1.0 EXECUTIVE SUMMARY / PROJECT ABSTRACT

Little Grassy Creek and an unnamed tributary to Little Grassy Creek (UT1) in Granville County, North Carolina were preserved and enhanced by the Ecosystem Enhancement Program (EEP). The project preserved 12,546 linear feet of Little Grassy Creek, 164 linear feet of UT1, 452 linear feet of UT2, 3,774 linear feet of UT3, and 2,250 linear feet of UT4, and enhanced 75 linear feet of Little Grassy Creek and 2,464 linear feet of UT1. The project goals and objectives are listed below.

Project Goals

- Improving water quality.
- Restoring aquatic and riparian habitat.

Project Objectives

- Stabilizing the banks on 469 LF of UT1 and 75 LF on Little Grassy Creek
- Controlling invasive species for 7 acres of stream buffer along UT1
- Enhancing stream buffer on approximately 8.3 acres along UT1 and Little Grassy Creek
- Preserving approximately 12,710 LF of stream along UT1 and Little Grassy Creek
- Establishing native streambank and floodplain vegetation in the permanent conservation easement

The conservation easement was planted where the riparian area had been cleared or thinned due to past agricultural activities. Planting also occurred where construction activities took place, with bare root trees and shrubs planted on the floodplain and live stakes planted along the regraded banks. Exotic invasive vegetation was also removed from the conservation easement. Seven vegetation monitoring plots were established during the baseline monitoring. The fifth year of monitoring calculated an average of 439 planted stems/acre and 804 total stems/acre across all monitoring plots. Specifically, the seven plots ranged between stem densities of 162 to 688 planted stems/acre. Plots 6 and 7 were found to have planted stem densities below the five-year success criterion of 320 stems/acre; however both plots exceeded the total stem density of 320 stems/acre. It should be noted that Plots 6 and 7 are not adjacent to a project stream; they are located in an upland area of additional easement acreage. The plots have numerous volunteer woody stems, and the total stem densities for all plots have increased over the course of monitoring. Additionally, supplemental planting occurred at the site in January 2012, during which 330 containerized trees were planted in areas that had been noted as having low planted stem density along UT1 (Appendix E Supplemental Planting Report).

The stream assessment completed during the fifth year of monitoring found the streams to be functioning as designed. The measured channel dimensions at the monitored cross-sections have not changed significantly since the previous monitoring year. Additionally, there are not any problems with the installed root wads and cross vane. In December of 2010, a beaver dam was found near the downstream limits of the project on Little Grassy Creek. The dam was creating backwater conditions through the enhancement portion of Little Grassy Creek. The dam was removed in early 2011 by the landowner. During the 2012 monitoring period there were no signs that the dam was being rebuilt.

Summary information/data related to the occurrence of items such as beaver or encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in these reports can be found in the Baseline Monitoring Report (formerly Mitigation Plan) and in the Mitigation Plan (formerly the Restoration Plan) documents available on the EEP's website. All raw data supporting the tables and figures in the appendices are available from EEP upon request.

2.0 METHODOLOGY

In the spring of 2011 a survey grade GPS unit was used to map the locations of UT2, UT3, and UT4. These assets were previously unmapped or the data was inaccurate. These assets have been added to this report.

The cross-section data were collected with a laser level during the week of September 20, 2012.

The Level 2 CVS-EEP protocol (<u>http://cvs.bio.unc.edu/methods.htm</u>) was used to collect vegetation data from the Little Grassy Creek site during the week of September 20, 2012.

Report Prepared By	April Helms
Date Prepared	10/30/2012 9:11
database name	KCI-2012-A.mdb
database location	M:\2007\12071067_2007 EEP OPEN END\Veg_database
computer name	12-CV76KF1
file size	59768832
DESCRIPTION OF WORKSH	EETS IN THIS DOCUMENT
Metadata	Description of database file, the report worksheets, and a summary of project(s) and project data.
Proj, planted	Each project is listed with its PLANTED stems per acre, for each year. This excludes live stakes.
Proj, total stems	Each project is listed with its TOTAL stems per acre, for each year. This includes live stakes, all planted stems, and all natural/volunteer stems.
Plots	List of plots surveyed with location and summary data (live stems, dead stems, missing, etc.).
Vigor	Frequency distribution of vigor classes for stems for all plots.
Vigor by Spp	Frequency distribution of vigor classes listed by species.
Damage	List of most frequent damage classes with number of occurrences and percent of total stems impacted by each.
Damage by Spp	Damage values tallied by type for each species.
Damage by Plot	Damage values tallied by type for each plot.
Planted Stems by Plot and	A matrix of the count of PLANTED living stems of each species for each plot; dead
Spp	and missing stems are excluded.
ALL Stems by Plot and spp	A matrix of the count of total living stems of each species (planted and natural volunteers combined) for each plot; dead and missing stems are excluded.

monitoring period for consistency.

Appendix E

Supplemental Planting Report

INSPECTION REPORT

Date of Inspection:	January 31, 2012	
Date of Report:	January 31, 2012	
Project:	Little Grassy Creek – EEP #224	
Location:	Granville County, NC	
Inspection of:	Supplemental Planting	(Direct Pay for Services)
By:	Wright Contracting.	(Contractor)
Name & Title of Inspec	ctor Perry Sugg – EEP Project Mgr	

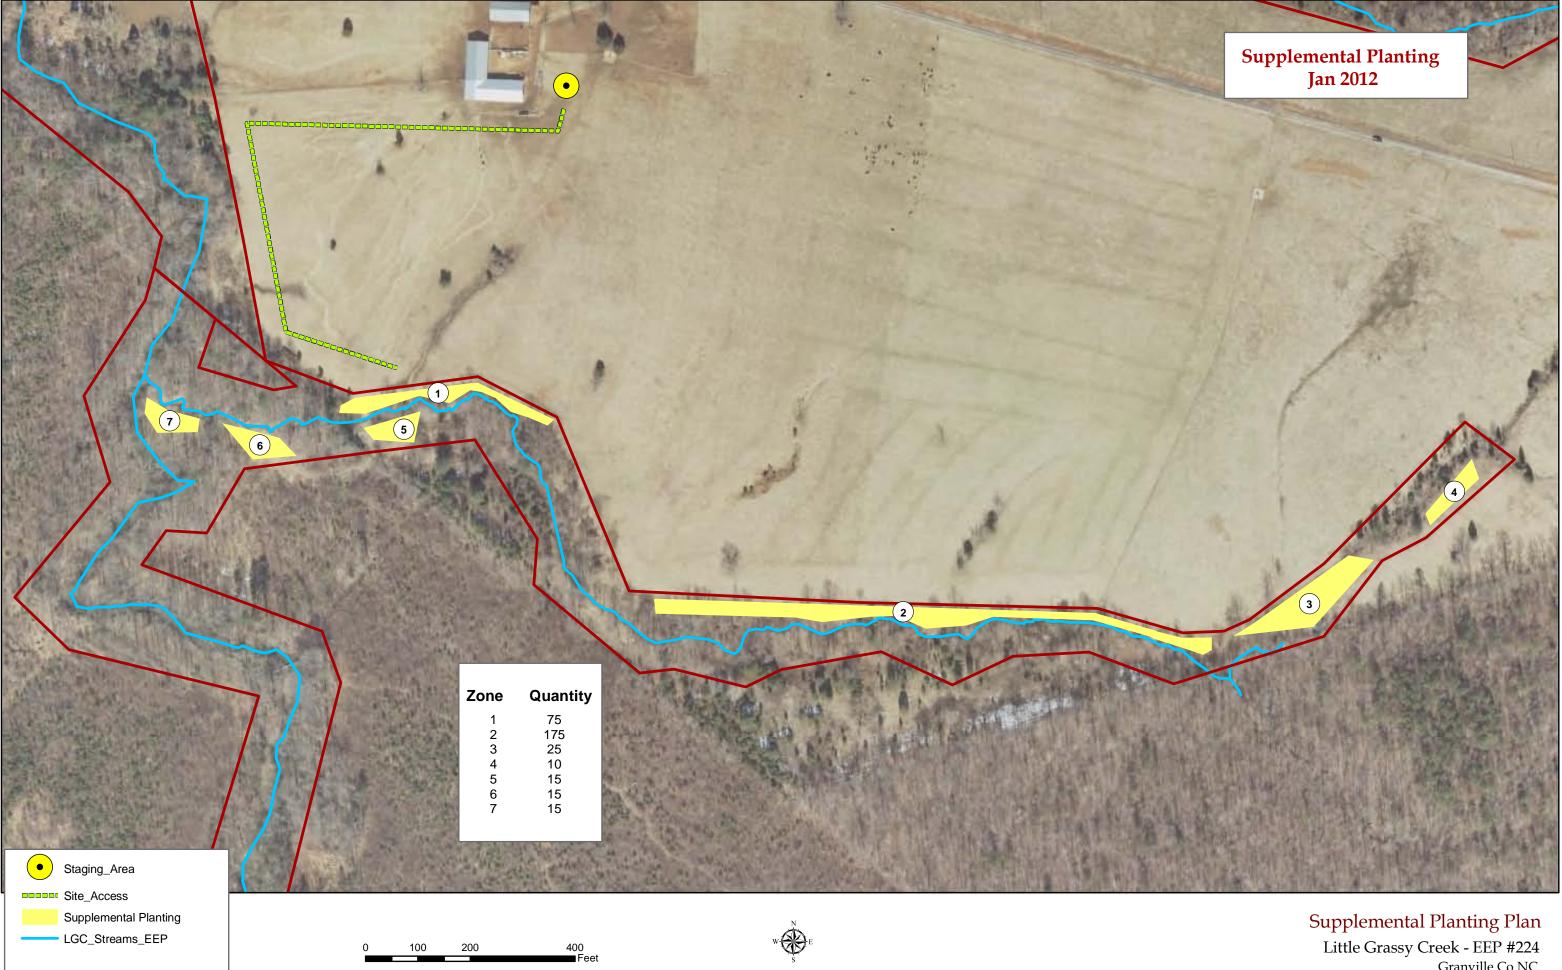

COMMENTS:

At the direction of EEP, Wright Contracting installed 330 containerized trees at the Little Grassy Creek project site in Granville County NC on January 31, 2012. The containerized trees were owner-provided plants grown by NCWRC's plant nursery in Yanceyville NC. WRC delivered all plants on the day of planting.

Wright installed the 330 five-gal containerized trees within targeted areas along UT1 as identified by EEP (see attached map). Wright was instructed to plant the planting areas with appropriate representation of species, and spaced at least 10 feet from existing trees and 10 feet from the existing fencing.

Species	Quantity Planted
Willow Oak (Quercus phellos)	30
Sycamore (Platanus occidentalis)	75
Green Ash (Frax. pennsylvanica)	50
Red maple (Acer rubrum)	50
Cherrybark Oak (Quercus pagoda)	75
River birch (Betula nigra)	50

All trees planted met NC EEP size and vigor requirements. A final walk through was conducted by EEP upon completion on 1/31/2012 and approved.

Little Grassy Creek - EEP #224 Granville Co NC January 2012
