## **1.0 EXECUTIVE SUMMARY / PROJECT ABSTRACT**

The unnamed tributary to Little Hunting Creek (UTLHC) Stream Restoration Project (Site) is located west of Harmony Highway (NC 21) and north of Hunting Creek Road (SR 1111) in Iredell County, North Carolina (Appendix 1.1). The Site lies within the 197 acre parcel owned by Mr. Allen D. Johnson. UTLHC is a first order perennial stream located in the Northern Inner Piedmont ecoregion in the Yadkin River Basin (USGS HUC 03040102). The stream restoration plan was designed by KCI Associates of North Carolina. Project streams were restored primarily using a Priority III restoration approach. UTLHC's main channel was designed and constructed as a B4c type channel. The restoration reach was restored using native vegetation and in-stream structures, such as cross-vanes and rock sill grade controls. Riparian areas were planted with native bare root seedlings and herbaceous cover to enhance the riparian areas and stabilize stream banks. Construction of the restoration project was completed in the fall of 2007. Appendix A provides more detailed project activity, history, contact information, and watershed/site background information for this project.

### *Project Goals*

- Restore a stable channel morphology and floodplain to the project stream that is capable of moving the flows and sediment provided by its watershed.
- Improve water quality by reducing bank erosion and bed degradation.
- Enhance aquatic and terrestrial habitat in the stream corridor.

### *Project Objectives*

- Build an appropriate B4c type channel with stable dimensions.
- Plant a riparian buffer of native trees and shrubs throughout the site.
- Grade a floodplain adjacent to the stream.
- Exclude livestock from the riparian buffer.

The 2014 monitoring found UTLHC to generally be stable with little change from the previous monitoring year. The stream structures are in good condition and continue to maintain grade. Areas of in-stream vegetation noted in previous monitoring years have washed out completely with the exception of a few localized areas at the very top of the site. Areas of channel degradation at the bottom of the site reported on in previous monitoring years also appear to be the result of sediment deposition on the banks and bankfull bench due to backwater conditions when Little Hunting Creek rises. As a part of the stream success criterion, the stream must experience at least two bankfull events, each in separate monitoring years. The site has experienced multiple bankfull events since construction.

The vegetation monitoring success criterion for the planted stream riparian zone during fifth-year monitoring is a density of 260 stems/acre. The fifth-year vegetation monitoring was based on the Level 2 CVS-EEP vegetation monitoring protocol. Overall, the Site has an average density of 301 planted stems/acre, excluding live stakes. Of all the vegetation monitoring plots, Plots 1, 4, and 7 had planted stem densities below the five-year success criterion of 260 stems/acre. Including volunteers, the Site averaged 1,174 total stems/acre. While there are some isolated invasive species, including Chinese privet (*Ligustrum sinense*), tree of heaven (*Ailanthus altissima*), and Japanese honeysuckle (*Lonicera japonica*), none of these are especially prevalent or taking over any one particular area. Overall the site is well vegetated with a dense cover of herbaceous and woody species.

Summary information/data related to the occurrence of items such as beaver or encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in

these reports can be found in the Baseline Monitoring Report and in the Mitigation Plan documents available on the EEPs website. All raw data supporting the tables and figures in the appendices are available from EEP upon request.

## 2.0 METHODOLOGY

The survey data were collected with a Total Station instrument.

The stationing for the longitudinal profile is based on the thalweg stationing and has been adjusted to match grade control structures from previous longitudinal profiles. The stationing was adjusted by changing the stationing between grade control structures to match the stationing from previous surveys.

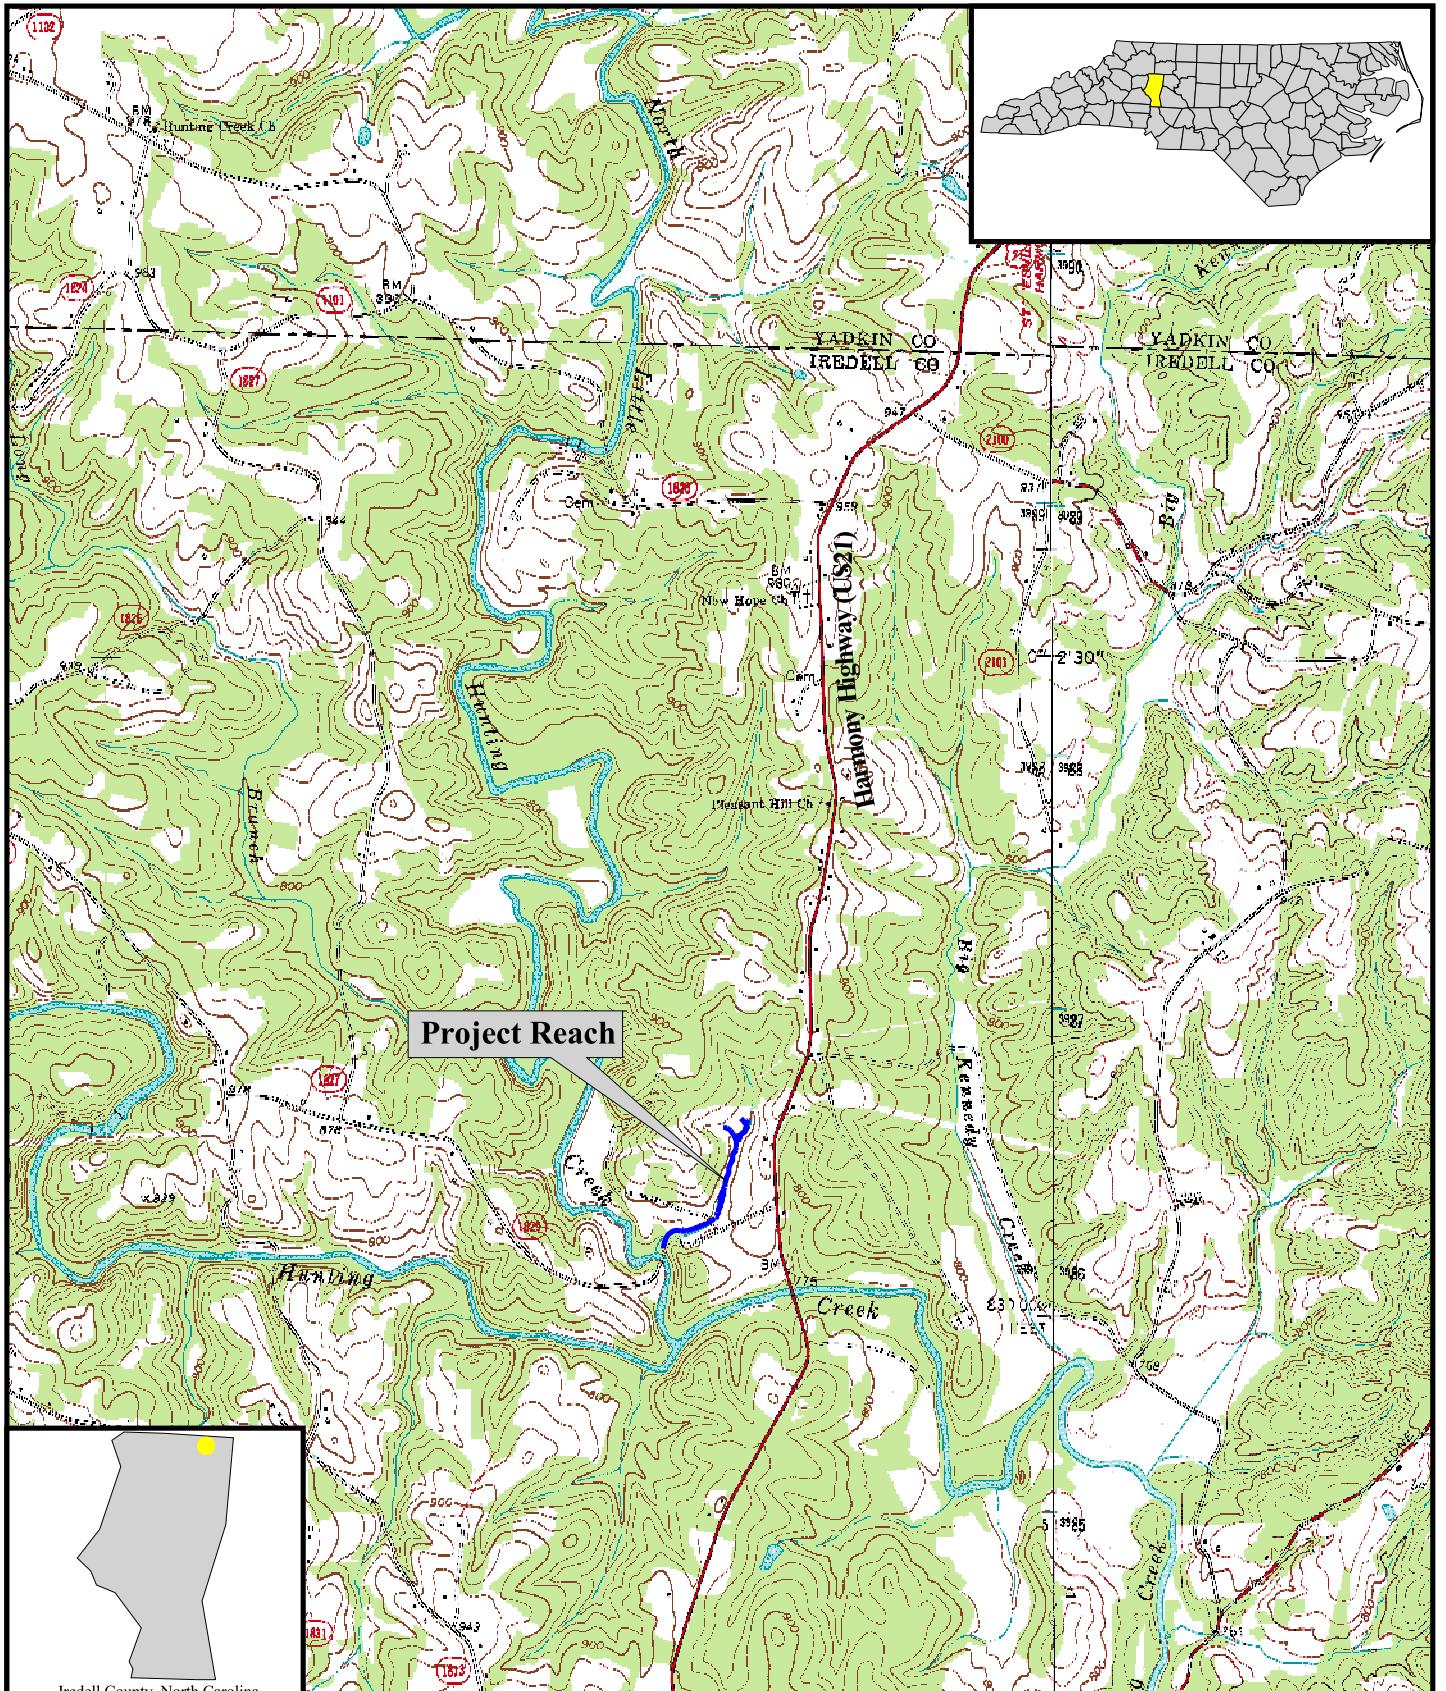

The CVS-EEP protocol, Level 2 (<http://cvs.bio.unc.edu/methods.htm>) was used to collect vegetation data from the site.

## **Visual Assessment Data**

**Table 5. Visual Stream Morphology Stability Assessment**

Project Number and Name: 197 - UT to Little Hunting Creek (Johnson Site)

Assessed Length 2,209

**Main Channel**

Major Channel Category	Channel Sub-Category	Metric	Number Stable, Performing as Intended	Total Number in As-built	Number of Unstable Segments	Amount of Unstable Footage	% Stable, Performing as Intended
<b>1. Bed</b>	1. Vertical Stability (Riffle and Run units)	1. <u>Aggradation</u> - Bar formation/growth sufficient to significantly deflect flow laterally (not to include point bars)			0	0	100%
		2. <u>Degradation</u> - Evidence of downcutting			0	0	100%
	2. Riffle Condition	1. <u>Texture/Substrate</u> - Riffle maintains coarser substrate	32	32			100%
		1. <u>Depth</u> Sufficient (Max Pool Depth : Mean Bankfull Depth $\geq 1.6$ )	22	22			100%
	3. Meander Pool Condition	2. <u>Length</u> appropriate (>30% of centerline distance between tail of upstream riffle and head of downstream riffle)	22	22			100%
		1. Thalweg centering at upstream of meander bend (Run)	22	22			100%
	4. Thalweg Position	2. Thalweg centering at downstream of meander (Glide)	22	22			100%
2. Bank	1. Scoured/Eroding	Bank lacking vegetative cover resulting simply from poor growth and/or scour and erosion			0	0	100%
	2. Undercut	Banks undercut/overhanging to the extent that mass wasting appears likely. Does <u>NOT</u> include undercuts that are modest, appear sustainable and are providing habitat.			0	0	100%
	3. Mass Wasting	Bank slumping, calving, or collapse			0	0	100%
			<b>Totals</b>		0	0	100%
3. Engineered Structures	1. Overall Integrity	Structures physically intact with no dislodged boulders or logs.	11	11			100%
	2. Grade Control	Grade control structures exhibiting maintenance of grade across the sill.	11	11			100%
	2a. Piping	Structures lacking any substantial flow underneath sills or arms.	11	11			100%
	3. Bank Protection	Bank erosion within the structures extent of influence does <u>not</u> exceed 15%. (See guidance for this table in EEP monitoring guidance document)	11	11			100%
	4. Habitat	Pool forming structures maintaining ~ Max Pool Depth : Mean Bankfull Depth ratio $\geq 1.6$ Rootwads/logs providing some cover at base-flow.	11	11			100%

<b>DESCRIPTION OF WORKSHEETS IN THIS DOCUMENT-----</b>	
<b>Metadata</b>	Description of database file, the report worksheets, and a summary of project(s) and project data.
<b>Proj, planted</b>	Each project is listed with its PLANTED stems per acre, for each year. This excludes live stakes.
<b>Proj, total stems</b>	Each project is listed with its TOTAL stems per acre, for each year. This includes live stakes, all planted stems, and all natural/volunteer stems.
<b>Plots</b>	List of plots surveyed with location and summary data (live stems, dead stems, missing, etc.).
<b>Vigor</b>	Frequency distribution of vigor classes for stems for all plots.
<b>Vigor by Spp</b>	Frequency distribution of vigor classes listed by species.
<b>Damage</b>	List of most frequent damage classes with number of occurrences and percent of total stems impacted by each.
<b>Damage by Spp</b>	Damage values tallied by type for each species.
<b>Damage by Plot</b>	Damage values tallied by type for each plot.
<b>Planted Stems by Plot and Spp</b>	A matrix of the count of PLANTED living stems of each species for each plot; dead and missing stems are excluded.

# **Appendix E**

## **Hydrology Data**

**Table 12. Verification of Bankful Events  
UT to Little Hunting Creek (Johnson Site) / Project No. 197**

Date of Rainfall	Amount (inches)	USGS Approved (A) or Provisional Data (P)
8/26/2008 – 8/27/2008	4.56	A
12/10/2008 – 12/11/2008	3.10	P
1/6/2009 – 1/7/2009	2.55	A
6/3/2009 – 6/5/2009	4.59	P
1/24/2010 /- 1/25/2010	2.56	P
2/5/2010 – 2/6/2010	2.33	P
5/16/2010 – 5/17/2010	5.41	P
9/26/2010 – 9/28/2010	4.41	P
10/27/2010 – 10/28/2010	5.69	P
5/14/2012 – 5/16/2012	5.1	P
