4. Wetland Hydrology Criteria Attainment

I. Executive Summary/Project Abstract

This report represents monitoring year 5 for the Purlear Creek Phase II stream restoration project in Wilkes County, North Carolina. The project is comprised of two reaches. The upper reach is Reach 4 and the lower reach is Reach 1. Phase II of the Purlear Creek stream and wetland restoration project strived to restore stream reaches and enhance adjacent riparian wetlands. Both streams lie within an area that is actively used for cattle grazing. The alignments of the channels indicated that the channels had been straightened and channelized in the past. The designer used a Priority I approach to restore Reach 4 and a Priority II approach for Reach 1. For both reaches, in-stream structures such as A-Vane, Cross-Vanes, and J-Hooks were installed to provide additional stability to the channel and root wads were installed to provide additional habitat. The objectives of the Phase II restoration were:

- Restore wetland hydrology by increasing the frequency and duration of overbank flows into the adjacent wetland and raise groundwater elevations influenced by the base flow elevation of the stream
- Improve in-stream habitat
- Stabilize streambanks and reduce sedimentation to downstream reaches
- Fence cattle out of the stream and riparian area
- Reestablish a viable riparian forest community

Four vegetation monitoring plots in the riparian buffer of the Purlear Phase II project were surveyed. All the plots had been previously established and sampled after construction during the previous monitoring years. Plot numbering is consistent with numbering from the Vegetation Baseline Data post-construction monitoring report. Estimated planted stem density was 613 stems per acre. Vegetation survival thresholds were met in all four plots. Little mortality was seen from the previous year. Vegetation was vigorous and healthy. No vegetative problem areas were observed. Vegetation data is presented in Appendix C of this report.

The channel has remained stable since construction. The majority of channel banks are well-covered with vegetation. Study reaches show no significant changes in channel pattern. The channel profile did not change significantly from the as built condition with the exception of some aggradation along the upstream portion of Reach 4. The aggradation observed in Reach 4 was likely caused by excess sediment from upstream sources. There is no evidence of lateral bars and the area appears to be stable. This aggradation is illustrated in the longitudinal profile and cross sections 1, 2, and 3 in Appendix D of this report. No significant erosion was observed along the study reaches with the exception of one problem area in Reach 1 (problem area 4). Problem area 4 (PA 4) consists of bank erosion observed on the left streambank at cross-section 9. This area of erosion was likely caused by the beaverdam that was removed this year. The beaverdam backed water up in this area for several years. Once the beaverdam was removed, the saturated streambank started to erode. This issue appears to be isolated and not a trend of systematic failure.

The restored wetland along Reach 4 exceeded minimal conditions for hydrology during the 2010 monitoring period. Wetland data is presented in Appendix E of this report. There are six gauges at the site in two clusters of three gauges. Two gauges (RDS-W1 and RDS-W2) were originally installed at the site to monitor water levels for the two restored wetland tracts. These gauges did not function properly and two additional gauges (W1A and W2A) were installed to replace them. There were

issues with the W2A gauge so two additional gauges (W1B and W1A) were installed in 2008. These gauges have functioned properly and are the ones that are currently monitored.

Summary information/data related to the occurrence of items such as beaver or encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in these reports can be found in the Baseline Monitoring Report (formerly Mitigation Plan) and in the Mitigation Plan (formerly the Restoration Plan) documents available on EEPs website. All raw data supporting the table and figures in the appendices is available from EEP upon request.

II. Methodology Section

Monitoring methods used are based on US Army Corps of Engineering and NC Division of Water Quality Guides as referenced below.

Geomorphic surveys were completed with survey grade GPS. A small 20-foot section of reach 1 was surveyed with a total station (no GPS coverage) and tied into the GPS survey with three common benchmarks.

Longitudinal stationing used for the profiles is consistent with the as-built alignment and previous four monitoring events.

Wetted perimeter surface pebble counts were completed in two zones per reach (illustrated on the CCPVs in Appendix B). The method used is consistent with the US Forest Service document referenced below (Bunte et al. 2001)

The taxonomic standard for vegetation used in this report was based on “Flora of the Carolinas, Virginia, Georgia, and Surrounding Areas”, by Alan S. Weakley. The vegetation monitoring protocol used for collecting vegetation data was the CVS-EEP Protocol for Recording Vegetation Version 4.0 (Lee et al. 2006).

Project Vicinity Map and Background Tables

1. Project Location Map
2. Project Setting Map
3. Project Restoration Components
4. Project Activity and Reporting History
5. Project Contact Table
6. Project Background Table

Figure 1. Project Location

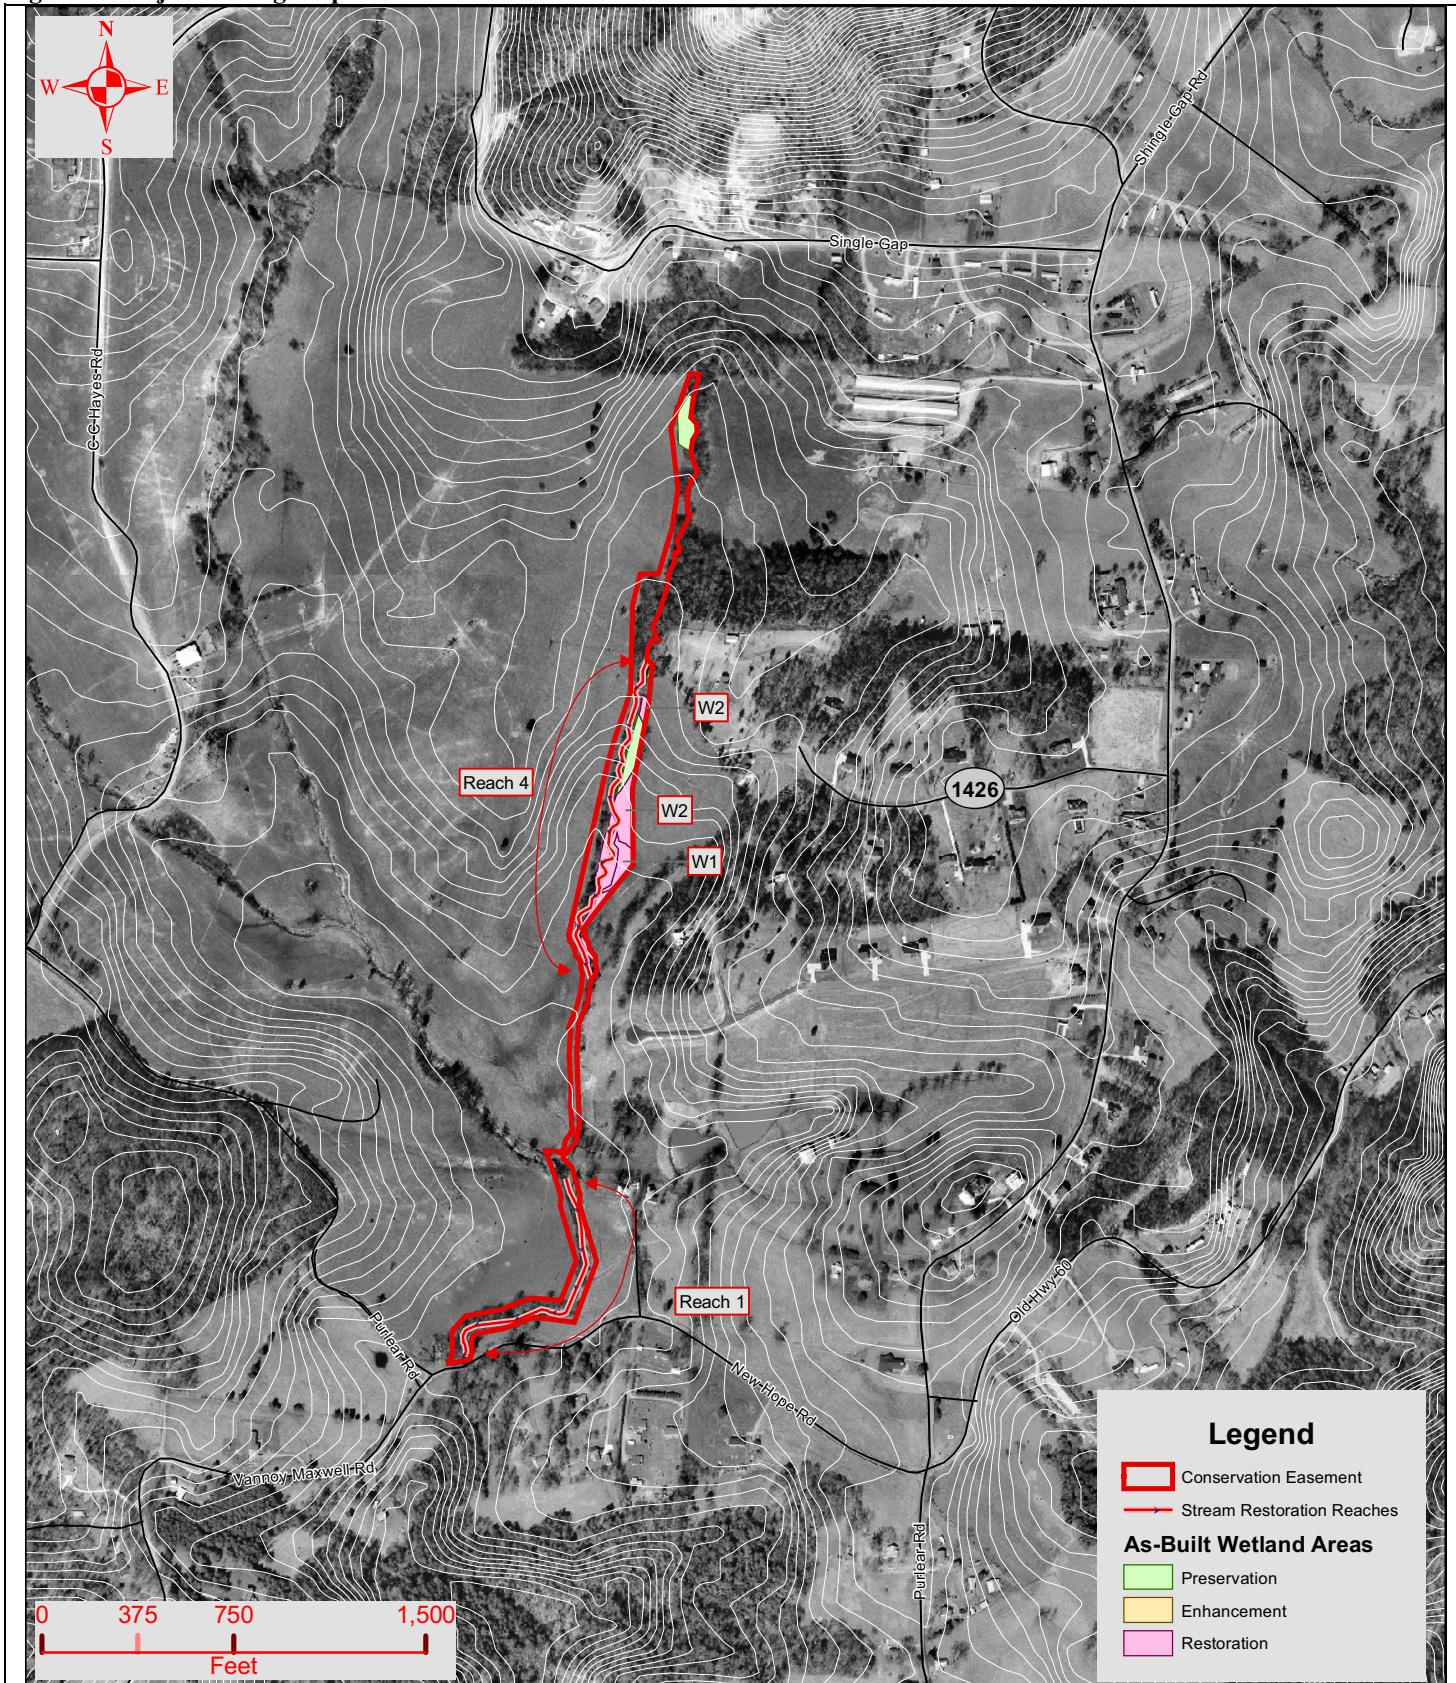

Directions from Hwy. 421 in Wilkesboro:

From Wilkesboro on Hwy. 421, turn right onto NC-16. Follow NC-16 for 3.5 miles to the Miller's Creek intersection. Turn left onto Old Hwy. 421 (SR-1304) and follow for 2.6 miles. Turn right onto Purlear Road (SR-1346) and follow for 0.8 miles. You will come to a stop sign at a church, turn left to stay on Purlear Road (also called New Hope Road). Follow Purlear Road for 0.6 miles until the intersection with Vannoy Maxwell Road. Project begins at this intersection and continues through the intersection with CC Hayes Road (SR- 1349).

Contact the EEP Project Manager for access and landowner notification instructions. Access is not permitted to this site without prior approval.

DESCRIPTION OF WORKSHEETS IN THIS DOCUMENT-----

Metadata This worksheet, which is a summary of the project and the project data.
Each project is listed with its PLANTED stems, for each year. This excludes live stakes and lists stems per acre.
Proj, planted Each project is listed with its TOTAL stems, for each year. This includes live stakes, all planted stems, and all natural/volunteer stems. Listed in stems per acre.
Proj, total stems
Plots List of plots surveyed.
Vigor Frequency distribution of vigor classes.
Vigor by Spp Frequency distribution of vigor classes listed by species.
Damage List of most frequent damage classes with number of occurrences and percent of total stems impacted by each.
Damage by Spp Damage values tallied by type for each species.
Damage by Plot Damage values tallied by type for each plot.
ALL Stems by Plot and spp Count of total living stems of each species (planted and natural volunteers combined) for each plot; dead and missing stems are excluded.

APPENDIX E- Hydrologic Data

1. Verification of Bankfull Events
2. Monthly Rainfall Data
3. Water Level Plots
4. Wetland Hydrology Criteria Attainment

Table 12. Verification of Bankfull Events
Purlear Creek Phase II / Project ID 010559701

| Date of Data Collection | Date of Occurrence | Method | Photo # |
|-------------------------|--------------------|--------------------------------|---------|
| Monthly | 6/28/2006 | On-site transducer/data logger | |
| Monthly | 7/31/2006 | On-site transducer/data logger | |
| 8/27/2008 | 8/27/2008 | Proximal USGS Gage Resource* | |
| 5/27/2009 | 5/27/2009 | Proximal USGS Gage Resource* | |
| 1/25/2010 | 1/25/2010 | Proximal USGS Gage Resource* | |

*Bankfull event verified at two proximal USGS gage sites in Wilkes County (Reddies Rivers, North Wilkesboro and Elk Creek, Elkville, NC) using the rural Piedmont regional curve developed by NCSU (Harman et al 1999).

Monthly Precipitation Data: Purlear, NC

Monitoring Well RDS-W1b

Monitoring Well RDS-W2b

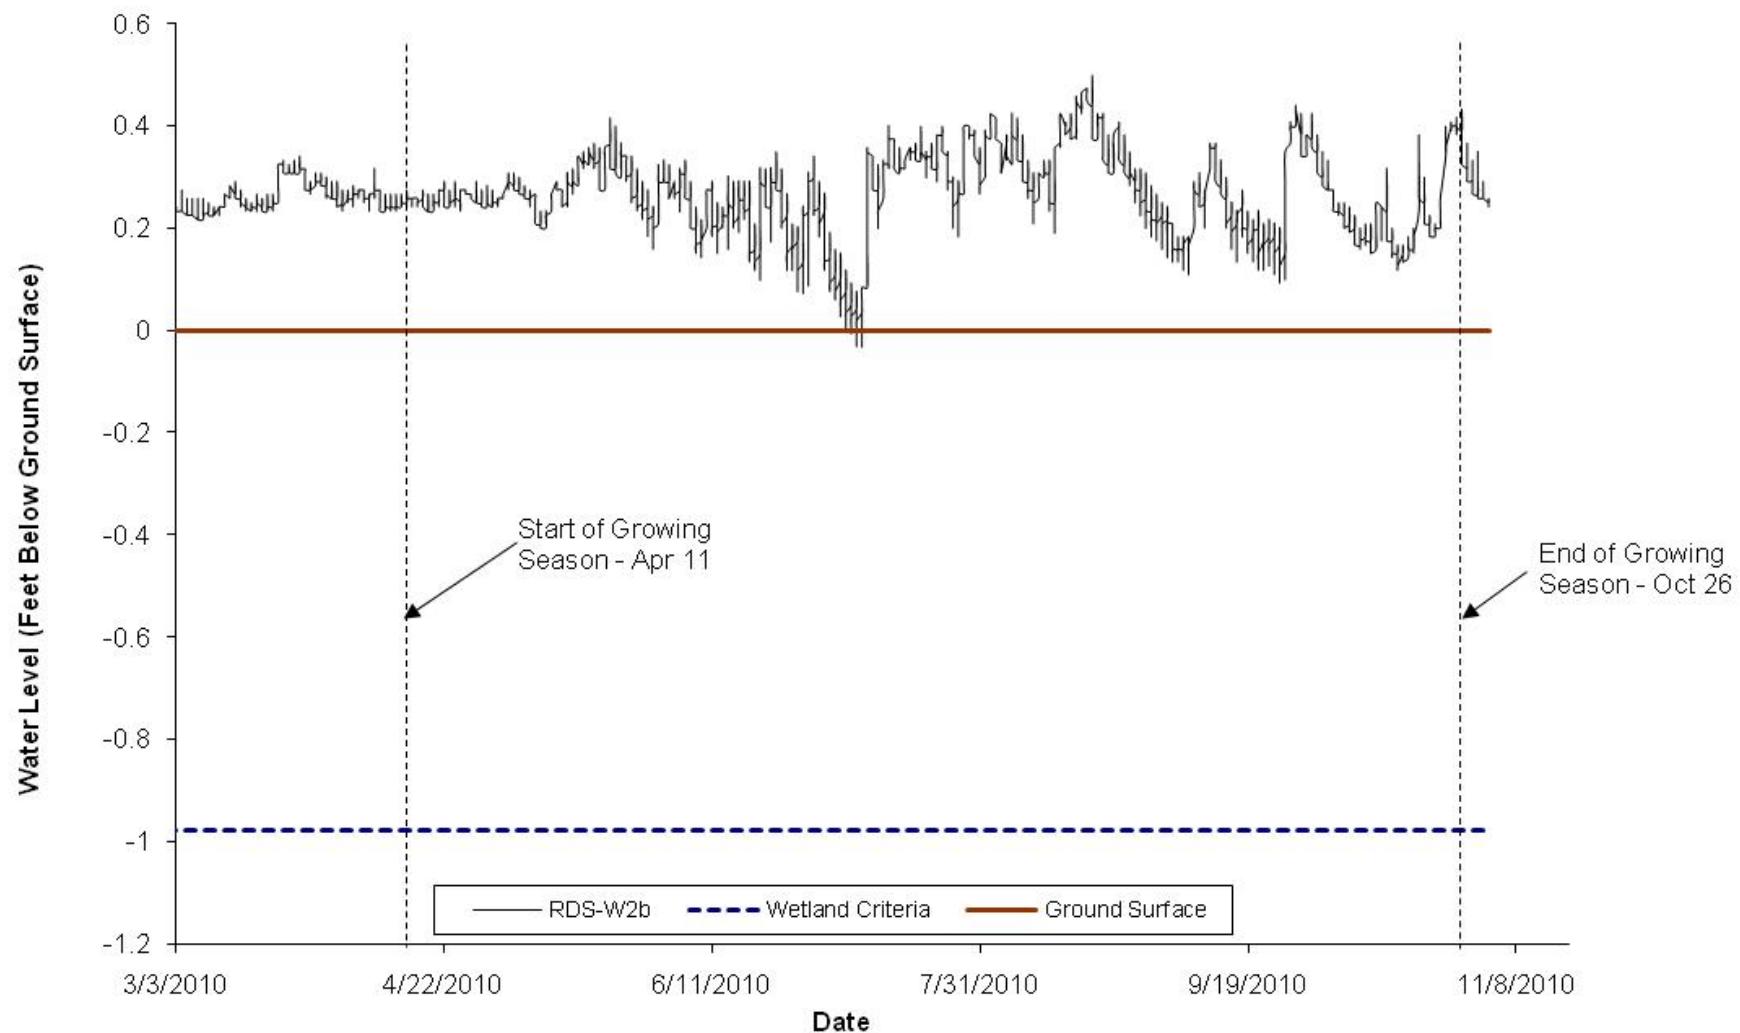

Table 13. Wetland Hydrology Criteria Attainment

| Summary of Groundwater Gauge Results for Years 1 through 5 | | | | | |
|--|---|--------------------|----------------------|----------------------|----------------------|
| Gauge | Success Criteria Achieved/Max Consecutive Days During Growing Season (Percentage) | | | | |
| | Year 1 (2006) | Year 2 (2007) | Year 3 (2008) | Year 4 (2009) | Year 5 (2010) |
| RDS-W1B | no data | yes/72 days 36% | yes/168 days 85% | yes/198 days 100% | yes/198 days 100% |
| RDS-W2B | no data | no data | yes/198 days 100% | yes/198 days 100% | yes/198 days 100% |

1. Monitoring wells did not function properly in year 1 for both wells and year 2 for RDS-W2.
2. Gauge RDS-W1B located in wetland tract W2 and Gauge RDS-W2B located in tract W1.
