

Figure 14. Nominal index (number of crabs per tow) of fully recruited crabs relative abundance ( $\geq 127$  mm, 5 inches, CW) captured in Program 195 for September male (A) and female (B), 1995–2022 for all strata combined. [Note: 2018 September sampling was conducted in October and in 2020 and 2021 less than 54 stations were sampled in both months]
