

Lyle Creek
Post Closeout Contingency Update
Full Delivery Site

DMS ID (IMS) # 94643
Catawba County
Stream & Wetland Mitigation Site

The Lye Creek closeout site visit was completed with the Interagency Review Team (IRT) on 6/20/2017. The IRT considered a total of 5,571 SMUs and 7.1 WMUs for closure during the site visit. The site was not approved for closure in June 2017, the following plan of action was approved:

1. Monitor wetland hydrology for one additional year (MY6-2017).
2. Monitor stream reaches UT1 (upstream reach) and UT1b (upstream reach) visually for one additional year.
3. Continue beaver management as necessary for one additional year.
4. Fixed plot vegetation height data to be submitted to the IRT (wetlands only).
5. Eliminate and replant minor landowner encroachments in a few locations.

Resolution:

1. All groundwater gages within the Site met the project success criteria (14 consecutive days, 7.0% of growing season) for Year 6. Please see attached summary gage table and plots for Year 6 results.
2. Stream reaches UT1 (upstream reach) and UT1B (upstream reach) were visually monitored during Year 6 between June and November 2017. Both reaches appear stable and are not showing signs of instability. Please refer to the attached Current Condition Plan View Map and site photographs.
3. Wildlands has continued to monitor the Lyle Creek Site for additional signs of beaver activity. At this time, beaver are not present within the lower reaches of UT1.
4. Fixed plot vegetation height data has shown a large improvement from the MY5 and MY6 assessments. The MY6 (2017) average wetland plot height is 7.8 ft compared to MY5, which was 6.04 ft. The planted vegetation is healthy and continuing to grow. It is anticipated that the average planted stem height will continue to improve and exceed the 8 ft height requirement in 2018. Please refer to the attached vegetation summary data for MY6.
5. Wildlands added additional posts and signs to demarcate the easement boundary (Please refer to attached photographs. Additional plants were installed in 2016 to replace stem loss from encroachment. In addition, herbaceous vegetation and natural recruitment have flourished in MY6. These landowner encroachments have been resolved and are no longer an area of concern.

Recommendation:

DMS recommends closing the Lyle Creek site with 5,571 SMUs and 7.1 WMUs.
