From: Taryn Davis

Through: Eric Morris

Subject: Identification of Select Emerging Compounds in Falls of the Neuse Reservoir and Surrounding Watershed.

Purpose: The objective of this reconnaissance study is to provide the NC Division of Water Resources information of the presence and concentration of select emerging compounds (ECs) including per- and polyfluoroalkyl substances (PFAS); 1,4-dioxane; and bromide in untreated surface waters of Falls Lake and the surrounding watershed.

Identification of Select Emerging Compounds in Falls of the Neuse Reservoir and Surrounding Watershed

Division of Water Resources

Identification of Select Emerging Compounds in Falls of the Neuse Reservoir and Surrounding Watershed

Upper Neuse River Basin
HUC: 03020201

Introduction

At the request of the North Carolina Division of Water Resources (DWR or Division), the Intensive Survey Branch (ISB) conducted a special study to characterize the presence and concentration of select emerging compounds (EC) in the surface waters of Falls of Neuse Reservoir (Falls Lake) and its immediate watershed. From July to December 2018 (excluding September), staff from the Division collected samples for 1,4-dioxane, bromide, and 23 different per- and polyfluoroalkyl substances (PFAS) at five in-lake locations and five tributary locations. Analytical results indicated minimal presence of 1,4-dioxane and two PFAS compounds over the course of the sampling period. No bromide was detected.

Background

Falls of the Neuse Reservoir (Falls Lake) is a multipurpose impoundment of the Neuse River located in the Upper Neuse River basin. The reservoir is the primary water supply for the City of Raleigh and surrounding towns in Wake County, and is used for a variety of additional purposes including flood control and public recreation¹. Three major wastewater treatment plants (WWTP), defined as those discharging over one million gallons per day (MGD), and eight minor WWTPs discharge their effluent into the Falls Lake watershed. Falls Lake Dam was constructed in 1981 by the US Army Corps of Engineers (ACOE) and the reservoir began filling in 1983². Falls Lake is located on the headwaters of the Neuse River, which is formed by the confluence of the Eno and Flat Rivers in Durham County. Other tributaries include the Little River, and Knap of Reeds, Ellerbe, Ledge, Lick, Little Lick, and Beaverdam Creeks. The watershed of this lake contains a mixture of urban, residential, agricultural and forested areas. The shoreline remains undeveloped; the majority being forested. Algal blooms and eutrophic conditions have been present in the lake since its impoundment. Falls Lake was listed on North Carolina's 2008 303(d) List of Impaired Waters as impaired for chlorophyll *a*. The portion of the lake upstream of I-85 was also listed as impaired for turbidity³.

The general heightened awareness of emerging compounds in NC due to recent downstream discharges of "GenX" into the Cape Fear River prompted the Division to investigate the presence and distribution of these chemicals in other major sources of drinking water. Current allocations

for drinking water withdrawals from Falls Lake are owned solely by the City of Raleigh, and treated at the E.M. Johnson water treatment plant (WTP) with a maximum capacity of 86 MGD and a daily average of 47 MGD⁹. It is important to note that all analytical data presented in this document reflect levels of target analytes detected in untreated surface waters as opposed to finished drinking water.

The synthetic industrial compound 1,4-dioxane is completely miscible in water. It is persistent in the environment and is difficult to remove through standard water and wastewater processes¹¹. It is used as an industrial solvent and also formed as a byproduct of some industrial processes. The compound has been characterized as “likely to be carcinogenic to humans” and is identified in the Third Unregulated Contaminant Monitoring Rule (UCMR) as a potential compound of concern in public drinking water by the United States Environmental Protection Agency (USEPA)¹⁰. The 1,4-dioxane NC Protective Value for Surface Waters Fresh Water, Water Supply (Class WS I-IV) is 0.35 µg/L⁶. Please note that North Carolina protective values are health-based guidelines, not regulatory limits, and may be based on limited toxicological information.

PFAS are man-made fluorinated organic compounds that are used in various consumer products including non-stick cookware, water-repellent clothing, stain resistant fabrics, cosmetics, food packaging materials, and fire-retardant foams. Although 23 PFAS compounds were the focus of this study, thousands of PFAS compounds exist. Of these compounds, PFOA and PFOS have been the most extensively produced and studied. The USEPA has stated that exposure to PFAS can lead to adverse health effects in humans¹². Though many companies have significantly decreased or ceased to use of PFOA and PFOS in manufacturing, other PFAS compounds are currently being used as replacements. The USEPA established health advisory level for PFOA, PFOS, or combined PFOA and PFOS is 70 ppt (ng/L)⁷ in finished drinking water. Health advisory levels identify the concentration of a compound in drinking water at which adverse health effects in the most sensitive populations are not anticipated to occur over specific exposure durations. A health advisory value is not a legally enforceable federal standard and is subject to change as additional information becomes available. The 23 PFAS compounds selected for this study are abbreviated throughout the document but the full chemical names and CASRNs are identified in Appendix 1.

Bromide (Br-) has no current established health advisory levels or guidelines due to its high human toxicity threshold and ecotoxicity observed only at high concentrations. Thus, the discharge of bromide has been left largely unregulated. While naturally occurring bromide poses low risk to humans, man-made brominated organic compounds can exhibit ecotoxicity when ingested. Incidental production of brominated organic compounds can occur in treating drinking water and persist in the finished water⁸. These brominated disinfection by-products (DBP) form when source waters contain bromide and are disinfected with chemical oxidants (e.g., chlorine, ozone). The Br-DBPs of concern are the bromine containing trihalomethanes (THMs) resulting from chlorine disinfection: bromodichloromethane (CHCl₂Br), dibromochloromethane

(CHClBr₂), and bromoform (CHBr₃). These compounds are formed when hypochlorous (HClO) acid oxidizes the bromide ions present in water to form hypobromous acid (HBrO), which subsequently reacts with organic material to form the Br-THMs.

Bromide, PFAS, and 1,4-dioxane were selected as compounds of interest for this study in response to the rising interest in the public health effects of consumption of these compounds in drinking water sources. Table 1 lists the monitoring stations and their corresponding geographic coordinates. Figure 1 provides a map of the Falls Lake monitoring stations.

Table 1. Station ID, station description, and coordinates of sampled sites.

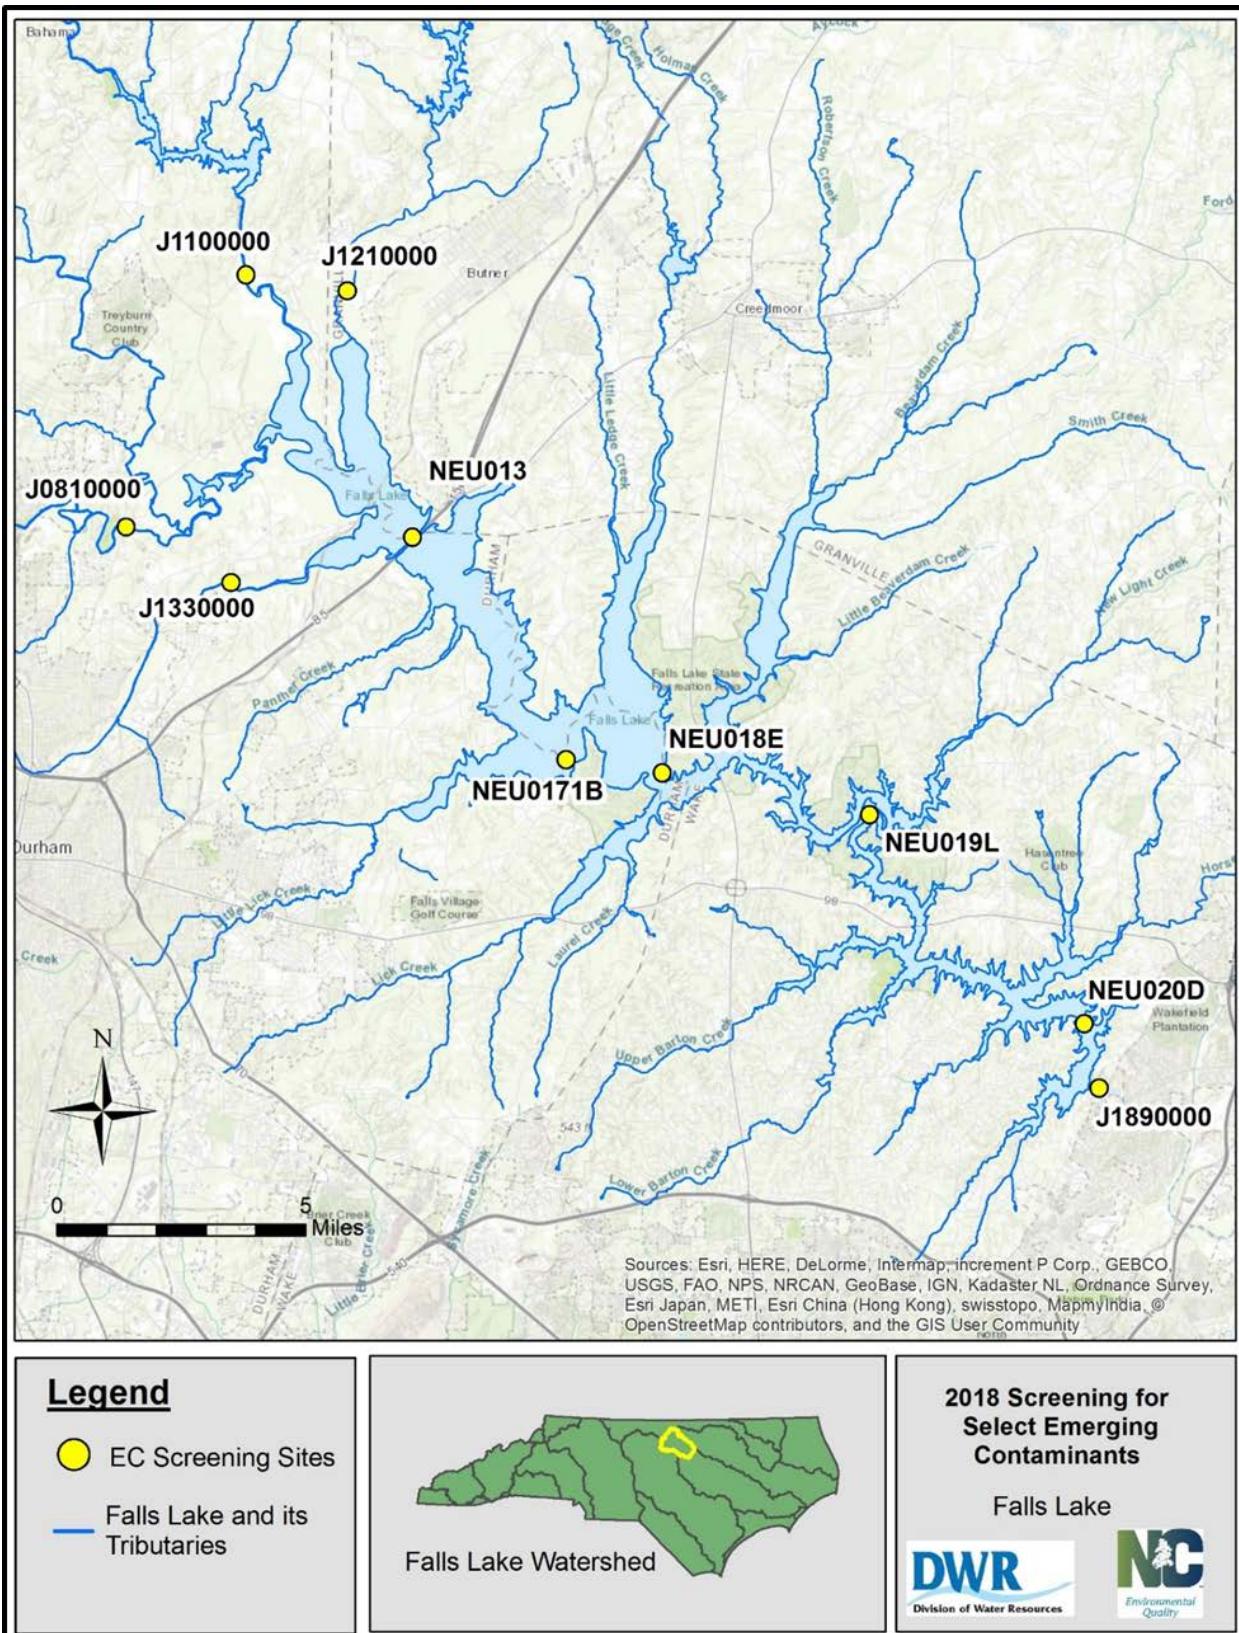

Figure 1. Falls Lake EC monitoring locations.

Methods

The selected sites (Figure 1) are located within Falls Lake and its watershed to provide water quality data in areas of Falls Lake that receive inflow from surface waters with permitted municipal NPDES facilities that have discharges greater than one million gallons per day. Five existing in-lake sites sampled as part of legislatively mandated monitoring, and five Ambient Monitoring System (AMS) watershed sites were sampled as part of this study. Site visits were conducted once per month from July through December 2018, with the exception of September when flooding from Hurricane Florence made the lake inaccessible.

Physical parameters were collected at the surface (0.15 m) using an In-Situ SmarTROLL multiparameter hydrosonde. Chemical parameters were collected as grab samples at a depth of 0.15 meters. Samples were collected in accordance with ISB's *Standard Operating Procedures Manual: Physical and Chemical Monitoring v2.1, Dec. 2013*⁴, and *Ambient Lakes Quality Assurance Project Plan v2.0, March 2014*⁵. Due to the unique characteristics of PFAS and their relative novelty to sampling protocols, sampling methodology was drawn from various draft sources with additional guidance from USEPA Science and Ecosystem Support Division (SESD). Bromide and 1,4-dioxane samples were analyzed by the DWR Central Laboratory in Raleigh, NC. PFAS samples were analyzed by USEPA's SESD in Athens, GA. Appropriate QA/QC samples were collected during each sampling event including trip blanks, duplicates, matrix spikes and matrix spike duplicates, and equipment blanks. All samples were maintained under chain of custody from the time of collection to the time of analysis. PFAS-free field clothing, equipment, and personal care products (e.g. sunscreen) were utilized wherever practical to avoid cross-contamination of water samples. Chemical and physical parameters collected are shown in Table 2.

Table 2. Summary of physical and chemical parameters collected. See Appendix 1 for a detailed list of PFAS chemical parameters.

Results

Physical Results

Physical water quality conditions remained within North Carolina 15A NCAC 02B Water Quality Standards for Surface Waters standards throughout the duration of the study. Secchi depth was not measured at the five AMS watershed sites. See Table 3 for complete list of ranges of values for each physical parameter for all monitored sites.

Chemical Results

Laboratory analysis for bromide was conducted by the DWR Central Laboratory in Raleigh. No returned values above the practical quantitation limit (PQL) of 0.4 $\mu\text{g}/\text{L}$ were reported at any site throughout the duration of the study. NCDWR defines the PQL as the lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

Analysis for 1,4-dioxane was also conducted by DWR at the Central Laboratory in Raleigh. Positive returns for 1,4-dioxane above the NC Protective Value for Surface Waters of 0.35 $\mu\text{g}/\text{L}$ occurred once; with a detection of 1 $\mu\text{g}/\text{L}$ of 1,4-dioxane at site NEU018E on 8/16/18 as shown below in Table 4. As noted earlier, NC Protective Values may be based on limited toxicological information and are offered as guidelines only.

PFAS analysis was conducted by USEPA's SESD in Athens, GA. Of the 23 PFAS compounds selected for this study only two compounds, PFPeA and PFOS were found at or above the minimum reporting limit (MRL) on at least one occasion. USEPA defines the MRL as the analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample specific and accounts for preparation weights, volumes, and dilutions. MRL values for PFAS analytes ranged from 17-160 ng/L during this study. PFPeA was detected at site J1210000 on 7/26/2018 at a concentration of 57ng/L. PFOS was detected 11/29/2018 at a concentration of 46 ng/L. Values of detected compounds and the associated detection dates for sites with compounds above the MRL are listed in Table 4.

Station ID/ Analyte	NEU018E	J1210000
PFPeA		7/26/2018 57 ng/L
PFOS		11/29/2018 46 ng/L
1,4-Dioxane	8/16/2018 1 µg/L	

Table 4. Values of detected compounds and detection date for sites with values above PQLs.

Summary:

Evaluation of physical and chemical results from this study suggest that while there are elevated levels of target analytes at some sites, additional long-term monitoring would need to be conducted to evaluate persistence of these compounds and their associated effects on Falls Lake as a drinking water source. Site J1210000 was the only site to exhibit detectable concentrations of target PFAS analytes, while site NEU018E was the only site to exhibit detectable concentrations of 1,4-dioxane. Precipitation events were not specifically targeted during this study, and no relationship between storm flows and presence or concentration of target analytes was evaluated. As noted earlier, all analytical data presented in this document reflect levels of target analytes detected in untreated surface waters, and do not represent contaminant concentrations in finished drinking water sourced from Falls Lake.

For further questions regarding this or other studies, please contact Eric Morris, Intensive Survey Branch Supervisor, directly at (919) 743-8496 or eric.morris@ncdenr.gov.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 18-0553, Falls Lake PFAS
Drinking Water

FROM: Floyd Wellborn
ASB Organic Chemistry Section Chief

THRU: Danny France, Chief
Analytical Support Branch

TO: Floyd Wellborn

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sestd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- Q-2 Result greater than MDL but less than MRL.
- QM-1 Matrix Spike Recovery less than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- OS-3 Surrogate recovery is lower than established control limits.

ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service
	Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO	ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board. Refer to the certificate and scope of accreditation AT-1644 at: http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd
NR	The EPA Region 4 Laboratory has not requested accreditation for this test.

Notes and Definitions for QC Samples

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- MRL-2 MRL verification for Non-Potable Water matrix
- Q-2 Result greater than MDL but less than MRL.
- QM-1 Matrix Spike Recovery less than method control limits
- QM-2 Matrix Spike Recovery greater than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- QS-3 Surrogate recovery is lower than established control limits.

4SESD-ASB

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 18-0645, Falls Lake PFAS

FROM: Floyd Wellborn
ASB Organic Chemistry Section Chief

THRU: Sandra Aker, Chief
Analytical Services Branch

TO: Floyd Wellborn

This data report is being reissued. Some or all of these results were previously reported. Please substitute the corrected results for those results previously reported. Please refer to the Report Narrative for more details.

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Services Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Project: 18-0645, Falls Lake PFAS - Reported by Floyd Wellborn

Report Narrative for Work Order: E183305 Analysis: SVOA

2/6/19 FW: HFPO-DA results were re-evaluated and determined to fail the identification criteria prescribed by the analysis method. Previously reported concentrations of HFPO-DA greater than the MDL but less than the MRL in samples E183305-03 and E183305-10 have been re-reported with the result of not detected at or above the minimum reporting limit. No other results were changed. This report replaces the previous report E183305 SVOA FINAL 11 14 18 0918.

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at

R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- Q-2 Result greater than MDL but less than MRL.
- QC-3 Analyte calibration criteria not met
- QC-5 Calibration check standard less than method control limits.
- OM-2 Matrix Spike Recovery greater than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- OS-3 Surrogate recovery is lower than established control limits.

ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service
	Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO	ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board.
	Refer to the certificate and scope of accreditation AT-1644 at: http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd

NR	The EPA Region 4 Laboratory has not requested accreditation for this test.

4SESD-ASB

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 19-0033, Falls Lake PFAS
Drinking Water

FROM: Floyd Wellborn
ASB Organic Chemistry Section Chief

THRU: Sandra Aker, Chief
Analytical Support Branch

TO: Floyd Wellborn

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sestd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Accreditations:

Semi Volatile Organics (SVOA)

PFAS

ASBPROC-800 PFAS (Water)

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

Project: 19-0033, Falls Lake PFAS - Reported by Floyd Wellborn

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- OM-1 Matrix Spike Recovery less than method control limits
- OM-3 Matrix Spike Precision outside method control limits

ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service
	<p>Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.</p>
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board.

Refer to the certificate and scope of accreditation AT-1644 at:
<http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd>

NR The EPA Region 4 Laboratory has not requested accreditation for this test.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 19-0060, Falls Lake PFAS

FROM: Diana Burdette
OCS Analyst

THRU: Floyd Wellborn, Chief
ASB Organic Chemistry Section

TO: Becky Allenbach

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Services Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sestd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Accreditations:

Semi Volatile Organics (SVOA)

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- OM-1 Matrix Spike Recovery less than method control limits
- OM-3 Matrix Spike Precision outside method control limits

ACRONYMS AND ABBREVIATIONS

- CAS Chemical Abstracts Service
Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
- MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
- MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
- TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

- ISO ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board.

Refer to the certificate and scope of accreditation AT-1644 at:
<http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd>

- NR The EPA Region 4 Laboratory has not requested accreditation for this test.

Notes and Definitions for QC Samples

- U The analyte was not detected at or above the reporting limit.
- J The identification of the analyte is acceptable; the reported value is an estimate.
- MRL-2 MRL verification for Non-Potable Water matrix
- Q-2 Result greater than MDL but less than MRL.
- QM-1 Matrix Spike Recovery less than method control limits
- QM-3 Matrix Spike Precision outside method control limits
- QR-2 MRL verification recovery greater than upper control limits.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 19-0093, Falls Lake PFAS

FROM: Diana Burdette
OCS Analyst

THRU: Floyd Wellborn, Chief
ASB Organic Chemistry Section

TO: Becky Allenbach

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Services Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

Accreditations:

Semi Volatile Organics (SVOA)

PFAS

ASBPROC-800 PFAS (Water)

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

DATA QUALIFIER DEFINITIONS

- U The analyte was not detected at or above the reporting limit.
- H-7 Recommended preparation holding time exceeded
- J The identification of the analyte is acceptable; the reported value is an estimate.
- Q-2 Result greater than MDL but less than MRL.
- QC-3 Analyte calibration criteria not met
- QL-3 Laboratory Control Spike Precision outside method control limits

ACRONYMS AND ABBREVIATIONS

- CAS Chemical Abstracts Service
 - Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
- MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
- MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
- TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

- ISO ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board.
 - Refer to the certificate and scope of accreditation AT-1644 at:
<http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd>
- NR The EPA Region 4 Laboratory has not requested accreditation for this test.

Notes and Definitions for QC Samples

- U The analyte was not detected at or above the reporting limit.
- H-7 Recommended preparation holding time exceeded
- J The identification of the analyte is acceptable; the reported value is an estimate.
- MRL-2 MRL verification for Non-Potable Water matrix
- Q-2 Result greater than MDL but less than MRL.
- QC-3 Analyte calibration criteria not met
- QL-3 Laboratory Control Spike Precision outside method control limits
