

STATE-MANAGED SPECIES – STRIPED MULLET

Figure 8. Number of adult striped mullet per gill net set from the striped bass independent gill net survey (P135), 1990-2020. To provide the most relevant striped mullet index data were limited to those collected from 2.5-in to 5.5-in mesh sizes from November through February (fall-winter) in less than 10 ft of water. Bubble size represents the proportion of fish at length. Sampling did not occur in 2020.

Figure 9. Length-frequency (fork length, in) of adult striped mullet from the fall-winter portion of the striped bass independent gill net survey (P135), 1990-2020. In some years no striped mullet were captured or no lengths were recorded. Sampling did not occur in 2020.
