

Two current North Carolina public utilities generating CCR and CCP reported that they disposed of 633,071 tons of CCR in MSW landfills and did not dispose of any CCP in structural fills in FY 2024-25. CCP was instead sent for beneficial use within STAR® Units located at Duke Energy's Buck, Cape Fear, and H.F. Lee facilities. Disposal of produced and excavated ash material in coal ash monofills, which are special landfills that contain only coal ash waste, has increased as excavation of ash basins continues across North Carolina in accordance with the Consent Order signed in February 2020 directing Duke Energy to excavate more than 80 million tons of coal ash from open, unlined impoundments at several locations and place the excavated coal ash in onsite lined landfills. During FY 2024-25, 11,214,173 tons of CCR were placed in coal ash monofills.

Data used in this report, along with other subsidiary reports, is available online at:

<https://deq.nc.gov/about/divisions/waste-management/solid-waste-section/solid-waste-facility-lists-presentations-and-annual-reports/solid-waste-management-annual-reports>

1. Key Findings FY 2024-25

- The amount of waste generated in North Carolina and disposed of in MSW and CD landfills, and out-of-state permitted facilities amounted to 16,188,103 tons in FY 2024-

25, which is an increase of 1,687,684 tons from FY 2023-24. It is estimated that approximately 1.5 million tons of this increase was debris generated from Hurricane Helene.

- The 87 sanitary landfills permitted and operating in North Carolina reported disposing of a total of 14,395,779 tons of MSW and C&D solid waste, including waste imported from South Carolina and Virginia.
- North Carolina MSW and C&D solid waste facilities reported receiving 243,362 tons of waste from out-of-state sources for disposal in North Carolina landfills. Waste originating in South Carolina totaled 202,246 tons and waste originating in Virginia totaled 41,116 tons.
- Out-of-State permitted facilities reported receiving 1,501,573 tons of waste generated in North Carolina. Waste originating in North Carolina was exported to South Carolina (915,689 tons), Tennessee (296,645 tons), Virginia (245,629 tons) and Georgia (43,610 tons).
- The remaining capacity for the 41 active MSW landfills in North Carolina calculates to approximately 27.32 years at the average annual rate of disposal for all facilities, or 20.91 years at the FY 2024-25 rate of disposal.
- Industrial waste disposal amounted to 11,249,218 tons for FY 2024-25. North Carolina industrial waste is predominantly from producers of paper products (pulp and paper sludges) with contributions from the electric energy industry (CCR).
- The per capita rate of North Carolina waste disposed into in-state and out-of-state MSW, and C&D landfills increased to 1.47 tons per person in FY 2024-25 from 1.34 tons per person in FY 2023-24. Prior to FY 2024-2025 the per capita rate of North Carolina waste had remained steady between 1.31 and 1.35 since FY 2018-19. This increase is likely due to the debris generated from Hurricane Helene.
- The Solid Waste Section evaluated 157 Temporary Debris Storage and Reduction sites for Hurricane Helene Debris, of which 139 were approved for use. A total of 177 TDSR sites, including those previously established, were activated for Hurricane Helene.
- Coal ash disposal in a MSW landfill did not affect the per capita disposal rate in FY 2024-25 as shown in Table V-2 below.
- Excavated CCR from Duke Energy coal ash impoundments totaling 10,151,037 tons were reported as disposed of in onsite landfills in FY 2024-25.
- Flue gas desulfurization (FGD) waste produced from Duke Energy coal-fueled plants totaled 739,662 tons; however, 657,744 tons of produced and excavated FGD waste were credited as beneficially used.
- Local government recycling programs diverted 373,365 tons of household recyclables (i.e., glass bottles and jars, plastic containers, metal cans, paper, cartons, cardboard), which resulted in greenhouse gas savings of 1,001,417 metric tons of carbon dioxide equivalent.
- Additional recyclables recovered by local government programs totaled 1,835,442 tons which include yard waste, food waste, scrap metal, tires, electronics, textiles, construction and demolition debris, and other hard-to-recycle materials such as batteries, paint, automotive fluids, and chemicals.

- DEQ recycling grants continued to support important local government recycling infrastructure, market investments, and food waste diversion.

2. Departmental Considerations and Recommendations

- The General Assembly is encouraged to consider additional funding mechanisms to increase and enhance the materials management infrastructure which expands landfill life and supports a resilient economy.
- The General Assembly is encouraged to consider mechanisms to fund the collection and proper disposal of lithium-ion batteries in support of the landfill ban going into effect December 1, 2026.
- Due to the increased presence of and discovery of emerging contaminants like 1,4-dioxane and PFAS, the General Assembly is encouraged to evaluate liner requirements for all sanitary landfills, and C&D landfills in particular.
- The General Assembly is encouraged to consider technical corrections to S.L. 2025-66 for the scrap tire management program.

B. Solid Waste Management

Waste types handled at North Carolina facilities include municipal solid waste (MSW), industrial waste, construction and demolition (C&D) waste, land-clearing waste, scrap tires, medical waste, compost, and septage.

CCR, classified as industrial waste generated at North Carolina's six electric power plants, have received much study and attention because of CAMA. The Act requires that the coal ash in surface water disposal impoundments be removed, and the ash be placed into lined landfills or recovered. In recent years, CCR has primarily been disposed of in onsite industrial landfills at power plants or recovered for beneficial use primarily in the cement industry.

1. Municipal Solid Waste and Construction and Demolition Landfill Disposal

North Carolina generated and disposed of a total of 16,188,164 tons of waste (generated during the fiscal year) into MSW and C&D landfills within state and out-of-state. This represents an increase of 1,687,684 tons of waste from the previous fiscal year, the largest increase since FY 2018-19. It is likely that much of this increase in tonnage can be attributed to the impact of Hurricane Helene. Facility reporting indicated that the 39 North Carolina Counties designated by FEMA as a natural disaster area due to Hurricane Helene generated an estimated 1,505,462.68 tons of waste above what would have been expected from those counties based on FY 23-24 per capita rates. See Table V-1 below.

Table V-1. Helene Impacted Counties Expected vs Reported Tons

Category	FY23-24 Per Capita	FY24-25 Population	FY 24-25 Expected Tons*	FY 24-25 Reported Tons	Difference (Reported - Expected)
Helene Impacted Counties designated by FEMA (39)	1.34	4,618,189	6,183,795.96	7,689,259**	1,505,463
Non-Helene Impacted Counties (61)	1.29	6,360,342	8,204,427.73	8,358,989	154,561
Unspecified and Cherokee Reservation	--	--	--	139,916	--
Statewide Total	1.31		14,388,224	16,188,164	1,660,024

Notes:

Population List of Counties declared a disaster area by FEMA can be accessed here:

<https://www.fema.gov/disaster/4827>

*Expected Tons is FY23-24 Per Capita multiplied by FY24-25 population.

**Number includes tons that are known to be debris from Hurricane Helene, but from unspecified counties impacted.

Figure V-1 below displays the history of disposal of waste since 1991. For each fiscal year, the tonnage figure represents the material that was generated in North Carolina during that year that entered disposal facilities both in and out of state. The forecast is based on the per capita rate of waste generation in North Carolina. The waste generated forecast is set at the FY2023-24 rate of 1.34 tons per person rather than the FY2024-25 rate of 1.47 tons per person because the FY2024-25 rate is heavily impacted by Hurricane Helene debris and is not representative of a normal year.

Figure V-1. MSW and C&D Waste 20-Year Disposal Forecast

Note: Population data is from the OSBM State Demographer website: <https://www.osbm.nc.gov/demog/county-projections> for Annual County Populations available at the following web link: <https://www.osbm.nc.gov/population-projections-age-group-data>

Solid waste exported from North Carolina generators to out-of-state landfills located in Georgia, South Carolina, Tennessee, and Virginia totaled approximately 1,501,573 tons in FY 2024-25. During that period, North Carolina landfills received and disposed of approximately 202,246 tons of waste that originated from South Carolina and Virginia.

In addition to normal MSW and C&D waste, other post-industrial or business cleanups that are safely disposed of in lined MSW landfills include petroleum-contaminated soils from leaking storage tanks under DWM's Underground Storage Tank Section, and waste from development at industrial facilities under DWM's Brownfields Redevelopment Section.

Tables related to waste disposal per county, facility, and per capita can be found at:
<https://deq.nc.gov/about/divisions/waste-management/solid-waste-section/solid-waste-facility-lists-presentations-and-annual-reports/solid-waste-management-annual-reports>.

2. Coal Combustion Residual and Product Generation, Disposal, and Reuse

North Carolina public utility generators of CCR and CCP recorded 633,071 tons of generated coal ash disposed of in MSW or non-coal ash industrial landfills during FY 2024-25.

Produced and excavated ash material removed from coal-fueled plants and coal ash impoundments were reported as not used in structural fill projects. The reporting of zero placement of CCR and CCP within structural fills is a result of being governed by CAMA, beneficial use within STAR® Units located at Duke Energy’s Buck, Cape Fear, and H.F. Lee facilities, as well as better recovery systems. Disposal of produced and excavated ash material in coal ash monofills has increased as excavation of ash basins continues across North Carolina. Within FY 2024-25, 11,214,173 tons of CCR were placed in coal ash monofills.

Table V-2 shares information on the disposition of coal combustion wastes that intersected with landfill disposal. The information is derived from reporting of the two public utility companies that generate ash at their facilities across North Carolina.

Table V-2. Coal Combustion Products and Impoundment Excavation

Generator Annual Reporting	Coal Combustion Products (tons) generated		Ash (tons) excavated from impoundment
	FY 2024-25		
	Ash	Gypsum	
Total produced	6,095,548	739,662	11,214,173
Used as Structural Fill	-	-	-
Other Beneficial Uses	1,284,895	657,744	182,910
Disposed in MSW and Industrial Landfills (not Coal Ash monofills)	633,071	-	

- Recycling efforts continue to increase at industrial facilities statewide.
- Management of CCR, which consists of bottom and fly ash, is produced from coal-fired electric power plants and is disposed of in onsite CCR landfills. CCP in the form of ash are predominantly reused as an ingredient in cement.
- FGD residuals, or synthetic gypsum, is the primary ingredient in drywall.
- Fly ash, slag, and bottom ash can be used as construction material such as gravel or fill.
- S.L. 2016-95 revised CAMA and required that Duke Energy provide ash beneficiation projects capable of processing 300,000 tons of ash, reclaimed from surface impoundments, for cementitious products. The STAR® Units have been placed in service. Duke Energy has been addressing production challenges and will continue to

take measures to improve feed ash quality as well as pursue equipment modifications to increase production. Subsequently, Duke Energy fell short of reaching their annual processing goal by six percent and twenty-three percent respectively at the Buck and HF Lee STAR® sites. However, Duke Energy exceeded their annual processing goal in FY 2024-25 by three percent at the Cape Fear STAR® site.

- Duke Energy has three recycling sites in North Carolina located at the Buck Station (Spencer, N.C.), HF Lee Station (Goldsboro, N.C.) and Cape Fear (Moncure, N.C.).
- Duke Energy reported in FY 2024-25 that 657,744 tons of gypsum were sent to the drywall or wallboard industry for reuse.

3. Solid Waste Tax

The N.C. Department of Revenue reported solid waste tax distribution of \$25,412,629.64, which equates to 12,706,314.82 tons of taxable solid waste going into landfills within North Carolina and through transfer stations for export to landfills in neighboring states. The gap between reported disposed tonnage and tax-paid tonnage was due to:

- Waste disposed at federally owned landfills on military bases.
- Specific waste streams received at MSW facilities (for example, biosolids) that are exempt from the solid waste tax.
- Excavated CCR impoundment waste was not taxed because they were not transferred through a permitted solid waste facility.
- Hurricane Helene or other disaster debris that was directly hauled to out-of-state landfills without being transferred through a North Carolina permitted solid waste facility.

Revenue from the solid waste tax is distributed as follows:

- 50% goes to the Inactive Hazardous Sites Cleanup Fund which is used to fund the assessment and remediation of pre-1983 landfills.
- 37.5% goes to Local governments (18.75 percent to counties and 18.75 percent to municipalities) which is used to assist with their waste and materials management programs.
- 12.5% goes into the General Fund.

The Solid Waste Tax proceeds and distribution are summarized in Table V-3 below.

Table V-3. N.C. Dept. of Revenue Solid Waste Tax Distribution

PROCEEDS	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Totals
PROCEEDS AVAILABLE FOR DISTRIBUTION BEFORE COST	\$6,631,133.72	\$6,315,021.94	\$6,476,586.48	\$6,095,421.97	\$25,518,164.11
LESS: REIMBURSEMENT UNDER S.L. 2007-543	-	-	-	-	-
LESS: COST OF COLLECTING	\$25,906.32	\$27,434.61	\$25,856.28	\$26,337.26	\$105,534.47
PROCEEDS AVAILABLE FOR DISTRIBUTION	\$6,605,227.40	\$6,287,587.33	\$6,450,730.20	\$6,069,084.71	\$25,412,629.64
DISTRIBUTION OF PROCEEDS					

INACTIVE HAZARDOUS SITES CLEANUP FUND (50%)	\$3,302,613.71	\$3,143,793.67	\$3,225,365.11	\$3,034,542.36	\$12,706,314.85
AMOUNT AVAILABLE TO DISTRIBUTE TO CITIES (18.75%)	\$1,238,480.14	\$1,178,922.62	\$1,209,511.90	\$1,137,953.39	\$4,764,868.05
AMOUNT AVAILABLE TO DISTRIBUTE TO COUNTIES (18.75%)	\$1,238,480.14	\$1,178,922.62	\$1,209,511.90	\$1,137,953.39	\$4,764,868.05
GENERAL FUND (12.5%)	\$825,653.41	\$785,948.42	\$806,341.29	\$758,635.57	\$3,176,578.69
TOTALS	\$6,605,227.40	\$6,287,587.33	\$6,450,730.20	\$6,069,084.71	\$25,412,629.64

COMMENTS:

1. Solid waste disposal taxes are levied pursuant to Article 5G of Chapter 105 which provide for a per capita distribution of the proceeds.
2. A city or county is excluded from the distribution under Article 5G if it does not provide solid waste management programs and is not responsible by contract for payment for these programs and services, unless it is served by a regional solid waste management authority established under Article 22 of Chapter 153A of the General Statutes.

Note: Totals do not match DEQ budget reports for FY 2024-25 due to the timing of distributions from N.C. Department of Revenue (NCDOR). The table above was compiled using the following NCDOR data:

- 1st Quarter FY 2023-24: <https://www.ncdor.gov/solid-waste-disposal-tax-distribution-quarter-ending-09-30-2024>
- 2nd Quarter FY 2023-24: <https://www.ncdor.gov/solid-waste-disposal-tax-distribution-quarter-ending-12-31-2024>
- 3rd Quarter FY 2023-24: <https://www.ncdor.gov/solid-waste-disposal-tax-distribution-quarter-ending-03-31-2025>
- 4th Quarter FY 2023-24: <https://www.ncdor.gov/solid-waste-disposal-tax-distribution-quarter-ending-06-30-2025>

4. Per Capita Disposal Rate

Table V-4 below shows the history of North Carolina's per capita disposal rate, including the impact of including excavated CCR in that rate. The table shows the baseline measurement of solid waste disposal in the benchmark years of FY 1990-91 and 1991-92 as well as the most recent 19 fiscal years. Two calculations were performed to determine per capita waste this fiscal year – one showing disposal per capita for wastes generated during the fiscal year and the other including both generated waste plus excavated CCR.

Table V-4. North Carolina's Per Capita Disposal Rate

Fiscal Year	NC Population	MSW and C&D Disposed	MSW per Capita	Coal Ash Disposed	MSW minus Coal Ash Disposed	MSW minus Coal Ash Disposed per Capita
		[tons]	[tons]	[tons]	[tons]	[tons]
2024-25	10,978,531	16,188,508	1.47	0	16,188,163	1.47
2023-24	10,842,949	14,500,479	1.34	0	14,500,479	1.34
2022-23	10,705,403	14,037,108	1.31	0	14,037,108	1.31
2021-22	10,571,934	14,024,453	1.33	0	14,024,453	1.33
2020-21	10,472,553	13,949,017	1.32	0	13,949,017	1.32
2019-20	10,381,670	13,926,676	1.32	127,005	13,789,864	1.31

2018-19	10,284,335	13,855,649	1.33	32,809	13,813,449	1.35
2017-18	10,181,491	11,656,351	1.13	643,808	11,008,191	1.07
2016-17	10,080,436	11,231,358	1.12	1,678,882	9,707,057	0.96
2015-16	9,968,747	11,323,734	1.13	743,822	10,579,912	1.05
2014-15	9,881,906	9,635,874	0.97	Not Measured Prior to FY15-16	9,635,874	0.97
2013-14	9,804,787	9,273,571	0.94		9,273,571	0.94
2012-13	9,723,576	9,149,130	0.94		9,149,130	0.94
2011-12	9,644,670	9,443,380	0.98		9,443,380	0.98
2010-11	9,571,007	9,467,045	0.99		9,467,045	0.99
2009-10	9,435,396	9,395,457	1.00		9,395,457	1
2008-09	9,278,794	9,910,031	1.07		9,910,031	1.07
2007-08	9,090,572	11,284,712	1.24		11,284,712	1.24
2006-07	8,890,380	11,837,104	1.34		11,837,104	1.34
2005-06	8,685,811	11,765,183	1.36		11,765,183	1.36
1991-92 Benchmark	6,781,321	7,257,428	1.07		7,257,428	1.07
1990-91	6,632,448	7,161,455	1.08		7,161,455	1.08

The per capita disposal rate statewide rose to 1.47 tons per person in FY 2024-25 from 1.31 tons per person in FY 2023-24. Much of this increase can be attributed to the impact of Hurricane Helene. Facility reporting indicated that the 39 North Carolina Counties designated by FEMA as a natural disaster area due to Hurricane Helene saw an increase in per capita rate from 1.34 tons per person in FY 2023-24 to 1.665 tons per person in FY 2024-25, whereas the other 61 counties saw only a 0.02 tons per person increase in FY24-25. The comparisons are detailed in table V-5 below.

Table V-5. Per Capita Comparison Helene vs Non-Helene Counties

Category	FY23-24 Population	FY23-24 Tons	FY23-24 Per Capita	FY24-25 Population	FY24-25 Tons	FY24- 25 Per Capita
Helene Impacted Counties designated by FEMA (39)	4,551,382	6,106,654	1.34	4,618,189	7,689,259**	1.67
Non-Helene Impacted Counties (61)	6,281,567	8,109,078	1.29	6,360,342	8,358,989	1.31
Unspecified and Cherokee Reservation	--	284,747	--	--	139,916	--
Statewide Total*	10,832,949	14,500,479	1.34	10,978,531	16,188,164	1.47

Notes:

List of Counties declared a disaster area by FEMA can be accessed here: <https://www.fema.gov/disaster/4827>

** Number includes tons that are known to be debris from Hurricane Helene, but from unspecified impacted counties.

5. Municipal Solid Waste Landfill Capacity

A reported total of 12,070,752 tons of waste, including imported waste, were disposed of in North Carolina's 41 active, permitted Municipal Solid Waste (MSW) landfills. The total permitted remaining capacity of these MSW landfills measures approximately 364 million cubic yards, equating to approximately 252.5 million tons based on a calculated average compaction rate of 0.68 tons of waste per cubic yard of air space.

Estimating North Carolina's remaining years of landfill capacity is a difficult task due to the number of unknown variables. If the 41 active MSWs in the state remain at their annual averages of waste disposal from their opening dates, then North Carolina's MSW capacity calculates at 27.32 years of permitted volume remaining. If the rate remains at last fiscal year's rate of approximately 12 million tons, the state capacity calculates to 20.91 years remaining. Fiscal Year 24-25 was an outlier in terms of waste disposed, likely due to Hurricane Helene, which resulted in an estimated 870,000 tons of additional waste entering state C&D and MSW landfills. If the FY23-24 rate of approximately 11.3 million tons is used, the statewide capacity calculates to approximately 22 years.

These estimates don't consider future conditions or events that may affect landfill capacity. The continued population growth of North Carolina, or future disaster events may put additional pressure on landfills as more tonnage enters waste streams. However continued and future efforts to increase recycling and material diversion, and potential advances in technology that allow landfills to compact with greater density, may help maximize landfill capacity. Landfills may also apply for and receive additional permitted volume.

Landfill capacity in the State is currently sufficient, and all regions have access to adequate disposal capacity. However, the State's landfill capacity is not uniformly available statewide due to permit conditions, franchise arrangements, service areas, population densities, and distances. Some regions have limited disposal options and may be subject to higher disposal costs and possible disruptions in service should facilities close, or fuel costs become prohibitive due to transport to distant facilities. Some landfills, including BFI Charlotte Motor Speedway, Gaston County Landfill, Transylvania County Landfills, and Foothills Environmental Landfill are projected to come to capacity in the next 4 -8 years, the availability and convenience of municipal solid waste disposal facilities will change, and some areas will have less access than they do currently. Projections for all landfills are included in Appendix F.

Tabulation of both MSW and C&D landfill capacity can be found in the FY 2024-25 Landfill Capacity Report contained on the following website: <https://deq.nc.gov/about/divisions/waste-management/solid-waste-section/solid-waste-facility-lists-presentations-and-annual-reports/solid-waste-management-annual-reports>.

6. Industrial Landfill Disposal

In North Carolina there are 16 active permitted industrial landfills. These landfills disposed of 11,249,218 tons of various types of industrial waste originating from internal operations. The majority of industrial landfills are located where the waste is produced. The largest volume of waste disposed into industrial landfills is at electric power plants and from the paper product industry, which disposes of sludge and wood ash. Tabulation of landfilled industrial waste can be found on the FY 2024-25 Solid Waste Management Annual Report webpage, accessible online at: <https://deq.nc.gov/about/divisions/waste-management/solid-waste-section/solid-waste-facility-lists-presentations-and-annual-reports/solid-waste-management-annual-reports>.

7. Composting and Mulching

A total of 57 active composting operations continued to divert organics from the municipal solid waste stream. 930,131 tons of waste were initially diverted to facilities, with a 1% loss of unusable/disposed material. 816,279 tons of feedstocks were composted in FY 2024-25.

Figure V-2: Total Tons of Waste Received by Compost Facilities by Waste Type

Compost operations in FY2024-25 diverted 57,763 tons of food waste, including food processing residuals. Food waste diversion to compost facilities continues to be an opportunity to help prolong the lives of North Carolina's MSW landfills by reducing tonnage sent for disposal. A reduced amount of food waste also helps the landfills reduce methane emissions. For a detailed

look at the management of food waste in FY2024-25, please see Section C.11 Food Waste Diversion.

High-carbon materials such as yard waste, clean wood, sawdust, and pallets make up 66% of all received materials for FY 2024 - 25, with yard waste comprising 77% of the total high-carbon material. High-nitrogen materials (e.g. food scraps, animal waste, sludge, grease trap waste, animal mortalities) contributed just under 34% of the total material received.

Compost facilities produced 326,161 tons of compost, 204,956 tons of mulch (including wood mulch, dyed mulch, single hammer mulch, and leaf mulch), and 56,826 tons of boiler fuel. The destinations of these products are detailed below in Figure V-3.

Figure V-3: Compost Facilities Finished Product Distribution

In FY 2024-2025:

- 227,304 tons of compost were sold to the public.
- 88,135 tons of compost were stockpiled.
- 30,482 tons of compost were used internally/not marketed.
- 13,027 tons of compost were given to the public.

The total compost distributed for FY24-25 is greater than the amount of compost produced due to stockpiled products from previous fiscal years.

8. Septage Management and Land Application

The management and oversight of septage waste pumping, hauling and disposal is accomplished through staff permitting and compliance activities for more than 702 septage management firms (pumpers and non-pumpers), 175 septage detention or treatment facilities, and 102 septage land

application sites (representing approximately 1,500 acres). Septage disposal is by means of municipal wastewater treatment plants, septage land application sites, and, to some extent, solid waste compost facilities.

While most of the land-applied waste managed by the Solid Waste Section is septage waste pumped from domestic septic tanks, portable toilets, and restaurant grease traps, the program also assists waste generators with other wastes and by-products to determine if they are suitable for beneficial use through land application. Examples of beneficially reused waste include wood ash and tobacco dust. Best management practices are followed for each by-product to ensure the protection of public health and the environment after evaluation by staff and are included in the site operational plans.

Since septage management firm pumpers are permitted on a calendar year basis, the volumes of septic tank (domestic septage), portable toilet, and grease trap wastes pumped are reported for the previous calendar year. In the calendar year 2024, approximately 312,443,496 gallons total of domestic septage, grease septage, and portable toilet waste were pumped by septage management firms. This is a 10% increase above the 2023 calendar year total of 285,328,035 gallons pumped. The increase from 2023 to 2024 in the reported amount of domestic septage, portable toilet waste septage, and grease septage pumped may reflect an increase in demand for septage pumping related to steady growth in the State's population and economic development in 2024. Figure V-4 below shows the trend in amount of septage pumped per year over the last 25 years (1999 to 2024).

Figure V-4: Gallons of Septage Pumped Per Year (1999 to 2024)

9. Medical Waste

During FY 2024-2025, four permitted medical waste treatment facilities that receive waste from off-site operated in the state. There are also nineteen alternative medical waste treatment technologies approved for use in North Carolina that operate using a combination of waste shredding and steam sterilization, chemical, infrared, ozone, and heat to treat medical waste at individual generator locations.

Figure V-5 below shows the tonnage of medical waste treated at North Carolina's permitted medical waste treatment facilities during FY 2024-2025. A total of 16,322.48 tons of medical waste generated in North Carolina and 16,007.84 tons generated from other states, totaling 32,330.32 tons, was treated. A total of 25,352.00 tons of treated medical waste was disposed of in landfills in North Carolina with a waste tonnage reduction to (incinerator) ash of 8,465.00. A total of 142.00 tons was shipped out of the state for treatment, and 1,658.00 tons was liquids drained to POTWs. Figure V-5 does not include medical waste treated from healthcare facilities that treat its generated waste on-site.

Healthcare facilities that treat their own medical waste are regulated by the N.C. Department of Health and Human Services. The NCDEQ may address specific concerns regarding medical waste treatment such as packaged stored medical waste and treatment device operation.

Figure V-5: Tons of Medical Waste Processed by Fiscal Year

10. Household Hazardous Waste

Household hazardous waste (HHW) is household items that are toxic, ignitable, corrosive, and reactive. HHW includes items such as household cleaners, pesticides, herbicides, fertilizers, pool chemicals, paints, automotive fluids, and batteries. These waste types are dangerous to human health and the environment. The Solid Waste Section recommends that residents properly dispose of HHW at an approved collection site. Units of local government HHW collection sites may be temporary one-day events, commonly conducted in a physical structure, or permanent ongoing collection sites at brick-and-mortar locations.

Twenty-three counties in North Carolina have permanent HHW collection sites (30 sites total). These 30 permanent sites are permitted facilities and collected 7,065,119.00 pounds or 3,532.56 tons of HHW as shown in Table V-6 below.

Table V-6: Permanent HHW Facility Collections FY 2024-2025

Household Hazardous Waste	Pounds
Various paints	4,558,135.00
Flammable liquids and solids	570,987.00
Automotive oil, filters, and antifreeze	822,282.00

Lead-acid, cadmium, lithium and alkaline batteries	204,157.00
Mercury containing fluorescent light bulbs and other mercury-containing materials	111,078.00
Compressed gases	117,107.00
Poisonous materials such as insecticides, herbicides, fungicides, fertilizers, and pool chemicals	234,935.00
Corrosive materials	174,195.00
Oxidizing substances	111,764.00
Aerosols	139,886.00
Reactives	42.00
PCB/Ballasts	266.00
Propane tanks	129.00
Fire extinguishers	20,156.00

Twenty-five counties, eight municipalities, and two businesses held 58 one-day temporary HHW collection events during FY 2024-2025. The 58 events collected a total of 719,493.00 pounds or 359.75 tons of HHW.

Figure V-6 below illustrates the amounts of HHW collected annually since FY 2013-14. A complete listing of locations of permanent HHW sites as well as current one-day events can be found at: <https://deq.nc.gov/about/divisions/waste-management/hhw>.

Although the collection of HHW can be a costly endeavor, increasing numbers of units of local government as well as civic organizations, and private industries are arranging for this valuable service for North Carolina communities. The fiscal year total for all collections is 3,910.74 tons and the collection cost reported by units of local government for temporary and permanent collection events is \$919,865.00 and \$6,068,945.00, totaling \$6,988,810.00.

Figure V-6: Household Hazardous Waste in Tons by Fiscal Year

11. Facility Inspections

DWM's Solid Waste Section is responsible for conducting inspections/site visits at the following variety of solid waste management facility types:

- C&D Landfills over pre-regulatory MSW Landfills
- Closed Post-Closure Landfills
- Compost Facilities
- Construction & Demolition Landfills (C&DLF)
- Industrial Landfills
- Land Application Sites
- Land Clearing and Inert Debris Landfills (LCID)
- LCID Notification Landfills (open and closed)
- MSW Landfills
- Transfer Stations
- Coal Combustion Product Landfills and Structural Fills
- Household Hazardous Waste Collection Sites
- Material Recovery Facilities
- Medical Waste Treatment Facilities and Incinerators
- Septage Detention and Treatment Facilities
- Septage (hauler) Firms
- Tire Monofills
- Tire Processing / Collection Facilities

- Treatment and Processing Facilities
- White Goods Collection
- Yard Waste Notifications

In FY2024-25 Solid Waste Staff conducted a total of 1,034 inspections at permitted facilities. This does not include inspections of temporary debris staging and reduction sites for Hurricane Helene debris.

12. Non-Facility Inspections and Evaluations

In addition to the facility types listed above, the Solid Waste Section also provides inspections and evaluations for the following:

a). Illegal Dumping

The Solid Waste Section provides technical assistance to residents and businesses on the proper management, recycling, or disposal of solid waste. It investigates complaints regarding solid waste illegal dumping, working to have the sites cleaned up and taking enforcement action when necessary for the protection of human health and the environment. During FY 2024-25, the Solid Waste Section responded to and investigated 138 reports of illegal dumping.

The Solid Waste Section also works with local governments to establish and maintain ordinances and programs that address littering and indiscriminate dumping in their communities, and to avoid illegal dumping by communicating disposal procedures and locations to residents, especially following a storm or other disaster.

b). Disaster Preparation Activities

The Solid Waste Section collaborates with federal partners, N.C. Department of Public Safety's Division of Emergency Management, and local governments to support the Federal Emergency Management Agency's National Response Framework Emergency Support Functions (ESF) related to solid waste debris removal.

The Solid Waste Section continues to work with local governments to foster the message that disaster preparedness is essential, given the history of storm destruction in North Carolina, and encourages communities to establish pre-approved temporary debris storage and reduction (TDSR) sites for vegetative and demolition debris prior to an emergency or disaster. Pre-approval is critical because it allows for rapid mobilization of cleanup services as well as ensuring that the maximum reimbursement of cleanup costs from FEMA can be obtained by local governments. The Solid Waste Section maintains a database of pre-approved TDSR sites available for immediate activation in the event of a disaster. This database currently contains 808 pre-approved TDSRs.

Solid Waste Section staff also continued to develop and improve GIS (Geographical Information System mapping) tools for reporting, sharing, and summarizing information about the approved and active TDSR sites. The GIS tool is available here:

<https://ncdenr.maps.arcgis.com/apps/webappviewer/index.html?id=ff89064fe9514d759da54b868d93afc5>.

c). Disaster Response Activities

Beginning in late September 2024, the Solid Waste Section dedicated a great deal of staff time and resources to the response and cleanup from Hurricane Helene. A total of 157 potential Temporary Debris Storage and Reduction sites were evaluated for potential use for Hurricane Helene debris, of which 139 were approved for use. The Solid Waste Section coordinated closely with the State Historic Preservation Office (SHPO) and the Natural Heritage Program (NHP) to expedite reviews. This coordinated effort allowed approval decisions to typically be made within 72 hours of the submission of the requests. Including the previously established TDSRs in the impacted area, 177 TDSR sites were active at some point during the cleanup effort and solid waste staff conducted 257 inspections of TDSR sites.

Cleanup from Hurricane Helene has continued into FY2025-26. A total of 70 TDSR sites are still actively managing waste from Helene as of the time of writing. The Solid Waste Section continues to coordinate with local governments and FEMA, and to provide technical assistance with the proper disposal of storm debris.

d). Tax Certifications

The Solid Waste Section processes certification applications (see Figure V-7 below) for special tax treatment of facilities and equipment used in recycling of solid waste or resource recovery from solid waste. The Solid Waste Section has been processing these applications since the mid-1970s at no cost to the applicant. In 2023, the Solid Waste Section launched a new online application tool that allows for a more efficient application process and one that helps the Section track applications as they go through the process.

North Carolina's tax certification program is very robust and provides property tax benefits to numerous companies and business types. Tax certification programs in other southeastern states typically place more restrictions on the types of businesses that can apply. Since North Carolina's program is broad and open to any company or business that maintains assets used exclusively for recycling or resource recovery, the program has been an effective tool in new business recruitment for the State.

In the past seven years, the Solid Waste Section has processed approximately 1,100 certification applications. Figure V-7 below shows applications received and approved for the past seven years, while Figure V-8 shows that these approximately 1,100 applications resulted in an estimated value (as reported by the applicant) of \$1.5 billion in business equipment being exempted from local government property tax assessment. This amount does not include the value of the land and facility areas also exempted from local government tax assessment in that time frame since this data is not available. DEQ estimates that Solid Waste Section staff collectively spend time equivalent to two staff positions reviewing and processing tax certification applications, providing technical assistance, and conducting site visits for these facilities to determine whether the requested items comply with the General Statutes and NC

Administrative Code regarding special tax treatment. The estimated staff time does not include time spent by DEQ's DEACS staff providing additional technical assistance for these applications.

The estimated value of business equipment exempted was much greater in FY 2022-23 than in previous or subsequent years. This was due to an estimated \$363,769,560 of business equipment exempted from the three STAR® Units located at Duke Energy's Buck, Cape Fear, and H.F. Lee facilities, where CCR materials are recycled. More information regarding the STAR® Units is included in Section V-B-2 of this report. Figure V-8 includes a breakdown of the estimated value of business equipment exempted.

Figure V-7: Tax Certification Applications Received and Approved

Figure V-8: Estimated Value of Business Equipment Certified as Tax Exempt

The number of applications received for the Tax Certification Program in FY 2024-25 were the lowest seen in the last 20 years. Possible reasons for this decline could include overall economic uncertainty resulting in businesses not purchasing as much new equipment in FY 24-25. Although the total value certified appears much higher than previous years, this is because of one certification (Nucor Steel), which had a value of approximately \$245 Million.

13. Facility Operator Training and Public Outreach

The Solid Waste Section is committed to the protection of public health and the environment through education, inspections and compliance, and environmental monitoring. The section has a long-standing history of promoting training for the regulated community and public as required by statute as well as through technical assistance, collaboration, outreach activities, and customer service.

14. PFAS Sampling in Permitted Sanitary Landfills

The Solid Water Section has required all permitted sanitary landfills to sample their groundwater monitoring networks for PFAS and has directed facilities to update receptor surveys and sample private wells and provide alternate water when applicable. The majority of DWM programs are directing drycleaning facilities, pre-regulatory landfills, permitted hazardous waste facilities and inactive hazardous facilities to evaluate PFAS effects and where applicable direct these facilities to complete updated private-well receptor surveys and provide alternate water where applicable.

C. Local Government Waste Reduction Activities and Recycling Markets

Each unit of local government is required to report to DEQ annually about their solid waste management programs and waste reduction activities per G.S. 130A-309.09A. The Local Government Solid Waste and Materials Management Annual Reports help produce a picture of waste reduction, recycling, and materials management efforts in North Carolina. This data offers information that helps gauge the breadth and relative effectiveness of local government programs in diverting materials from disposal and delivering them to industry for reprocessing. Data from these annual reports also helps document the trends in recycling and reuse program implementation, and the evolving nature of public materials recovery efforts in North Carolina.

1. Source Reduction and Reuse Programs

Operating a source reduction or local reuse program can be a cost-effective way to help residents reduce the amount of solid waste that is discarded. These programs are typically popular with residents and have the potential to be a low-cost opportunity to engage the community, creating awareness about strategies that can be used to reduce the cost of disposal. Table V-7 examines the types of source reduction and reuse programs operated by local governments during FY 2024-25. Of North Carolina's 651 incorporated local governments, 45 counties and 47 municipalities – 92 total individual local governments – have at least one program focused on source waste reduction or reuse. There are several categories within each type of program. A local government could have multiple categories of one type of program.

In FY 2024-25, the number of local governments with a source reduction or reuse program increased by 6 from 86 local governments in FY 2023-24. With only 14 percent of NC local governments (92 out of 651) operating source reduction or reuse programs in their communities, there is a substantial opportunity for the creation of more reduce or reuse programs and initiatives across the state.

Table V-7: Local Source Reduction / Reuse Programs in FY 2024-25

Program Type and Category*	Number of Local Governments Operating Program, By Type
Backyard Composting Programs <i>35 Education Programs</i> <i>19 Demonstration Sites</i> <i>16 Compost Bins Sales (1,336 total bins sold)</i>	49
Public Reuse Programs <i>16 Swap Shops (67 swap shop locations statewide)</i> <i>10 Paint Exchange Programs (123,552.5 gallons of paint reused)</i> <i>3 Reusable Dish/Utensil Loan Programs</i> <i>12 Other Types of Reuses (e.g., book swaps, pallet exchange, moving box exchange, community closet, repair cafes)</i>	30
Source Reduction Programs <i>30 Programs Promoting Food Waste Reduction</i> <i>38 Programs Promoting Single-Use Plastic Reduction</i> <i>34 Programs Promoting Junk Mail Reduction</i> <i>52 Programs Promoting Reuse and Donation</i> <i>7 Programs Promoting Other Source Reduction Activities</i>	65

*Note: Some local governments operated multiple categories within one type of program.

2. Local Government Recovery

Table V-8 compiles local government materials recovery operations over the past five years. Local government recovery showed an overall increase in FY 2024-25 when compared to FY 2023-24. The amount recovered per capita increased by 98 pounds primarily attributed to the large amount of yard waste created and diverted due to the impacts of Hurricane Helene in Western North Carolina. Recovery of electronics and traditional household recyclables (e.g., paper, glass, plastics, metal cans) decreased, while recovery of construction and demolition debris, tires, and special recyclables (e.g., used motor oil, batteries, household hazardous wastes) increased.

Total recovery results from the past five years reflect a mature public recycling system that has maintained resiliency despite recycling market challenges beginning in 2018 and through the COVID-19 pandemic. Local governments operate a base level of programs and have maintained public participation in terms of material capture, even as manufacturers find new ways to reduce the weight of materials, also known as lightweighting, and paper consumption decreases with the use of more electronic devices. Highlights from Table V-8 will be examined in greater detail throughout this chapter.

Table V-8: Local Government Recovery in Tons from FY 2020-21 through FY 2024-25

Material	FY 2020-21	FY 2021-22	FY 2022-23	FY 2023-24	FY 2024-25
Total Paper	311,703	291,418	280,440	266,301	256,203
Total Glass	91,164	85,865	74,866	65,633	65,545
Total Plastics	38,185	36,993	34,148	39,754	39,615
Total Metal ¹	91,505	82,153	80,174	86,269	85,887
Total Organics ²	828,155	786,205	866,600	934,425	1,486,908
Special Recyclables	9,693	8,839	9,990	8,676	9,245
Electronics	10,624	8,908	8,172	8,175	7,792
Construction and Demolition Debris	90,586	98,165	104,330	102,989	111,475
Tires ³	118,165	97,899	110,475	137,694	144,866
Other	961	1,078	1,073	1,273	1,271
Totals	1,590,751	1,497,522	1,570,268	1,651,190	2,208,806
Per Capita Recovery (lbs.)	300.5	283.72	293.36	304.56	402.39
Recovery Ratio (Recycling:Disposal)	0.11	0.11	0.11	0.12	0.14

¹ Includes white goods, aluminum cans, steel cans and other metals.

² Includes yard waste, pallets, wood waste and food waste.

³ Tons of tires listed as recovered includes only those tires originating from within North Carolina that were processed in North Carolina. Data on the recovery of North Carolina-originated tires that were exported outside of the State is not available.

Public recycling programs play an important role in providing recovered materials to the supply chain for private manufacturing. Figure V-9 provides a material-specific look at those materials diverted from disposal to economic use by local government recovery operations in FY 2024-25.

Figure V-9: Characterization of Local Government Recovery by Weight in FY 2024-25

The single largest category of material recovered by local governments continues to be organics. This category includes vegetative debris, clean wood (unpainted and untreated dimensional lumber), pallets, food waste, and oyster shells. The recovery of vegetative debris or yard waste is accomplished through public and private mulching and composting, though boiler fuel and other energy markets are also an important destination for yard waste collected by local governments. For a detailed look at the management of food waste and yard waste in FY 2024-25, see Section C.11 Food Waste Diversion and Section C.12 Yard Waste Management.

The annual recovery of organic materials can be erratic because yard waste recovery can vary widely from one year to the next due to fluctuating weather conditions and large storm events. This is particularly evident during FY 2024-25 as organics constituted 67 percent of the total local government recovery, mainly due to the impacts of Hurricane Helene in Western North Carolina and the subsequent amounts of yard waste created. For comparison, in the previous fiscal year, organics constituted almost 57 percent of the total recovery by weight with yard waste making up 98 percent of this category.

3. Recovery of Traditional Materials

Traditional recyclable materials are the items or materials that most residents think of when reflecting on recycling. These materials include fiber (i.e., corrugated cardboard, magazines, newspapers, office paper, residential mixed paper) and containers (i.e., aluminum beverage cans,

glass bottles and jars, plastic bottles and containers, steel food containers). These materials are common in households, though they are also found in the workplace, bars, restaurants, and away-from-home settings such as parks and other public venues.

Recovery from households is either collected through curbside recycling programs, drop-off recycling programs, or a combination of both. Drop-off recycling means the collection of recyclable material from entities at one or more centralized sites. See Section C.8 and Section C.9 for more information on drop-off recycling programs and curbside recycling programs.

In FY 2024-25, North Carolina's local government recycling programs reported recycling 373,365 tons of traditional materials (i.e., glass bottles and jars, plastic containers, metal cans, paper, cartons, cardboard). Figure V-10 shows the tons of traditional materials recovered as reported by local governments since FY 2019-20, the first year of calculating and removing a portion of the commingled recycling tons as contamination, or non-recyclable material. Over the past five years, the year-to-year change ranges from 3 percent increase to 6 percent decrease. The total weight of traditional materials recovered by public recycling programs in FY 2024-25 decreased by 3.2 percent compared to the previous fiscal year.

Figure V-10: Local Government Traditional Material Recovery with Contamination Removed in Tons from FY 2019-20 through FY 2024-25

In FY 2024-25, the recovery of containers and fiber both decreased from the previous fiscal year. In years prior to FY2019-20, all materials collected through commingled recycling programs were allocated as recycled fiber or container materials. However, a portion of the collected commingled mix is known to be contamination that gets removed for landfill disposal. Beginning

in FY 2019-20, a percentage of the commingled mix is subtracted as contamination to provide a more accurate estimate of the true recycling resulting from commingled programs. In FY 2024-25, 21 percent of commingled tons were removed as contamination, as discussed in Section C.6. Collection of Commingled Recyclables.

Fiber recovery during FY 2024-25 decreased by 4 percent compared to FY 2023-24 and container recovery decreased by 2 percent. These declines may be partially due to the expanded practice of “lightweighting,” in which product manufacturers and distributors reduce packaging and use lighter materials to increase energy efficiency in shipping and processing. The decreased weight of materials entering the recycling stream can lead to a decrease in overall tonnage despite similar levels of participation and collection. Another contributing factor is the net loss of four curbside recycling programs, as discussed in Public Curbside Recycling Programs in North Carolina below. Although affected residents may still have access to drop-off recycling, participation and tonnage is significantly lower without the convenient access to curbside collection. This is especially true when garbage is still collected curbside, requiring residents to make an extra effort to bring recyclables to a drop-off point.

The overall changing composition of traditional materials recovery is known in the recycling industry as the “evolving ton”. The “evolving ton” is the changing makeup of recycled material (e.g., less paper consumption) and the lightweighting of material, meaning materials and consumer products that are lighter in weight. This may help explain the long-term decrease of recovery by weight of certain materials such as plastic and aluminum. Figure V-11 documents the trend in the recovery of traditional materials over the past 20 years. In addition, glass container recovery has steadily decreased since FY 2017-18 largely due to increased hauling and recycling costs and lack of competition in the marketplace for glass recyclers. As seen in Figure V-11, FY 2019-20 was the first year calculating and removing a portion of the commingled recycling tons as contamination. In addition, mixed paper has seen a steady decline since FY 2017-18, which can be attributed to the increased use of technology over paper products such as newspapers, magazines, and notebooks.

Figure V-11: 20-Year Traditional Recyclable Material Recovery from Local Governments in Tons from FY 2005-06 through FY 2024-25

The EPA has provided the Waste Reduction Model to help estimate the carbon dioxide equivalent emissions avoided from recycling instead of landfilling discarded materials. In most cases, manufacturing products from recycled material use less energy than manufacturing products from raw materials, which translates to fewer fossil fuels burned and reduced emissions of greenhouse gases that contribute to climate change. Recycling instead of landfilling these traditional materials resulted in estimated greenhouse gas emissions savings of 1,001,417 metric tons of carbon dioxide equivalent, which is equivalent to removing the estimated annual emissions of 212,615 passenger vehicles.

4. Recovery of Construction and Demolition (C&D) Materials

Local government recovery of C&D debris includes the capture of materials generated by construction and/or demolition activities. Materials in this waste stream include shingles, vinyl siding, sheetrock, carpet, and aggregate (i.e., brick, block, concrete, asphalt, other rubble).

Clean lumber and wooden pallets, corrugated cardboard, and scrap metal may also be generated because of C&D activities, though for the sake of this report when these materials are recycled by local governments they are included in categories for organics, paper, and metal, respectively.

Local government recycling efforts focused on the C&D waste stream can yield impressive tonnage diversion results. A large makeup of C&D recycling tonnage can be attributed to the recovery of aggregate such as concrete and brick. This material is relatively easy to recover at disposal facilities such as C&D landfills, and it can be processed into a gravel substitute, potentially providing substantial cost avoidance for the local government through a decreased need to purchase new gravel. C&D recycling in FY 2024-25 increased by 8.2 percent from the

previous year, with 111,475 tons reported. Figure V-12 below illustrates the change in the tonnage of C&D materials captured by public programs from FY 2006-07. The increase is mainly attributed to a sharp increase in recycled aggregate/inert debris from 70,297 tons in FY 2023-24 to 83,944 tons in this fiscal year.

Figure V-12: Public C&D Recycling in Tons from FY 2006-07 through FY 2024-25

5. Plastic Recycling in North Carolina

Total plastic recycling by local governments in North Carolina remained steady, showing a small decrease of 0.4 percent from 39,754 tons in FY 2023-24 to 39,615 tons during FY 2024-25. Manufacturers continue to use less plastic per container in container production which may lead to a decline in plastics recovery by weight. However, plastics recovery by volume, which is not reported, may be increasing because more plastic bottles are needed to maintain consistent recycling tonnage. Figure V-13 illustrates the public recovery of plastic by weight over the past 20 fiscal years.

Figure V-13: 20-Year Plastics Recovery from Local Governments in Tons from FY 2005-06 through FY 2024-25

Plastic bottles made of PET and HDPE combine to represent 88 percent of all plastic materials recovered by local governments in FY 2024-25. These materials have had strong markets in North Carolina and the southeastern U.S. Notably, the amount of “other plastic containers” (i.e., polypropylene, film, Styrofoam) increased 80 percent from the previous fiscal year. A contributing factor may be that more recycling processors are making investments to capture polypropylene tubs and containers and encouraging the communities they serve to collect these materials.

6. Collection of Commingled Recyclables

The nature of public recycling collection has changed substantially during the past two decades, with the public recycling system moving from the collection of source-separated (sorted) materials to the collection of commingled or mixed recyclables. The recycling industry uses the term commingled to describe when commodities of different types are mixed for collection and processing. The collection of mixed recyclables is commonly known as single-stream recycling and includes the traditional recyclable materials, or cans, bottles, and paper that are discussed in the earlier section, titled Recovery of Traditional Materials.

The benefits of single-stream recycling include increased collection efficiency and public participation due to the ease of use. The transition to a single-stream collection system has been enabled by the establishment of mechanized Materials Recovery Facilities (MRFs) where mixed recyclables are processed, sorted, and prepared for sale in the recovered materials marketplace. North Carolina is home to 16 MRFs that process the recyclables collected by public recycling programs.

When local governments submit their Local Government Solid Waste and Materials Management Annual Reports to the State, they are asked to provide data on the amounts and types of recyclable materials that they have collected. As communities continue to establish and change to programs with commingled collection of recyclables, an increasing amount of traditional recycling tonnage is reported as commingled versus source separated. Figure V-14 examines the reporting of commingled versus source-separated tonnage by communities over the last 20 years.

Figure V-14: 20-Year Reporting of Commingled vs. Separated Recycling in Tons from FY 2005-06 through FY 2024-25

When communities report commingled recycling tonnage, it becomes necessary to make assumptions about the constituents of those commingled materials to project recycling by individual commodities. As discussed in Section C.3, the changing makeup of the traditional material stream is known as the “evolving ton.” There are a variety of forces acting on the mix of materials in the commingled ton from the impacts of e-commerce to changes in the types of packaging used in consumer goods.

Each year, the MRFs processing the commingled materials in North Carolina are asked to voluntarily provide data on the composition of the commingled materials they process. This information is used to produce an average materials composition that is then used to project the recycling of individual materials – from paper and plastic to aluminum and steel cans to glass bottles and jars.

Fiscal year 2019-20 marked an important change in the calculation of commingled tons to project the recovery of individual materials. As previously mentioned, contamination is factored in as a percentage of the commingled mix since FY 2019-20. Contamination is defined as non-recyclable items that are incorrectly placed in the recycling bin and cannot be recovered for recycling.

Common examples include plastic bags, takeout containers, food and liquid waste, rubber hoses, wires, and textiles. While contamination has always been a part of the commingled mix of recyclables, more attention and focus have been placed on efforts to reduce levels of contamination and better information is being collected to measure the amount of contamination. In FY 2024-25, MRFs reported an average contamination level of 21 percent. This proportion (70,527 tons of contamination) of the reported total commingled recycling tonnage (332,872 tons) is assumed to be removed by the MRFs and sent for landfill disposal, decreasing the tons recycled to 262,345. Figure V-15 shows the constituents of the average ton of commingled recyclables collected in North Carolina based on data from MRFs in 2025.

Figure V-15: Constituents per Average Ton of Commingled Recyclables in FY 2024-25

7. Public Electronics Recycling

North Carolina residents continue to have wide access to recycling programs collecting electronics and televisions. Local governments operate electronics recycling programs in response to public demand for responsible e-waste management options as well as to help consumers comply with the State disposal ban on computer equipment and televisions that went into effect July 1, 2011. During FY 2024-25, 158 local governments indicated that they operated an electronics recycling program – many in partnership with another community. For example, in FY 2024-25, 25 municipalities indicated cooperating with their respective county to provide electronics recycling services, with the municipality collecting electronics from residents within their jurisdiction and then delivering the material to the county for further management.

Table V-9 describes the different types of electronics recycling services that communities offered in FY 2024-25.

Table V-9: Types and Number of Local Government Electronics Recycling Programs in FY 2024-25

Electronics Recycling Collection Method	Number of Programs Operated by Local Governments*
Curbside Pickup	32
Drop-off Program <i>390 Total Individual Drop-off Sites Operated</i>	107
One-Day Event(s)	33
HHW Program	9

*Note: Some local governments utilized multiple methods of collection.

As indicated in Table V-9, the most common strategy used to collect electronics is to accept them at staffed recycling sites or convenience centers. During FY 2024-25, 107 communities operated a combined 390 individual recycling sites statewide for electronics collection. Data on the amount of material collected by public electronics recycling efforts measures the collection of televisions, computer equipment, and other electronics, including printers, scanners, cell phones, tablets, video players, and other low-grade electronic devices. Figure V-16 examines public electronics recycling efforts since FY 2008-09 and shows the relative amounts of televisions and other electronics recovered each year, with computer equipment broken out separately from other electronics beginning in FY 2019-20.

Figure V-16: Public Electronics Recovery in Tons FY 2008-09 to FY 2024-25

Local governments recovered a combined total of 7,792 tons of electronic equipment during FY 2024-25 which is a decrease from 8,173 tons in FY 2023-24. Compared to FY 2023-24, the collection of televisions decreased by 10 percent from 5,080 tons to 4,558 tons; other electronics increased by 11 percent from 1,927 tons to 2,136 tons; and computer equipment decreased by 6 percent from 1,166 tons to 1,096 tons. Overall, the amount of combined electronics collected decreased by almost 5 percent from FY 2023-24.

This decrease in electronics tonnage collected by local government programs continues a gradual decline over nearly the past decade. North Carolina's electronics recovery by weight peaked in FY 2015-16 which corresponded with the largest amount by weight of televisions collected for recycling. This general trend is consistent with national data and reflects the changing material stream of smaller and more lightweight electronic devices, which is particularly true with televisions. It is likely that FY 2015-16 marked the peak in the recycling of Cathode Ray Tube (CRT) televisions in North Carolina. Compared to more modern flat panel display televisions, CRT televisions are substantially heavier and more difficult to handle for public recycling programs. Despite the lightweighting of electronics materials over time, and therefore a reduced weight of recovered electronics, the overall recovery remains strong with local government recovery programs providing reliable access to a growing population.

8. Types of Public Recycling Efforts

Public recycling programs employ different strategies to recover a range of materials, including the operation of curbside recycling programs, drop-off recycling programs, and other recycling

programs that collect traditional recyclable materials from parks, schools, businesses, and multi-family properties. Public recycling programs also manage special recyclables to divert potentially toxic or hazardous materials from disposal. In addition, local governments offer services that target specific waste streams (e.g., C&D debris, scrap metal, yard waste, food waste, textiles, oyster shells) that cannot be commingled with traditional recyclables. These specialty streams do not go to MRFs for processing. North Carolina counties are statutorily responsible for providing services to collect and manage white goods and scrap tires, though in some cases these services may also be operated by municipalities on behalf of a county. Table V-10 examines the types of public recycling programs operated by local governments during FY 2024-25.

Table V-10. Types and Number of Public Recycling Programs Operated by Local Governments in FY 2024-25

Program Type and Category	Number of Programs Operated by Local Governments, By Type*
Drop-off Recycling <i>11,949 Convenience Site Locations</i>	163
Curbside Recycling <i>262 Cart-based</i> <i>276 Single Stream</i>	293
Other Types of Recycling <i>82 Multifamily Programs</i> <i>35 Commercial Business Programs</i> <i>122 ABC Collection Programs</i>	151
Away From Home Recycling <i>145 Public Parks Programs</i> <i>99 Athletic Fields/Venue Programs</i> <i>63 Pedestrian Programs (e.g., downtown areas, sidewalks, bus stops)</i> <i>151 Special Events/Festivals</i>	458

*Note: Some local governments operated multiple categories of one program type.

Local governments can also implement policies and employ strategies that encourage or facilitate private-sector recycling activities without necessitating that public recycling programs directly or contractually provide a recycling service. Examples of these strategies include local disposal bans on materials, such as corrugated cardboard, mandatory recycling ordinances, and licensed hauler systems where service providers are required to offer recycling collection as a condition of doing business in a jurisdiction. In FY 2024-25, 181 local governments reported having a disposal ban on some type of material. These types of strategies encourage the growth of private sector recovery activities and infrastructure.

9. Public Curbside Recycling Programs in North Carolina

Public curbside recycling programs provide an easy path for residents to recycle and typically collect the traditional recycling materials (i.e., paper, glass, metal, plastic) from households. However, curbside recycling programs continue to face challenges from collection rate increases

and high contamination charges from recycling haulers and processors following the transition to domestic recycling markets and cost models.

North Carolina local governments reported 293 publicly operated curbside recycling programs during FY 2024-25, as shown in Figure V-17. This represents a reported net decrease of four curbside programs compared to the 297 reported in FY 2023-24. A summary of changes is provided below.

- Topsail Beach contracted with a local private hauler to launch a curbside recycling program with 1,404 households in its jurisdiction.
- Madison County newly reported its commercial curbside program though the program itself is not new.
- Six local governments ended curbside recycling programs:
 - Elizabeth City ended its program in 2023 for its 8,010 households due to high contamination rates. The city now directs residents to Pasquotank County convenience centers.
 - Fontana Dam ended its program for its 105 households.
 - Mount Holly discontinued its program for its 7,000 households effective July 1, 2024, citing increased costs. Residents are encouraged to use the Gaston County drop-off sites.
 - Speed discontinued its program for its 32 households due to financial constraints.
 - Turkey ended its contracted curbside recycling program for its 136 households. Residents can take recyclables to a drop-off container at Town Hall.
 - Tyrrell County discontinued its curbside program for its 2,036 households due to rate increases.

With six local governments ending curbside recycling programs, residents must use alternative avenues to recycle, if available in their areas. DEACS continues to work with local governments to build sustainable recycling programs and identify solutions.

Despite the ending of some programs, curbside recycling services continue to be the most popular method of recycling collection for North Carolina residents as seen in Table V-11. This table shows a breakdown of the local government recycling collection methods for traditional materials from FY 2024-25. Through the 293 active curbside recycling programs, nearly 2 million households were served with an estimated 312,822 tons of material recycled in FY 2024-25 compared to the 96,994 tons collected through drop-off site collection. The curbside recycling collection only programs account for 70 percent of the total traditional materials (i.e., paper, glass, metal, plastic) collected through all public recycling programs, including curbside, drop-offs, and other programs.

Table V-11: Local Government Recycling Collection Methods of Traditional Materials in FY 2024-25

Collection Method	Counties	Municipalities	Total Tons Collected
Curbside Collection Only	3	235	312,822

Drop-off Collection Only	79	28	96,994
Curbside AND Drop-off Collections	17	39	
Total Recycling	99	302	
No Recycling Program	1	249	

Figure V-17: Number of Local Governments with Curbside Recycling Programs and Households Served from FY 2005-06 through FY 2024-25

10. Special Recyclables

Many counties and municipalities in North Carolina offer their residents the opportunity to recycle a wide range of additional materials beyond the traditional paper, bottles, and cans commonly collected in curbside and drop-off programs. These ‘special recyclables’ include automotive-related materials such as oil, oil filters, and antifreeze as well as other ubiquitous household items such as cooking oil, batteries, and fluorescent lamps as shown in Table V-12. Recycling services for special recyclables are typically provided at staffed collection locations such as county solid waste convenience centers or municipal public works departments. Some communities only collect special recyclables at temporary household hazardous waste (HHW) collection events or programs, while others collect these types of materials year-round at permanent locations.

Special recyclables tonnages can be affected by a range of factors, including a program’s implementation or discontinuance, scheduling of collection/removal in relation to market price, and changes in local record-keeping and reporting. The scrap or reclamation value of a particular specialty waste can also impact its collection rate. For example, when the scrap value of lead is down, communities generally collect more lead acid batteries; whereas, when the scrap value of

lead is high, residents are more likely to bring used lead acid batteries to private scrap yards where the batteries can be sold.

Two types of HHW programs are operated by local governments: temporary and permanent. Temporary HHW programs, also known as one-day events, are designed to collect HHW at a temporary location approved to be used for a single specific date or time-limited operations for disaster debris removal. Permanent HHW programs are for the collection of materials year-round at a facility permitted by DWM. Some local governments accept materials from Very Small Quantity Generators (VSQGs), or businesses that generate small amounts of HHW and are not required to report to the Solid Waste Section. Three local governments reported HHW collected from VSQGs in FY 2024-25, totaling 8,069 pounds of material. Information about HHW collection programs is available in Section B.10 Household Hazardous Waste above.

Table V-12 shows the recovery of special recyclables by local governments during FY 2024-25 while Figure V-18 shows the special recyclables recovery in tons over the past five years. This is the first year when local governments reported lithium-ion batteries and solar panels separately from ‘other type.’ This was done to individually track these emerging streams and to gather information for the upcoming landfill ban on lithium-ion batteries and the existing C&D landfill ban on solar panels. The overall tonnage of special recyclables diverted through local government programs has fluctuated in the past five years from decreasing by 8 percent in FY 2021-22, to increasing by 12 percent in FY 2022-23, to decreasing by 13 percent in FY 2023-24, and increasing by 9 percent in this fiscal year.

Table V-12: Local Government Special Recyclables Management in FY 2024-25

Special Recyclables Type	Number of Programs	Tons Collected
Automotive		
Used Motor Oil	110	3,163
Oil Filters	82	83
Antifreeze	68	188
Batteries		
Lead Acid Batteries	72	515
Dry Cell Batteries	30	48
Lithium-Ion Batteries	25	10
Paint		
Paint Recycling	14	646
Paint Reuse (Exchange Program)	10	62
Pesticides		
Pesticides	15	9
Pesticide Containers	34	89
HHW		
Permanent HHW Programs	29	3,533
Temporary HHW Events	57	378
Other		

Lights Containing Mercury	44	42
Propane Tanks	34	109
Used Cooking Oil	64	360
Solar Panels	2	0
Other	9	9
Total		
Total Special Recyclables Recovery	118	9,245

Figure V-18: Local Government Special Recyclables Recovery (Tons) from FY 2020-21 through FY 2024-25

11. Food Waste Diversion

The diversion of food waste from landfill disposal has become a major focus area with the Use the Food NC statewide campaign launch by DEACS in Fall 2022. Food waste diversion efforts include promoting food waste prevention outreach, providing grant funding for projects focused on expanding food donation networks and organics recovery, and advancing composting and other organics recovery infrastructure in North Carolina. Additional information about the Food Waste Reduction Grant funding is detailed in Section C.15 Overview of the Solid Waste Management Outreach Program.

Figure V-19 shows the overall amount of food waste collected for composting through local government programs and the total number of these programs operated by local governments in FY 2024-25. Local governments first began reporting food waste tons separate from other organics material in FY 2020-21. Local governments have steadily implemented drop-off-based food waste collection for composting programs in the past five years with a total of 10 local

government programs in this fiscal year. These programs provide increased access to composting and organics recycling in areas across the state and decrease the amount of food waste disposed of in landfills. In FY 2024-25, local governments recycled a collective total of 1,469 tons of food waste. This is an increase from FY 2023-24 when 1,253 tons were recovered, a 17 percent increase. In addition, several local governments are planning, or currently, building composting facilities to further increase food waste and other organics material recovery. For more information on composting and mulching operations, see Section C.5 Composting and Mulching.

Figure V-19: Food Waste Collection for Composting Programs Operated by Local Governments from FY 2020-21 through FY 2024-25

12. Yard Waste Management

In 1989, the State of North Carolina banned yard waste from landfill disposal except in landfills approved for yard trash, known as land clearing and inert debris (LCID) landfills per G.S. 130A-309.10. Some locally managed yard waste is disposed of in LCID landfills, which is allowed under the yard waste disposal ban. However, as in past years, not all the material delivered to LCID facilities is disposed of. Some of it may be converted by LCID operators to mulch, compost, or biomass fuels, undercounting actual total diversion, though these activities are not discussed here. For information about permitted landfills, see Section B.

The overall amount of yard waste managed by local programs in FY 2024-25 increased by about 165 percent from FY 2023-24. The dramatic increase is mainly attributed to the impacts of Hurricane Helene in Western North Carolina. Eighty-six local governments indicated operations were affected by storm events compared to 23 reported in FY 2023-24. Of the 2,792,452 tons

managed by municipalities and counties during FY 2024-25, 1,470,074 tons of yard waste were diverted from disposal in four main ways: delivery of materials like leaves to gardeners and farmers (end-users); processing by local government mulching and composting operations; mulching and composting of locally collected materials at private facilities; and sale of yard waste materials to boiler fuel and other energy markets. Table V-13 examines the use of these strategies in FY 2024-25 and compares that to FY 2023-24.

Due to the impacts on yard debris from Hurricane Helene, some municipalities and counties were permitted to stage or stockpile material for future diversion or incinerate excessive material. Stockpiled material may lead to increased diversion tonnages in the next fiscal year once processed.

Table V-13: Local Government Yard Waste Management in Tons in FY 2023-24 and FY 2024-25

Destination of Materials	FY 2023-24 Tons Managed	FY 2024-25 Tons Managed
End Users (direct delivery)	70,201	40,637
Local Mulch/Compost Facility	657,719	736,310
Local Government Yard Waste Diverted to Private Mulch and Compost Facilities	119,385	650,747
Wood/Yard Waste Fuel Markets	70,666	42,380
Total Diversion from Disposal	917,972	1,470,074
LCID Landfill*	136,174	513,402
Stockpiled/Staged	-	797,506
Incineration (e.g., air curtain incinerator)	-	11,470
YARD WASTE TOTALS	1,054,146	2,927,926

*Note: Yard waste tons delivered to LCID landfills, stockpiled/staged, or incinerated are not included in diversion calculations.

Figure V-20 shows the total tons of yard waste diverted by local governments in the past 20 years as well as major storms impacting yard waste tonnages. Since FY 2005-06, the total amount of yard waste diverted is now at 14.7 million tons of material, which is equivalent to 23.7 million cubic yards of landfill space saved.

Figure V-20: Local Government Diversion of Yard Waste from Disposal from FY 2005-06 to FY 2024-25

13. Recycling Markets and Prices

Recycling commodity prices fluctuated across all materials in FY 2024-25. Fiber (i.e., mixed paper, cardboard) decreased; metal (i.e., aluminum cans, steel cans) oscillated; plastics fluctuated before hitting a low at the end of the fiscal year; and glass remained in negative price per ton value.

Figure V-21 shows a five-year history of the quarterly blended value, or weighted average price, of a ton of commingled recycling material at MRFs and Table V-14 shows the calculation of the MRF blended value.

Figure V-21: Quarterly MRF Blended Material Values from FY 2020-21 through FY 2024-25

When considering the blended material value of a ton of commingled recycling, it is important to consider the makeup of the traditional recycling mix, as provided in Table V-14. Glass and contamination make up 37% of the weight of the commingled mix, both of which have a cost to manage. Whereas the most valuable commodities by weight (aluminum and HDPE natural) in Summer 2025) make up only 2.2% of the weight of the commingled mix. With a blended value averaging \$77 per ton in FY 2024-25, MRF processing costs exceed revenue, causing most haulers and local governments to pay tipping fees to drop off recyclables. That revenue does not cover the cost for MRFs to process the materials, meaning that most haulers or local governments are charged a tipping fee to drop off recyclables.

In addition, contamination continues to be an operational challenge for MRFs. To meet the expectations of domestic markets and the stricter standards of international markets, these facilities have added labor, slowed production lines, and invested in equipment to remove contaminants and produce higher-quality outgoing commodity bales. While the improved quality of recycling is favorable, these adjustments require increased per-ton processing costs which are directly passed on to customers, including local governments.

Table V-14: Calculation of MRF Blended Material Value from Summer 2025

Material	Percent of One MRF Ton	Market Price Per Ton	Proportional Value in One MRF Ton
Aluminum Cans	1.5%	\$1,720.00	\$25.08
Steel Cans	1.8%	\$168.33	\$2.98
PET	5.5%	\$160.00	\$8.78
HDPE Natural	0.7%	\$940.00	\$6.59
HDPE Colored	1.2%	\$80.00	\$1.00
Mixed Plastics	1.3%	\$0.00	\$0.00
Corrugated Cardboard	27.8%	\$89.67	\$24.94
Mixed paper	22.8%	\$42.33	\$9.66
Glass	16.2%	-\$58.00	-\$9.40
Contamination	21.2%	-\$70.00	-\$14.83
Total	100.0%		\$54.79

Figure V-22 shows the history of paper pricing throughout the past 20 years, demonstrating the fluctuating aspects of commodity markets. The value of cardboard and mixed paper decreased during FY 2024-25, with cardboard ending the fiscal year 32% lower in value and mixed paper worth about half the value compared to Summer 2024.

Figure V-22: 20-Year Market Prices Received for Fiber Materials by Major North Carolina Processors from FY 2005-06 through FY 2024-25

Figure V-23 shows 20-year pricing for three key container materials: aluminum, PET, and HDPE. Aluminum and natural HDPE pricing increased from the previous year by 9% and 24%, respectively. PET and colored HDPE pricing decreased from FY 2023-24 by 60% and 76%, respectively.

Figure V-23: 20-Year Market Prices Received for Select Container Materials by Major North Carolina Processors from FY 2005-06 through FY 2024-25

14. Recycling Market Developments in FY 2024-25

During FY 2024-25, DEQ continued to partner with the Carolinas Plastics Recycling Council (CPRC), a collaborative effort between DEQ and the South Carolina Department of Commerce, dedicated to advancing plastic container recovery in the Carolinas. Building on the initial launch in March 2024, the 2024-2025 Your Plastics Means Products Roadshow expanded into a four-session, bi-state series reaching nearly 200 public, private, and nonprofit stakeholders across North and South Carolina. Sessions were hosted at Atlantic Packaging (NC) in March 2024, Southeastern Container (NC) in September 2024, Alpek Polyester (SC) in February 2025, and Milliken & Company (SC) in May 2025, with each event focused on a different segment of the plastics value chain. CPRC's Roadshow showcased companies transforming recycled plastics into new products and created space for candid discussion about market volatility, infrastructure gaps, combating public skepticism about recycling, and the role of policy in stabilizing recycling systems.

North Carolina's private-sector recycling economy continued to evolve during FY 2024-25, reflecting both growth and realignment across the sector. Powerhouse Recycling's solar panel recycling line in Salisbury entered a new phase of expansion, with its subsidiary (SPR) announcing the addition of a 50,000-square-foot processing facility to expand solar panel recycling capacity in North Carolina. This investment positions the facility as a regional hub for managing end-of-life solar panels and signals a transition from pilot infrastructure to a scalable, long-term solution for an emerging waste stream. At the same time, the market experienced structural shifts. In 2024, Alpek announced the closure of its PET recycling facility, Clear Path Recycling, near Fayetteville. These changes reflect broader national pressures on plastic recyclers, including low

virgin resin prices and tightening margins for processors operating in a highly competitive market. While these closures underscore the challenges facing domestic recyclers, they also highlight the importance of building a resilient, diversified recycling economy.

FY 2024-25 also saw growth in the recycling system as Green Metals announced plans to establish a lithium-ion battery recycling facility in North Carolina, building key infrastructure for managing waste streams from renewable energy technology. The project reflects a broader shift toward recovering critical materials from emerging waste streams and shows how North Carolina continues to attract investment in next-generation recycling.

15. Overview of the Solid Waste Management Outreach Program

In FY 2024-25, DEACS administered three grant programs, made possible through the Solid Waste Outreach Program with funding from annual appropriated legislative funds, to support waste reduction activities across the state: the Community Waste Reduction and Recycling Grant (CWRAR); the Recycling Business Development Grant (RBDG); and the Food Waste Reduction Grant (FWR). The CWRAR is open to all North Carolina local governments while the RBDG is open to recycling businesses, either for-profit or non-profit. FWR eligible applicants include compost facilities, compost haulers, local governments, anaerobic digestion facilities, and food recovery organizations. Each year, DEACS sets priorities that support investments: in public recycling program areas to grow efficient and effective waste reduction and recycling programs, in the private recycling sector to strengthen the state's recycling infrastructure, and in public food recovery and organics diversion programs to expand organics recycling throughout North Carolina.

The purpose of the CWRAR grant is to build lasting capacity to divert materials from the waste stream and/or increase public awareness of recycling. Funds are used to help purchase physical infrastructure or equipment to divert materials from the waste stream, or to purchase, print and distribute educational materials to inform the public about waste reduction and/or recycling programs. For FY 2024-25, CWRAR priorities included: projects implementing new or expanding existing curbside recycling programs or transitioning a curbside recycling program from bin or blue bag collection to a cart-based collection system; projects implementing a new or expanding an existing HHW program; or projects implementing a new or expanding an existing recycling program targeting lithium-ion batteries, solar panels, or other electronics.

The twenty-six awarded projects in FY 2024-25 supported improvements to convenience site infrastructure, enhancements to away-from-home programs, upgrades for HHW and electronics collection programs, and outreach campaigns aimed at educating residents on proper recycling practices. These projects were expected to help divert an estimated 1,432 tons of material from landfill and impact an estimated 747,582 households.

The purpose of the RBDG is to invest in equipment, buildings and infrastructure to increase the capacity of a recycling business to divert more materials from disposal and into economic use. The program plays a central role in strengthening North Carolina's recycling economy through targeted business investments. This year's priorities included: projects that expand, upgrade, or

improve the capacity and/or efficiency of a single-stream MRF; or projects that establish or expand recycling processing capacity for solar panels, electric vehicle batteries, or lithium-ion batteries. DEACS awarded funding to nine recycling companies across the State. These projects were expected to generate more than 30 jobs, catalyze new private investment, and reduce reliance on landfill disposal by expanding in-state processing capacity. The funded projects focused on stabilizing and strengthening plastic and organics processing, upgrading MRFs, expanding solar panel recycling, and improving the collection of recycled materials.

Another focus area of the state's recycling grant programs during FY 2024-25 was the diversion of food waste from landfill disposal through the FWR. The purpose of the grant program is to reduce the amount of food disposed of in landfills by expanding and enhancing food donation networks and composting infrastructure. This year's priorities included: projects that result in edible food destined for landfill being recovered and distributed to people, and projects for the construction, expansion, or renovation of organics recycling facilities and/or hauling operations that were new or in operation for less than five years. DEQ awarded funding to three local governments, three non-profit organizations, and six private businesses to support projects that improve efficiencies of compost processing facilities; enhancements to food donation and food distribution organizations; implementation of food scrap collection programs; and other food waste diversion projects. These projects were expected to reduce 4,315 tons of food waste from going to landfills and provide an estimated 1.1 million meals.

D. Scrap Tire Management Program

1. Scrap Tire Management

As per G.S. 130A-309.58(b), of the Scrap Tire Disposal Act, whole scrap tires that have pneumatic rubber coverings are banned from landfill disposal. The Solid Waste Section administers the Scrap Tire Management Program, part of which is the Scrap Tire Disposal Account (STDA) Fund. The Act requires that each county manages a scrap tire collection program to ensure the proper disposal and recycling of scrap tires within its boundaries, by contract with a permitted disposal and recycling facility or via the county itself.

The STDA Fund was created to provide each qualifying county that has incurred a program shortfall with additional funds, to provide funds for the cleanup of illegal scrap tire collection sites and dumps, and to provide funds for grants to businesses that utilize processed scrap tire materials. To fund the Act, the General Assembly imposed a 1% tax on the sale of new large tires with a bead diameter of at least 20 inches (bus, tractor-trailer, and construction equipment tires) and a 2% tax on the sale of new small tires with a bead diameter of less than 20 inches (automobile and small truck tires). The statute requires that each county provides at least one scrap tire collection site accessible to the public and businesses and that qualifying scrap tires, those generated in the normal course of business, be accepted free of charge.

Counties receive a quarterly tax distribution from DOR, seventy percent of the net tax proceeds on a per capita basis, to be used for scrap tire program operational costs. Prior to FY 2013-2014, seventeen percent of the remaining tax proceeds were allocated to the STDA Fund (the remaining 13% allocated for other DEQ purposes). However, S.L. 2013-360 (S402) eliminated the

remaining tax proceeds allocations, providing instead \$420,000 annually from the General Fund to the STDA Fund. The remaining 30% of the net tax proceeds were allocated to the General Fund.

Table V-15 shows the tax revenue collected and the distribution of the tax proceeds by DOR for FY 2024-2025.

Table V-15: Distributions of Scrap Tire Tax Revenue

Net Tax Collections by the N.C. Department of Revenue	\$28,632,694.54
Dept. of Revenue Cost of Collecting	\$400,803.98
Amount distributed to counties (70%)	\$19,762,323.41
Amount distributed to the General Fund (30%)	\$8,469,567.15

Table V-16 below provides an overview of the Scrap Tire Disposal Account Fund for FY 2024-2025

Table V-16: Scrap Tire Management Account

Balance of Funds as of July 1, 2024		\$219,581.22
Cost Overrun Grants to Counties July 2024	\$205,753.43	
Cost Overrun Grants to Counties February & March 2025	\$213,054.57	
Postage	\$0.00	
Clean Up Grants to Counties (Table 16)	\$0.00	
Total Debits		\$418,808.00
Transfer from General Fund	\$420,000.00	
Total Credits	-	\$420,000.00
Ending Balance June 30, 2025	-	\$220,773.22

In July 2025, S.L. 2025-66 (S706) “An Act to Restore Assistance to Counties with the Cleanup of Scrap Tires. Certain Municipalities,” was ratified, effective October 1, 2025. It allocates thirty percent of the net tax proceeds, previously credited to the General Fund, to the Scrap Tire Disposal Account Fund. The additional funding is to be used to provide grants to counties for program overage costs (up to 75%), for the cleanup of illegal scrap tire collection sites and dumps (up to the remaining revenue in the Account), for business development grants to encourage the use of processed scrap tire materials (up to 15%), and by the Department to administer the Act (up to \$175,000). If at the end of any fiscal year the Account exceeds \$300,000, the remaining funds shall be credited to the Highway Fund. The increase in funds available for grants to counties for program overage costs was awarded to counties beginning in January 2026. Prior to the Session Law, the STDA Fund did not have the funds to adequately compensate counties for program shortfalls and cleanups and did not have funding for business development grants and administration costs.

S.L. 2025-66 FY 2025-2026 (initial data): A total of seventy-two counties were awarded grants from the STDA Fund. Thirty-three counties received grants in July 2025 totaling \$204,711.83. The counties requested a total of \$1,575,082.35 in grants and reported that they received \$4,392,847.22 in tax proceeds from DOR during the period applicable to the grant, October 2024 through March 2025. Thirty-nine counties received grants in January 2026 totaling \$2,493,403.84. The counties requested a total of \$2,933,416.25 in grants and reported that they received \$5,406,869.20 in tax proceeds from DOR during the period applicable to the grant, April 2025 through September 2025. The effective date of the July 2025 Session Law is October 1, 2025. The initial DOR distribution of tax proceeds to the STDA Fund of \$2,378,210.54 occurred on November 17, 2025. The STDA Fund balance (as of February 10, 2026) is \$320,868.

The Division of Environmental Assistance and Customer Service (DEACS) will administer the business development grants. It is estimated that it will have approximately \$1,500,000 annually to be used for grants. DEACS launched the Scrap Tire Market Development Grant in February 2026 with applications received through March 23, 2026. Contracts are anticipated to begin in April 2026.

Prior to the Session Law, the STDA Fund did not have funding available to assist with scrap tire cleanup costs. As of February 10, 2026, there are no scheduled or active scrap tire cleanups occurring. The number of scrap tire sites across the state is unknown. It is estimated that the cost of an average large scrap tire cleanup is \$30,000 and that the Department will have at least \$400,000 annually to be used for grants. It is expected that counties will request funding for scrap tire cleanups in the coming months.

It is expected that the Department will need additional funding to implement the Program, to include administrative, technical, and conference and training costs, DEACS business grants administration costs, and support for a position to directly assist counties and the public and for staff assistance to support a position.

2. County Tire Disposal

A total of seventy-seven counties were awarded grants from the STDA Fund for FY 2024-2025. Thirty-eight counties received grants in July 2024 totaling \$205,753.44. The counties requested a total of \$1,810,477.60 in grants and reported that they received \$4,421,779.15 in tax proceeds from DOR during the period applicable to the grant, October 2023 through March 2024. Thirty-nine counties received grants in January 2025 totaling \$213,054.57. The counties requested a total of \$2,182,703.18 in grants and reported that they received \$5,157,369.33 in tax proceeds from DOR during the period applicable to the grant, April 2024 through September 2024.

In total, counties that applied for the Scrap Tire Disposal Account Fund grant during the fall and spring (a total of two grant cycles annually) reported that they collected 111,820.27 tons of scrap tires and spent \$13,538,225.80 on disposal costs and received \$9,579,148.48 from the scrap tire disposal tax proceeds. The counties requested \$3,993,180.78 in grant requests and received \$418,808.01 in grant awards. The average contract disposal cost is \$117.32 per ton. However,

individual county contract costs can vary based on tonnage collected, contract agreement, and distance from the county collection site to the disposal and recycling facility.

The FY 2024-2025 Local Government Annual Solid Waste and Materials Management Report submitted by each county in the state shows that they collected a total of 190,087.00 tons of scrap tires and spent a total of \$22,966,218.00 for scrap tire management. County reports state that they received a total of \$20,526,314.00 in revenue (tax proceeds, grants, cleanup monies, and scrap tire charges) to operate the scrap tire management programs. The average contract disposal cost per ton reported is \$155.91.

3. Tire Disposal and Recycling

In FY 2024-2025, North Carolina tire processors reported that they received 308,147.90 tons of scrap tires from North Carolina counties and from other states. Scrap tire reuse or disposal is shown in Table V-17 and Figure V-24 below. Scrap Tire Cost Overrun Grants are summarized in Table V-18 and V-19 below. Counties that applied for a grant award were awarded a percentage of that amount. The tax proceeds distributions for each grant cycle are a combination of two quarterly distributions, May and August or November and February, dispersed by the DOR. Table V-16 below shows the Illegal Tire Dump Clean-Up Costs for the fiscal year.

Table V-17: Final Disposal/Recycling of Tires (tons)

Scrap tires disposed (landfill)	114,899.00
Scrap tires used as fuel	108,704.00
Scrap tires used as crumb rubber	40,672.00
Scrap tires re-used or re-capped	11,738.00
Scrap Tires used in civil engineering	6,922.00
Scrap tires used for other purposes	18,472.90
Scrap tires used for agricultural applications	64.00
Scrap tires stockpiled - unprocessed	801
Scrap tires stockpiled - processed	5,875.00
Total scrap tires received	308,147.90

39 Counties	\$5,157,369.33	\$2,182,703.18	\$213,054.57

Table V-20. Illegal Tire Dump Clean-Up Costs

County	Check Date	Amount
None	NA	\$0.00

As shown in Table V-20 above, no funds were spent on Illegal Tire Dump cleanup costs in FY2024-25.

E. White Goods Management

1. White Goods Tax Collections and Distributions

White goods are defined in G.S. 130A-290 as: "refrigerators, ranges, water heaters, freezers, unit air conditioners, washing machines, dishwashers, clothes dryers and other similar large domestic and commercial appliances." In 1993, the General Assembly passed the Management of Discarded White Goods Act, as white goods are difficult to dispose of and contain refrigerants

particularly chlorofluorocarbons (CFCs). To fund this statute, the General Assembly imposed a \$3 tax on the sale of new white goods.

Counties are required to manage white goods by providing at least one collection site, at no cost to residents, and to arrange for the removal of refrigerants and for their recycling. The FY 2024-2025 LGAR submitted by each county shows that they collected a total of 35,136 lbs. of white goods and spent a total of \$7,205,736.00 on white goods management and recycling. The reports also state that they received a total of \$8,468,330.00 in revenue from tax proceeds and scrap metal sales and collected 16,347 lbs. of refrigerants. Most of the white goods tax proceeds collected are distributed to county governments for use in administering their Programs as shown in Table V-21.

Table V-21. White Goods Tax Collections/Distributions

Net Tax Collections by the Department of Revenue	\$8,158,415.75
Department of Revenue Cost of Collecting	[\$398,711.67]
Total Revenue Available for Distribution	\$7,759,704.08
72% of Revenue - Available for Distributions to Counties	\$5,586,986.95
Funds Forfeited from ineligible counties (Sent to the General Fund)	[\$1,453,878.58]
Total Distributed to Counties	\$4,133,108.37
Funds Forfeited from ineligible counties (Sent to the General Fund)	\$1,453,878.58
28% of Revenue - Sent to the General Fund	\$2,172,717.13
Total Sent to the General Fund	\$3,626,595.71

County governments with an undesignated ending balance exceeding 25 percent of the tax proceeds received, or would have received if eligible, during the preceding fiscal year and those counties that failed to submit the Annual Financial Information Report (AFIR) demonstrating their eligibility are ineligible to receive white goods tax proceeds. The forfeited funds are transferred to the N.C. General Fund.

Prior to July 1, 2017, counties could apply for grants from the White Goods Disposal Account for white goods program cost overages, white goods cleanup costs, and white goods-related capital improvements. The White Goods Disposal Account was repealed effective June 30, 2017.

Tables V-22 and V-23 below list the counties ineligible to receive white goods tax proceeds distributions per quarter for FY 2024-2025 (August 2024, November 2024, February 2025, and May 2025).

F. Abandoned Manufactured Homes (AMH) Program

As established in G.S. 130A-309.111, DEACS operated a grant program that provided a portion of DWM's annually appropriated grant funding to North Carolina counties to facilitate the identification, deconstruction, recycling, and disposal of abandoned manufactured homes which are deemed unfit, unsafe, and hazardous. The Abandoned Manufactured Homes (AMH) Grant Program Request for Proposals (RFP) was originally developed and made available to North Carolina counties in October 2009. On Oct. 1, 2023, the legislation authorizing the AMH program expired, making the FY 2022-23 grant round the final set of funding awarded under this program. During FY 2024-25, DEACS still had four remaining AMH grants under contract with projects underway. Activities from these grants are detailed below, and DEACS will continue to report on the remaining active grants until all are completed.

1. AMH Grants Awarded by Fiscal Year

Table V-24 shows the number of grants awarded during each of the 15 years of the program's operation and funding allocated to those grants.

Table V-24 AMH Grants Awarded by Year

Fiscal Year	Number of AMH Grants Awarded	Grant Funds Allocated
FY 2009-10	10	\$385,000
FY 2010-11	3	\$105,000
FY 2011-12	4	\$150,000
FY 2012-13	3	\$117,500
FY 2013-14	4	\$80,000
FY 2014-15	3	\$74,500
FY 2015-16	6	\$69,000
FY 2016-17	4	\$35,000
FY 2017-18	5	\$49,000
FY 2018-19	0	\$0
FY 2019-20	8	\$100,000
FY 2020-21	3	\$32,000
FY 2021-22	4	\$40,000
FY 2022-23	3	\$51,000

2. AMH Program Statistics

As required by G.S. 130A-309.117, each AMH grant program participant submits an annual report to the State every August that documents and summarizes county program information from the previous fiscal year. Based on the August 2025 grantee reports, Table V-25 below shows the total number of AMH units deconstructed under the program and the resulting amount of waste disposed of and materials recycled in FY 2024-25, including mercury thermostats, which are required to be removed before disposal. Program statistics do not include deconstruction activities conducted in counties without State grant support.

Table V-25 AMH Units Deconstructed in FY 2024-25

Statistics of AMH Program for FY 2024-25	
Units Deconstructed	3 Units
Materials Landfilled	7.0 Tons
Materials Recycled (percentage of total tonnage)	4.1 Tons (36%)
Mercury Thermostats Recovered	2 Thermostats

During FY 2024-25, there were four remaining active AMH program grants. The number of units deconstructed during this fiscal year decreased compared to the previous fiscal year, from 9 units to 3 units. Thus, the tons of materials landfilled from FY 2023-24 to FY 2024-25 decreased from

58.7 tons to 7.0 tons. Total recycled materials also decreased from 11.3 tons to 4.1 tons. The overall percentage of materials recycled increased from 16 percent in FY 2023-24 to 36 percent in FY 2024-25. This increase can be attributed to the small number of units managed during this fiscal year. Two thermostats from Ashe County were recovered during FY 2024-25. Table V-26 presents the individual AMH grants that were active during FY 2024-25 and provide details from those programs.

Table V-26 Active AMH Grant Program Participants During FY 2024-25

County	Contract Start Date	Contract End Date	Grant Award	County Costs during FY	Responsible Party Fees Collected	# Units Deconstructed with Grant Support during FY
Ashe	6/1/2022	12/1/2024	\$15,000	\$6,500	\$6,190	2
Iredell	7/1/2023	6/30/2026	\$16,000	\$3,846	\$2,200	1
Jones	3/1/2023	3/1/2026	\$15,000	\$0	\$0	0
Warren	3/5/2020	2/28/2025	\$10,000	\$0	\$0	0

3. Program Participant Highlights in FY 2024-25

The total expenditure by counties associated with the AMH grants in FY 2024-25 was \$10,346. This expenditure is lower than the previous year due in part to fewer units being demolished compared to the previous year. The total amount of funds contributed by responsible parties in FY 2024-25 was \$8,390, which is slightly down from the previous fiscal year. As shown in Table V-26, Ashe and Iredell accounted for all the responsible party fees collected and this reflects these grants getting work underway after coming into place in this fiscal year.

4. Additional Information on the AMH Program

An examination of the fiscal year county reports submitted by grantees showed that there were significant delays and slow progress due to employment instability in county governments and higher costs of demolition. Hurricane Helene impacts severely affected the ability for Ashe County to address more units. These challenges also made it difficult for counties to find AMH homeowners and landowners willing to participate in the program. DEACS will continue to work with the grantees as needed to assess the impact of these issues and to assist as practicable, including grant extensions.

While the authorizing legislation for the AMH program expired on Oct. 1, 2023, DEACS will continue to report on the progress and results of the remaining active grants in subsequent reports until all are completed.

G. Electronics Management Program

G.S. 130A-309.130 established the Electronics Management Program. The program directs manufacturers of electronics, retailers, consumers, and state and local governments to share accountability for the responsible recycling and reuse of electronic equipment. The law applies to computer equipment and televisions intended primarily for consumer use. Computer equipment includes computers, tablets, gaming systems, monitors, video display units, printers, scanners, combination printer-scanner fax machines, and other peripherals (except for keyboards and mice). Items such as mobile telephones, video recorders, cable, and satellite boxes, and all commercial devices such as printers and data-networking systems are not covered devices under the law.

1. Manufacturers' Responsibilities

Before selling computer equipment and televisions in North Carolina, manufacturers must register with the State and pay a registration fee, which is dependent upon the type of equipment manufactured and, for computer equipment, a recycling plan (level I, II or III) is required.

Television and computer equipment manufacturers have different recycling obligations under the law. Television manufacturers are assigned an annual target weight by DWM to recycle based on their market share. Computer equipment manufacturers are required to have a plan in place to make the recycling of computers available to consumers. The law is designed to provide electronics recycling opportunities for the consumer, which is defined as an occupant of a dwelling who used the equipment primarily for personal or home business use. A nonprofit organization with fewer than 10 employees is also considered a consumer.

Television manufacturers pay an initial fee of \$2,500 plus an annual fee of \$2,500. Each television manufacturer is obligated to recycle or arrange for the recycling of its market share of televisions and must annually report the weight of televisions they recycled or arranged to recycle for the previous fiscal year.

Computer equipment manufacturers' responsibility:

- Pay an initial registration fee of \$10,000 to \$15,000, followed by an annual registration fee of \$2,500 to \$15,000, depending on the level of recycling plan chosen.
- Computer equipment manufacturers must provide a plan, through which consumers are provided free and reasonably convenient recycling.
- Recycling and transportation must be accomplished using environmentally sound management practices.
- Manufacturers must provide consumer recycling education and a toll-free phone number.
- Each registered computer equipment manufacturer must also submit an annual report detailing the total weight of computer equipment collected for recycling and reuse for the previous fiscal year, summarizing the actions implemented from the approved plan.

2. Retailer's Responsibilities

Retailers in North Carolina may only sell computer equipment and televisions that display the manufacturer label of a registered manufacturer in compliance with the electronics management law.

3. State Agencies and Governmental Entities Responsibilities

State agencies and governmental entities in North Carolina may only purchase computer equipment and televisions that are produced by registered manufacturers in compliance with the electronics management law. A list of manufacturers that are compliant can be viewed at: <https://edocs.deq.nc.gov/WasteManagement/DocView.aspx?id=1390200&dbid=0&repo=WasteManagement> for computer equipment and <https://edocs.deq.nc.gov/WasteManagement/DocView.aspx?id=1390199&dbid=0&repo=WasteManagement> for televisions.

4. Registration of Facilities Recovering or Recycling Electronics

Facilities that recover or recycle covered devices or other electronic devices diverted from the waste stream for transfer, treatment, or processing must register annually with the Department on or before August 1 each year.

5. Recycling Rates Within North Carolina

Data for the recycling of computer equipment and televisions comes from two primary sources: manufacturer reports and Local Government Annual Reports (LGAR). Table V-27 below shows information reported by manufacturers registered with the state.

Table V-27: Electronics Collection by Weight

Type of Collection	CE MFRs [lbs.]	CE MFRs [tons]	TV MFRs [lbs.]	TV MFRs [tons]
Manufacturer: mail back, sponsored [retailer, thrift store, collection event], and dedicated location at local government sites	1,438,054.00	719.03	14,421,860.00	7,210.93

Drop-off operations can be at local government locations and via manufacturer-sponsored sites, such as retailers, thrift stores, and temporary collection events. Mail-back programs are an important option for rural areas with fewer drop-off locations available, although, the weight collected through this collection method continues to be relatively small.

Table V-28 shows the recycling of electronics collected by county and municipal collection programs by fiscal year.

Table V-28: Electronics Collected (Tons) by County and Municipal Collection Programs by Fiscal Year

County and Municipal Collection Programs	Televisions	Computer Equipment**	Other Electronics	Total
FY 2012-13	8,739.47		5,420.05	14,159.52
FY 2013-14	9,314.94		5,471.00	14,785.93
FY 2014-15	10,025.66		5,050.77	15,076.44
FY 2015-16	12,057.66		4,623.86	16,681.52
FY 2016-17	11,137.81		4,656.75	15,794.56
FY 2017-18*	9,833.78		3,519.09	13,352.87
FY 2018-19	9,912.60		3,531.48	13,444.07
FY 2019-20	7,742.63	1,145.35	2,847.79	11,735.77
FY 2020-21	6,847.92	1,121.02	2,655.35	10,624.28
FY 2021-22	5,613.34	1,235.70	2,058.54	8,907.58
FY 2022-23	4,893.95	1,952.24	1,325.46	8,171.65
FY 2023-24	5,080.37	1,926.98	1,165.81	8,173.16
FY 2024-25	4,558.50	1,095.62	2,136.31	7,790.43

*A correction was made to the FY 2017-18 local government television and other electronics tons in the FY 2018-19 report.

** Local governments were asked for the first time in FY 2019-20 to report computer equipment separately. In previous years, computer equipment has been combined with other electronics.

6. Compliance and Enforcement of Electronics Laws

Manufacturers that have not paid their annual fees or submitted required documentation are ineligible to market their products in North Carolina. Residents and government agencies can check the DWM website <https://www.deq.nc.gov/about/divisions/waste-management/solid-waste-section/special-wastes-and-alternative-handling/electronics-management#QuickLinks-11327> to determine which companies may sell in North Carolina.

DWM and DEACS have been coordinating with manufacturer stakeholder groups, as well as a national consortium of states with electronics programs via the Electronics Recycling Coordination Clearinghouse (ERCC), to seek ways to streamline and automate reporting requirements for North Carolina. Manufacturer reporting requirements vary greatly from state to state. North Carolina has joined with other states in allowing manufacturers to register via web access at: <https://ecycleregistration.org/>.

7. Electronics Management Fund

The Electronics Management Fund, administered by DWM, is funded by computer equipment and television manufacturers' initial registration and annual fees. Fees paid into the electronics management fund are used to support approved electronics management programs within the state. Table V-29 reflects the fund's balance and payout for FY 2024-2025.

Table V-29 Electronics Management Fund

Balance of Funds as of July 1, 2024		\$582,224.57
Debits		
February 2024 Distributions to Local Government Programs	\$486,000.00	
ERCC Membership and participation in eCycle Registration and Cost of TV Market Share Data	\$13,767.18	
Administrative and Salary Costs	\$95,567.61	
Total Debits		\$595,334.79
Credits		
Computer Equipment Manufacturer Fees	\$547,515.00	
Television Manufacturer Fees	\$3,909.80	
Total Credits		\$551,424.80
Ending Balance June 30, 2025		\$538,314.58

Note: Electronic Management Fund monies used for annual February Fund distributions is based on manufacturer FY payments received, minus administrative costs, throughout the preceding calendar year (January 1 through December 31).

Types of Equipment Recovered by Local Programs Based on information reported from local governments in FY 2024-25, the full cost of electronics recycling through local government

programs is estimated to be approximately \$0.31 per person. Local governments can become eligible for funds by implementing an electronics management plan, submitting the plan and required plan elements as a Fund application, and using an electronics recycler/vendor that holds the e-Stewards or R2 certification. Although costs to operate local government programs vary significantly, the calendar year 2025 fund monies distributed covered approximately 17% of the estimated costs to operate programs that made themselves eligible to receive funds.

Because of consolidation among electronics manufacturers and an increasing number of computer manufacturers choosing to register with a Level II plan, the distribution amounts may vary in the future.

Units of local government electronics collection programs are required to demonstrate, via the Electronics Management Fund annual application, that computer equipment and television recycling has been conducted by R2 or e-Steward-certified facilities during the previous fiscal year to receive Fund distributions. The funding must be used only for the management of electronics. The 57 local governments with approved electronics management fund applications received a total of \$486,000 in distributions from the Electronics Management Fund in February 2025. The list of local governments that received funds is shown in Table V-30 below.

Table V-30 Electronics Management - Distribution February 2025

Unit of Local Government	Fund Amount
Alamance	6,798.28
Alexander	2,842.31

H. Additional Documentation from the N.C. Department of Administration and Department of Transportation

Please refer to these links for reports from the N.C. Department of Administration and Department of Transportation that summarize the environmental and resource conservation programs provided by those agencies.

The N.C. Department of Administration promotes the purchase and use of sustainable, efficient supplies and products. As the department progresses with this effort, more of those types of products are being added to statewide term contracts and agency-specific term contracts awarded through open market bids. For more information, visit the Division of Purchase and Contract's website at: <https://ncadmin.nc.gov/about-doa/divisions/purchase-contract>.

G.S. 136-28.8(g) and G.S. 130A-309.14(3) mandate that the N.C. Department of Transportation prepares an annual report on the amounts and types of recycled materials specified or used in construction and maintenance projects during the previous State fiscal year and review of bid procedures, respectively. The types of recycled materials incorporated into the report would routinely contribute to the consumer and industrial waste streams, compounding the problem of declining space in landfills.

Chapter VI: Utility-Scale Solar Project Decommissioning

A. Executive Summary

S.L. 2023-58, s. 2 (H130) effective June 26, 2023, enacted a new Part within Article 9 of Chapter 130A of the N.C. General Statutes: Part 2J “Management of Solar Energy Equipment” (G.S. 130A-309.240 through 130A-309.243). The Session Law also revised G.S. 130A-309.06(c) to require DEQ to annually report to the General Assembly on the management of solar energy equipment for utility-scale solar project decommissioning pursuant to Part 2J.

B. Program Background

S.L. 2023-58 made DEQ the lead agency in the statewide administration and enforcement of utility-scale solar project registration, decommissioning, and a financial assurance program for new projects, and for enforcing the new state-level statutory registration and decommissioning requirements for existing utility-scale solar projects. The Session Law requires the owner of a utility-scale solar project capable of generating two (2) or more megawatts (MW) alternating current (AC) that is directly connected to the electrical grid to:

- Properly decommission the project upon cessation of operations and restore the property.
- Register with DEQ and pay a fee.
- Submit a decommissioning plan and establish financial assurance for new and rebuilt/expanded utility-scale solar projects.

To administer Part 2J of Article 9, DEQ has created a new program within DWM, the Utility-Scale Solar Project Decommissioning Program. As a part of establishing the new program, DWM has created a new webpage that provides information and updates about the program and the requirements of Part 2J. This webpage can be accessed on the DWM’s website at: <https://www.deq.nc.gov/about/divisions/waste-management/utility-scale-solar-management-program>.

Sections 2. (c) and (d) of the Session Law also required DEQ to adopt rules and submit quarterly reports to the Environmental Review Commission and the Joint Legislative Commission on Energy Policy on the implementation of the requirements of S.L. 2023-58, s. 2, including program development and the status of the Department’s rulemaking efforts.

Additional background, data, and information pertaining to the requirements in S.L. 2023-58 can be reviewed in the following legislation and the associated reports/plans submitted to the General Assembly as required in the respective legislation:

- [S.L. 2019-132 \(H329\)](#): The Environmental Management Commission and DEQ evaluated the end-of-life management of renewable energy equipment and summarized the evaluation in the January 1, 2021 "[Final Report on the Activities Conducted to Establish a Regulatory Program for the Management and Decommissioning of Renewable Energy Equipment](#)."
- [S.L. 2021-165 \(H951\)](#): DEQ evaluated options for the decommissioning of utility-scale solar projects and financial assurance and summarized the evaluation in the March 1,

2022 “[Plan and Recommendations for Financial Resources for Decommissioning of Utility-Scale Solar Panel Projects](#).”

- [S.L. 2023-137 \(H600\)](#), s. 19.(a): Bans photovoltaic modules from disposal in unlined landfills.

C. Program Activity

This report provides information on the activities conducted to develop and establish the new program within DWM in FY 2024-25, including the development of rules and the registration platform leading up to the requirements of G.S. 130A-309.240 becoming effective in FY 2025-26.

The rules for the program, 15A NCAC 01V *Decommissioning and Financial Assurance Requirements for Utility-Scale Solar Projects*, became effective April 1, 2025. The rules provide clarification and further detail for the requirements in G.S. 130A-309.240, including applicability and additional definitions, registration and fee requirements and amounts, decommissioning cost estimate requirements, and financial assurance requirements and mechanisms. Quarterly reports were submitted to the Environmental Review Commission and the Joint Legislative Commission on Energy Policy December 1, 2023, through December 1, 2025.

DWM also worked with the Department of Information Technology to develop an all-in-one electronic/online platform solution for the registration form and review process, the database for site inventory, invoicing and payment of the registration fees, and the five-year registration updates, which can be accessed at this link: <https://ncdeq.dynamics365portals.us/wm-sp-home/>. The platform was live on August 4, 2025, and allows project owners to create an account where they can do the following:

- register all of their utility-scale solar projects,
- upload copies of decommissioning plans and financial assurance mechanism documents, as applicable, and
- view and pay invoices for the registration fee.

DWM issued a memo on the same date notifying utility-scale solar project owners of the registration requirements. The memo, which can also be found on the program’s webpage, included links to the program webpage, guidance documents, and the registration and fee payment platform.

592 Sites Identified					540 Sites Certified			

DSCA Site Status Definitions

Petitioned:	The DSCA Program has received a petition to enter the program and is in the process of completing the required paperwork.
Certified:	The DSCA Program has entered into an agreement with a petitioner and is in the process of assigning a state-hired, independent environmental contractor to conduct a prioritization assessment.
Assessment:	The DSCA Program's independent environmental contractor is determining the extent of soil and groundwater contamination at the site.
Monitoring:	The DSCA Program's independent environmental contractor is monitoring the levels of contaminants in the groundwater at the site.
Remediation:	The DSCA Program's independent environmental contractor is performing cleanup at the site.
Interim Action:	Site conditions are favorable for source removal or for conducting a pilot study for remediation.
Emergency:	The DSCA Program has determined there is an immediate need for corrective action to abate a potential hazard to human health or the environment.
On Hold:	Please contact the site's project manager for more details.
Closure:	The extent of contamination is defined and considered stable. The DSCA Program is developing and implementing a risk management plan to protect human health and the environment from remaining contamination.
NFA:	No Further Action Required

Appendix D

Inactive Hazardous Sites Inventory – Site Status

Appendix D. Inactive Hazardous Sites Inventory by County and Site Status

Note: Upon discovery, sites are added to the Evaluations Pending or Non-Hazardous (Non-Haz) Site categories of the Inactive Hazardous Sites Inventory. As staff resources are available, the sites are ranked according to their risk to human health and the environment and transferred to the Sites Priority List (SPL). The SPL is used to prioritize remedial actions at the higher risk sites lacking responsible parties, using State funds when available. If a party volunteers to clean up a site and enters into an Administrative Agreement (AA) with the Division, the site is then removed from the SPL and transferred to the Voluntary Action category. Once cleanup is complete, the site is transferred to a No Further Action (NFA) category. Information on contaminants and contaminated media for sites on the SPL is presented in Appendix C.

Calculated Values:

Average Tons = (Total Tons Received) / (Years Open)

Compaction Density = (Total Tons) / (Volume Used)

Remaining Volume for Future Construction = (Volume Constructed) - (Volume Used)

Remaining Permitted Volume = (Volume Overall) - (Volume Used)

Approximate Constructed Remaining in Tons = (Volume Cosntructed Remaining) x (Compaction Density)

Approximate Constructed Remaining in Years = (Volume Constructed Remaining in Tons) / (Average Tons)

Remaining Constructed in Fiscal Year Tons = (Volume Constructed Remaining in Tons) / (Fiscal Year Tons)

Approximate Total Permitted Volume Remaining in Tons = (Volume Overall Remaining) x (Compa

Approximate Total Permitted Volume Remaining in Years = (Volume Overall Remaining in Tons) / (Average Tons)

Approximate Total Tonnage Remaining in Fiscal Year Tons = (Volume Overall Remaining in Tons) / (Fiscal Year Tons)

Number of Reports: 102

Note:

The data for these calculations are collected from Annual Facility Reports.

The calculations are based on historic tonnage and compaction density data. The approximations may be affected by changes in operations, waste stream characteristics or growth.

Recycling and Solid Waste Management Report for Highway Construction, Maintenance Projects, and Office Products

INTRODUCTION

This report is a summary of the recycling and solid waste management efforts on highway construction and maintenance projects within the North Carolina Department of Transportation (NCDOT) for State Fiscal Year (FY) 2025 (July 1, 2024 - June 30, 2025) as required by NC General Statute (G.S.) 136-28.8(g) and G.S. 130A-309.14(3). These statutes mandate that the Department prepare an annual report on the amounts and types of recycled materials specified or used in construction and maintenance projects during the previous state fiscal year and review of bid procedures, respectively. The types of recycled materials incorporated into this report would routinely contribute to the consumer and industrial waste streams if not reused/recycled, compounding the problem of declining space in landfills, and resources.

Efforts to utilize recycled and solid waste materials are in response to the requirements of G.S. 136-28.8(b) which mandates the Department use recycled materials in highway projects, where possible. All applications of recycled materials are to be consistent with economic feasibility, applicable engineering, and environmental quality standards. In addition, the Department continues to comply with Chapter 136 of the General Statutes to encourage the purchase or use of reusable, refillable, repairable, more durable, and less toxic supplies, and products.

In addition to recycled/recyclable materials from Department construction and maintenance activities, this report also contains information regarding common recyclable items such as glass, plastics, aluminum cans, office paper, etc. that were previously reported separately. Requirements for the submission of this office and rest area data are required by G.S. 130A-309.07 through 309.14, G.S. 143-58.2(f), and Executive Order 156.

BID PROCEDURE REVIEW

The Department continues to review bidding procedures and processes yearly to encourage the purchase and use of recycled and reusable products and practices in construction and maintenance projects. Section 104-13 of the NCDOT Standard Specifications for Roads and Structures encourages Contractors to not only use recycled or solid waste materials in their projects but also allows them the opportunity to initiate and develop the use of recycled products and construction methods that promote sustainability. Furthermore, the contractor is required to report the use of recycled materials by July 1st each year.

DATA COLLECTION

All offices submitted data for this report via an online webform. The online [webform](#) is separated into two sections, one for the “construction and maintenance” data, and one for “DOT/DMV Offices and Rest Areas” data (formerly the “3R Report”).

The totality of data included in this report comes from three separate sources:

1. HiCAMS (Highway Construction and Materials System) database,
2. Various NCDOT Offices (entered in a SharePoint form), and
3. NCDOT Roadside Environmental Unit’s Litter Cleanup Programs

The data reported in Table 1 from HiCAMS is denoted by an asterisk (*). HiCAMS is NCDOT’s main repository of project and material level information. The HiCAMS information, however, is not conclusive, as many county maintenance project materials are not included. NCDOT Standard Specification Section 104-13 states that contractors are to report the quantities of reused or recycled materials for each contract and any practice that minimized the environmental impacts by July 1st each year, but the reporting response rate remains low.

The data reported in Table 1 are all rounded down to the nearest whole number for each item. Several important points regarding data collection need to be made for clarification and consistency purposes:

1. Reclaimed Asphalt Pavement (RAP) quantities and Reclaimed Asphalt Shingles (RAS) quantities are being reported as one item. This is necessary since changes were made to NCDOT’s HiCAMS database that now require the combined reporting of these two constituents.
2. The glass beads (Section 5) contained in pavement markings can come from recycled sources, however the exact percentage and quantity is not completely known. Therefore, the entire quantity of glass beads is currently listed as a recycled/recyclable product.
3. The Plastics section (Section 6) includes products that contain recycled components and products that could be recycled in the future. The plastic pipe component is composed of all dimensions and compositions of plastic pipe. The exact amount of recycled plastic and recyclable plastic cannot be determined given the limited amount of data present. Therefore, all plastic pipe types and sizes were combined in a single category.
4. The Metals section (Section 8) is presumed to be composed of steel. However, various grades and types of steels are included, and our office cannot verify that this section does not include other metals such as Aluminum. Furthermore, the materials listed do not specify a recycled content amount. The materials are included as a product that will be, or could be recycled in the future, and one that contains an unknown quantity of recycled metals presently. It is therefore included as both a recyclable product and a recycled product.

5. Scrap metal is listed as one line item in Section 8; some of the scraps are presumed to be recycled guardrail, sheet piles, and pipes, but their individual quantities cannot be determined at this time.

Table 1: NCDOT Recycled Products & Solid Waste Utilization in Construction & Maintenance Projects

Product Category / Description	Quantity	Unit of Measure
1-Asphalt:		
Reclaimed Asphalt Pavement (RAP)	1,833,583*	Tons
Reclaimed Asphalt Shingles (RAS)		
2-Organics:		
Mulch (wood)	192	Cubic Yards
Mulch (hydromulch)	8,000	Bales
Earth/Soil Fill (not for compost)	11,770	Tons
Compost Material	15	Cubic Yards
Silt Fence Posts	735	Each
Scrap Wood/Lumber/Piles/Posts	148	Tons
Wood Pallets	2	Tons
Sign Posts	9,230	Each
3-Coal Combustion Products:		
Fly Ash	21,853*	Tons
4-Concrete:		
Recycled Concrete	103,708	Tons
5-Glass:		
Glass Beads	9,154*	Tons
6-Plastics:		
Plastic Guardrail Offset Blocks	308,531*	Each
Plastic Pipe (All Types and Sizes)	824,589*	Linear Feet
Type III Barricades	37,764*	Linear Feet
7-Rubber:		
Tire Sidewalls	5,795	Each
Miscellaneous Rubber	0	Tons
8-Metals:		
Steel Beams	83	Each

Signal Heads	618	Each
Scrap Metal	1,126	Tons
Cable Guiderail	1,181,641*	Linear Feet
Guardrail	444,015^	Linear Feet
Signposts	10,965	Each
Signs	22	Tons
Sheet Piles	25	Tons
9-Other:		
Commingled Items	105	Tons

(*) Data pulled from HiCAMS as of 9/22/2025

(^) Data pulled from HiCAMS and combined with data reported by NCDOT field offices on 9/22/25

The data reported in Table 2 are all rounded down to the nearest whole number for each item. Several offices and rest areas report their recycling report data as commingled recycling. As such, it is not possible to determine the quantities of each constituent material, and therefore a “commingled” product line is listed in Table 2.

Table 2: NCDOT Recycled Materials from NCDOT Offices and Rest Areas
(formerly the “3R Report” data)

Product Category	Quantity	Unit of Measure
Office Paper	97,520	Pounds
Aluminum Cans	20,583	Pounds
Plastic - Soda/Drink Bottles	17,328	Pounds
Plastic - Other than Bottles	2,327	Pounds
Glass Bottles	19,755	Pounds
Cardboard	68,043	Pounds
Fluorescent Light Bulbs	336	Each
Appliances (Various)	81	Each
Toner Cartridges	594	Each
Petroleum Products	16,693	Gallons
Pesticide Containers	8,974	Each
Batteries	66,985	Pounds
Commingled Recycling	23,055	Pounds

The total weight of office and rest area recycling is 315,596 pounds. This total does not include items for which the unit of measure for a recycled item was listed as each or gallon.

Table 3 contains the reported recycling data from the NCDOT Roadside Environmental Unit's various litter cleanup programs.

Table 3: Comingled Recycling from NCDOT Roadside Environmental Unit's Litter Cleanup Programs

REU Program	Quantity (lbs.)
Adopt-A-Highway	92,190
Contracted Removal	391,050
NCDOT Personnel	12,285
Sponsor-A-Highway	206,895
Other	2,565
Total	704,985

Appendix Q

Department of Administration Environmentally Preferred Purchasing

Table 1: Statewide Term Contract Sustainable Attributes

STC#	Statewide Term Contract	Sustainable Attributes
0003A	Products and Supplies for Correctional Facilities	20%-50% Post-Consumer Recycled Content, 100% Recycled Content. Plastic, cotton materials, and rubber soles
070G	Utility, Transportation & Golf Vehicles & Related Accessories, Equipment, Parts and Services	Assortment of electric vehicles, all of which are quiet and release no emissions
1017A	Agricultural Chemicals	Items use recyclable containers, some of which are reusable or refillable. Packaging material such as corrugated boxes is also suitable for recycling. The manufacturing industry is heavily regulated, and these manufacturers also include sustainability efforts on their websites and marketing information.
1214A	Gases: Medical, Welding & Specialty	Recyclable tanks, hoses, and brass
1411B	Sanitary Paper Supplies	Offers selections that contain 20%- 50% Post-Consumer Recycled Content or 100% Recycled Content. Some products are Green Seal Certified, EPA Compliant, and Chlorine Free
1412A	Office Paper	Offers selections that contain 20%-50% Post-Consumer Recycled Content, 100% Recycled Content
1510A	Motor Fleet Fuel Credit Card	Vendor supports government fleets in sustainability by allowing charges at EV charging sites and provides reporting on EV usage alongside traditional liquid fueling, giving a full view of usage
2324A	Lathe & Metalworking Machines	Various recyclable components, such as metal, glass, stainless steel, aluminum, and brass materials are used
2410A	Vehicle Lifts and Garage Associate Equipment	Various recyclable components, such as metal, glass, stainless steel, aluminum, rubber, and other materials are used

2510A	Fleet Vehicles (All Types)	Various recyclable components, metal, glass, wood trim, stainless steel, rubber, vinyl, aluminum, and brass materials are used in the available options
2517A	Tires and Tire Services (All Types)	75% total recycled/renewable materials
2611A	Storage Batteries	99% of the content in lead-acid batteries are recyclable
2613A	Electric Vehicle Charging Station Equipment, Accessories, Installation and Infrastructure	Offers solar charging stations
2711A	Professional Grade Tools and Diagnostic Equipment	Steel products contain 20-30% of post-consumer waste

2711B	Maintenance, Repair and Operation (MRO) Supplies and Equipment	Various recyclable content from wood, steel, PVC, rubber hoses, glass, and aluminum
2714A	Walk-in Building Supplies	Various recyclable content from wood, steel, PVC, rubber hoses, glass, and aluminum.
3016A	Floor Covering & Installation Services	Recycled or recyclable content is required for the carpet covered within the nylon carpet specification
3121A	Interior, Exterior and Traffic Paint	Interior paints are fume-proof (non-toxic)

4213A	Medical Products Distribution	Lamps may contain up to 65% recycled content, including glass and mercury. Lamp packaging that may contain 73% recycled content. Some of the lamps are low mercury (TCLP-compliant) and non-hazardous. Low flow plumbing fixtures are offered to reduce water consumption. Ballasts - electronic types are available that are up to 30% more energy efficient, last longer, support variable illumination, and reduce electromagnetic radiation compared to the older magnetic ones. Electronic ballasts contain no PCBs and can be disposed of in the trash. Reduced product shape and size also minimize packaging and metal enclosure requirements. LED Lighting- Contract consists of lamps for cove lighting, area lighting, downlights, troffers, and wall packs employing LED illumination for energy savings. Packaging is 60% recycled materials. LED illumination uses 80% less energy than incandescent bulbs and lasts up to 25 times longer. Energy Saving Devices - Contract includes T8 size tubular fluorescent retrofit kits, LED exit signs, LED exit sign retrofit kits, occupancy/vacancy sensors, electronic dimmable ballasts, and controls. Products use LED illumination and dimmable ballasts for energy savings. T8 fluorescent lighting provides higher energy efficiency and less heat generation than older T12 lighting.
4217A	Automated External Defibrillators (AED) & Accessories	Defibrillators can be refurbished, and packaging materials can be recycled
4412A	Office Supplies	Offers selections that contain 20%-50% Post-Consumer Recycled Content, 100% Recycled Content of paper, plastic, and recycled pens.
4616A	Traffic Control Devices & Accessories	Various recyclable components, metal, and brass materials are used in the available options.
4617A	Locking Devices & Accessories	Various recyclable components, metal, and brass materials are used in the available options.
5213A	Window Coverings & Installation	Options use renewable materials with low chemicals and particle emissions. Aluminum, steel, and plastic components are 100% recyclable. All packing materials are 100% recyclable
5214A	Kitchen Equipment	Various recyclable components, metal, glass, aluminum and brass materials are used in the options available.

5313A	Personal Hygiene, Grooming Equipment and Supplies	20%-50% Post-Consumer Recycled Content, 100% Recycled Content. Plastic, cotton materials, and rubber soles.
5610A	Furniture	Wood products contain up to 35% of pre-consumer waste. Steel products contain 30-40% of post-consumer waste. Corrugated containers contain recycled fiber and 100% total recycled content and 90% post consumer content. Plastic 35% of pre-consumer waste,
6010A	Manikins, Accessories, Software & Services	Options composed of various recyclable components
7612A	Document Destruction Services	All shredded materials are recyclable and incorporated into other products
7612B	Recycling Services for Electronic Equipment	Recycle service for the collection, de-manufacturing, and recycling of computer monitors, televisions, desktop CPUs, laptop computers, printers, scanners, keyboards, and mice, copy machines, tablets, DVD players, VCRs, stereo systems, tape players, CD players, radios, telephones, cell phones, readers, network equipment, servers, fax machines, electronic games, cable and wire, batteries, and other consumer electronics generated by agencies
7811C	Type C (Conventional) School & Activity Buses	Electric bus options provided
880A	Audio Visual and Photographic Equipment and Accessories	Options include recycled products and are refurbishable
946A	Procurement Card	The physical cards are made from recyclable materials and are recyclable
983A	Equipment Rental	Various recyclable components, metal, glass, stainless steel, aluminum, rubber, and metal materials are used.
983B	Uniform Rental	Options of uniform styles made from ecofriendly/sustainable materials and the rental of uniforms reduces waste

The NC eProcurement - Buying module displays 75 STC vendor catalog items within the application for a user-friendly experience similar to online shopping. During FY 2025, there were 822,259 catalog items, of which 95,819 were environmentally preferable products marked as "Recycled" to promote use. Table 2 contains the purchase order spend for the STCs noted in Table 1. Table 3 captures non-STC purchases designated as recyclable or sustainable by user selected indicator.

Table 2: FY25 Purchase Order Spend of Sustainable Statewide Term Contracts

Statewide Term Contract	Purchase Order Count	Purchase Order Spend
003A Products and Supplies for Correctional Facilities	2	\$1,077.38
070G Utility, Transportation & Golf Vehicles & Related Accessories, Equipment, Parts & Services	36	\$277,918.88
1017A Agricultural Chemicals	46	\$451,377.37
1214A Gases: Medical, Welding & Specialty	416	\$1,198,065.18
1411B Sanitary Paper Supplies	623	\$3,822,916.47
1412A Office Paper	447	\$1,649,854.22
1510A Motor Fleet Fuel Credit Card	58	\$11,183,391.05
2324A Lathe & Metalworking Machines	36	\$1,985,611.01
2410A Vehicle Lifts and Garage Associate Equipment	28	\$708,060.77
2510A Fleet Vehicles (All Types)	290	\$64,588,436.92
2517A Tires and Tire Services (All Types)	351	\$1,630,446.59
2611A Storage Batteries	105	\$398,958.97
2613A Electric Vehicle Charging Station Equipment, Accessories, Installation and Infrastructure	4	\$378,933.13
2711A Professional Grade Tools and Diagnostic Equipment	113	\$1,481,351.38
2711B Maintenance, Repair, and Operation (MRO) Supplies and Equipment	12110	\$20,100,320.10
2714A Walk-in Building Supplies	249	\$210,928.78
3016A Floor Covering and Installation Services	188	\$3,614,954.87
3121A Interior, Exterior, and Traffic Paint	81	\$128,120.92
4213A Medical Products Distribution	2675	\$11,325,113.42
4217A Automated External Defibrillators (AEDs) & Accessories	71	\$976,030.41
4412A Office Supplies	9123	\$6,180,975.87
4616A Traffic Control Devices & Accessories	53	\$1,469,503.10
4617A Locking Devices & Accessories	184	\$683,353.66
5213A Window Coverings & Installation	78	\$166,936.98
5214A Kitchen Equipment	202	\$1,345,404.12
5313A Personal Hygiene, Grooming Equipment and Supplies	19	\$206,004.44
5610A Furniture	928	\$15,914,089.76
6010A Manikins, Accessories and Services	237	\$5,284,639.69
7612A Document Destruction Services	62	\$261,534.48
7612B Recycling Services for Electronic Equipment	4	\$2,443.88
7811C Type C (Conventional) School & Activity Buses	3	\$1,442,734.00
880A Audio Visual and Photographic Equipment and Accessories	643	\$5,631,488.50
946A Procurement Card	4	\$1,258,819.12

983A Equipment Rental	116	\$1,197,339.57
983B Uniform Rental	119	\$707,210.69
Grand Total	29,704	\$167,864,345.68

Table 3 - Non-STC Purchases Designated Sustainable by Entity Type

Entity Type	Purchase Order Count	Purchase Order Spend
Community Colleges	66	\$59,558.42
State Agencies	6	\$2,274.94
Grand Total	72	\$61,833.36

Oversight Agency Procurement Initiative

During agency open market, formal or informal procurements, P&C encourages state agencies to use recyclable and sustainable specifications. The list of specification adjectives meets the criteria for aiding waste reduction by being reusable, refillable, repairable, more durable, and/or less toxic than their traditional counterparts.

Reusable encompasses but is not limited to: Refrigerant Recovery System (filters reusable refrigerant),

Recycled Carpet Fiber, Re-refined Motor Oil, Recycled Paper Fiber, Recycled Antifreeze, Recycled Content Furniture (not traditional wood), Printers, Toner Cartridges, Uniforms

More Durable can cover: Above-Ground Vaulted Fuel Storage Tanks, Classroom Furniture, Electronic

Lamps & Ballasts, Vacuum Cleaners, Floor Polish, Grader Slope Attachment, Plastic Lumber, Mattresses, Vertical File Cabinets, Wood Case Goods, Wood Library Furniture, LED Lighting

Energy Efficient - Energy Star can be applied to: Audio Visual System, Changeable Message Signs - Solar

Powered, Lighting Fixtures, Lamps, Warning Lights - Vehicles Safety, Water Coolers

Water Efficient has been applied to: - Low Flow Plumbing Fixtures 0.5 GPM lavatory facet nozzles and 1.5 GPM showerheads support the Governor's water conservation initiative during severe water restrictions statewide

Recycled products include but are not limited to: Office Paper, Napkins, Paper Towels, Bathroom

Tissue, Toilet Seat Covers, Plastic Trash Bags, Tires Locks, Vehicles, Furniture, Re-refined Motor Oil, Recycled Antifreeze, Storage Batteries, Traffic Cones, Tires

Refillable has been applied to: Ammunition - Cartridge Refills, Drums - Steel, Fire Extinguishers,

Cylinders for Welding, Medical & Specialty Gases Fuel Tanks, Self-Contained Breathing Apparatus, Toner Cartridges

Repairable can be applied to: Defibrillators, Musical Instruments Used Sweeper, Heavy Machinery, Helicopters, Printing Press, Vehicles (automobiles, buses and trucks), Piano, Generator, Forklift, Golf Cart, Rail Car Mover, 3-Position Fill Station

Refurbished/Rebuilt products may be applied to: Heart Monitor, Ultrasound, Defibrillators & ECG Monitors, Beds, Remanufactured Toner Cartridges Longer Lasting Floor Maintenance Machine Batteries, Library Furniture, Aluminum Nuts and Bolts - non-rusting alloys, Fluorescent Electronic Ballasts permit longer lamp life, LED lighting, extended-surface HVAC Air Filters, Synthetic Lubricants, Traffic Cones, Tires

Less Toxic has been applied to: Alternative Fuel Vehicles, Compact Vehicles, Hybrid Vehicles, Electric Vehicles, Dry Cell Batteries, Electronic Lamps & Ballasts, Fertilizers/Farm Chemicals, Inks for printing

(using non-petroleum based inks), Instructional Art Materials, Markerboard Markers, Mattresses, Scientific Products (eliminating Freon), Refrigeration and A/C Equipment, Synthetic and Biodegradable Lubricants,

Chlorine-free Sanitary Paper Products (napkins, paper towels, bathroom tissue, toilet seat covers), Cleaner Fuels (propane, gasohol, natural gas, bio-diesel), Diesel Exhaust Fluid, Vehicle Fuel Conversion Kits,

Disposal/Recycle Programs (mercury content, electronics, oil, antifreeze, pallets, tires, batteries, steel)

Recyclable has been incorporated in: Commodity Packaging, Commodity Metal Enclosures & Parts, Plastics, Steel & Reinforced Concrete Pipe, Chain Link Fencing, Electrical Wire, Treated Lumber, HVAC & Refrigeration Equipment- Refrigerants, Toner Cartridges, Motor Oil, Antifreeze.

Compliance and Risk Management Initiative

The Compliance and Risk Management subsection leads the following initiative.

Procurement Compliance Reviews

North Carolina Administrative Code (01 NCAC 05B .1605) mandates that the Division of Purchase & Contract (P&C) conduct compliance reviews on purchasing practices of all state agencies (departments, institutions, hospitals, community colleges, and universities). All compliance reviews, except universities, are conducted using data from the NC E-Procurement systems. Electronic procurement records reduce the necessity of conducting most phases of the analysis on-site, thereby increasing efficiency as well as reducing travel

costs, fuel emissions and operating expenses. In addition, all P&C compliance files are maintained electronically, improving sustainability.

Procurement Education Initiative

The Procurement Education section leads the following initiative.

Procurement Training

The Division's Procurement Education subsection offers North Carolina public procurement personnel and contract administrators the skills to carry out their duties efficiently and effectively. Virtual training sessions offered online and free of charge cover topics such as Introduction to Procurement, Request for Proposal, Demystifying Terms and Conditions, and Specification Writing.

Operations and Systems Support Initiatives

The Operations and Systems Support section supports the following initiatives.

Electronic Procurement Procedures and Systems

The Operations and System Support subsection manages the Division's internal procurement operations and agency-to-P&C interaction within a paperless environment by formalizing submissions electronically. In our continued commitment to efficiency, the Division of Purchase and Contract has merged the functionality of the previous electronic Vendor Portal (eVP), the legacy Interactive Purchasing System (IPS), and NC BIDS into one efficient new eVP platform to optimize the way state purchasers and vendors interact (July 2023). Among other improved functionality, the new eVP has increased transparency through enhanced public vendor search features, consolidated vendor account data, automated bid/contract extension postings, and streamlined HUB and NCSBE certification application requests into a paperless process.

The NC E-Procurement-SAP Ariba Buying module, used to process requisitions into purchase orders for final electronic delivery to vendors, has undergone several transformations to continue supporting the state's electronic procurement processing needs. Beginning in early 2019, the Division transitioned from an on-premises network management model to a Software as a Service (SaaS) model by implementing a cloud-based computing version of SAP Ariba Buying. This allowed the Division to decrease its footprint in the state's data warehouses. While decreasing our digital footprint through technology enhancements, the Division has strengthened visibility into the procurement process by deploying the supplemental SAP Ariba Sourcing and Contracts modules to state agencies since 2020.

As of February 1st, 2026, the NC eProcurement enterprise-wide system has 62,937 registered vendors, 10,305 Ariba Buying users, 506 Ariba Contracts users, and 243 Ariba Sourcing users, representing 120 entities across the state. This includes state agencies, hospitals and institutions, community colleges, K-12 public schools, universities, and local governments. NC eProcurement systems continue to contribute to a sustainable environment by significantly reducing hard-copy document reproduction (paper, printers, and supplies) through electronic business transactions and documents.

NC eProcurement Sustainability Assessment

In partnership with Accenture, the Division of Purchase and Contract participated in a sustainability assessment to understand its green software journey through the design, development, and deployment stages of eVP. This assessment, completed in 2023, focused on architectural, behavioral, coding, data, and operational practices.

Three major areas of improvement found in the assessment were:

- Architectural - By migrating eVP to the cloud, NC eProcurement has naturally increased its sustainable architecture. When moving to the cloud, companies can see up to 2x energy efficiency from architecture and data storage alone. Moving to the cloud also opens additional architectural efficiencies. With platform updates, NC eProcurement can use Microsoft's latest performance improvements and energy optimizations.
- Coding - Energy anti-patterns has led to more efficient code that uses fewer resources. By leveraging a low-code/no-code platform, rapid development has been achieved using fewer resources. Lazy loading, native to the Power Platform, has ensured that only the necessary data, images, and code is accessed when a screen is populated, ultimately leading to fewer resources being used without impacting the user.
- Data - By migrating eVP to the cloud, NC eProcurement has increased its sustainable data storage by moving from on-premises data storage to colocation providers. This and the team's product backlog for purging unused data will support NC eProcurement's largest sustainability maturity increase.

For more information regarding this report, please contact:

David O'Neal, State Purchasing Officer and Director of the N.C. Division of Purchase and Contract, at 984-236-0210.
