1.0 EXECUTIVE SUMMARY / PROJECT ABSTRACT

The goals and objectives stated in the Unnamed Tributary to Crab Creek Restoration Plan (NCEEP 2007) are as follows:

Project Goals:

- Reduce bank sediment export and nutrient inputs to the receiving watershed of Crab Creek, a Class C Trout Water;
- Enhance and preserve riparian buffers of a headwater trout stream;
- Enhance aquatic and terrestrial habitat along an intact stream corridor;
- Improve wetland functions by connecting and expanding the following wetland communities: Swamp Forest-Bog Complex, Southern Appalachian Bog, and Montane Alluvial Forest and;
- Improve and expand Southern Appalachian Bog wetland habitat for the Bog Turtle *Clemmys muhlenburgii*.

Project Objectives:

- Restore 4,026 linear feet of stream channel with appropriate pattern, profile, and dimension to support a gravel transport system;
- Re-establish the natural stream features (bed heterogeneity) to restore aquatic habitat;
- Improve aquatic organism passage and habitat corridor continuity by replacing the culvert; and
- Convert existing croplands into Swamp Forest-Bog Complex and Southern Appalachian Bog communities.

The monitoring year four (MY4) vegetation plot data indicate that the project is not meeting the established criterion for planted stem density, which is a minimum survival of 288 planted stems per acre at the end of year four. Average stem density for planted stems in MY4 is 275 stems per acre. Six of the nine vegetation plots ($\approx 67\%$) did not meet the year three interim success criteria numbers per acre. These include VP 1, 4, 5, 6, 7, and 8; which had 121.4, 161.9, 121.4, 202.3, 283.3, and 242.3 stems per acre, respectively. However, when planted and naturally regenerated stems are combined, the average stem density is 854.3 stems per acre, with all plots meeting or exceeding the criterion. The number of native woody species ranged from 2-5 across all plots with 10 species noted site wide.

There are also approximately 20 isolated patches of high threat invasive plants that are distributed throughout the project area. Three percent of the easement acreage is comprised of these invasive plants and this percentage has remained the same since the 2011 MY2 monitoring efforts. The dominant species is multiflora rose *Rosa multiflora*; other species present include oriental bittersweet *Celastrus orbiculatus*, privet *Ligustrum sp.*, and Japanese honeysuckle *Lonicera japonica*. There also are two areas with low stem densities that are associated with the streambank erosion areas as noted below.

All cross sections have remained stable through MY4. With the exception of cross-sections 3 and 4 on the lower reach of the Unnamed Tributary, all cross sections are well vegetated and

show no signs of erosion or deterioration. Vegetation at cross sections 3 and 4 is limited due to the recent removal of beaver dams in the reach; however, shows no signs of channel instability.

Stream reach geomorphological data indicates the stream channels have remained very stable since construction. Stream longitudinal profiles also have remained stable between monitoring years. Stream channel problems observed during MY4 were minimal and consisted of six areas, totaling 240 feet, throughout all assessed reaches. Two bankfull events were documented on both UT1 and UTCC during MY4.

Beaver activity was documented on the mainstem and on the lower portion of UT1. This information was conveyed to NCEEP, who prepared a beaver removal request form that was submitted to the Animal and Plant Health Inspections Service (APHIS). Two beavers and a large food cache were removed during MY4.

Particle-size distributions remain stable, with no significant trends towards coarser or finer materials. This indicates that the channel is transporting sediment as designed.

Data from the eight groundwater monitoring stations indicated that all stations met the soil saturation criterion of groundwater being with 12 inches of the soil surfaces for at least five percent of the Hydro period during the MY4 growing season. The on-site rain gauge documented above normal precipitation during May-July. During normal rainfall years all groundwater gauges are expected to meet the minimum criteria.

In October 2013, wetland boundary delineations were performed to confirm the boundary of wetland features on the project site. A total of 16 acres of wetland were delineated within the project site. This included 7.4 acres of restoration, 3.1 acres of enhancement, 0.1 acres of creation, and 5.4 acres of preservation. The total acreage showed a 0.7 acre decline in total wetland area compared to the original baseline delineation of 16.7 acres, resulting from a 0.6 acre area and 0.1 acre area in Wetland 2 and Wetland 3, respectively, failing to meet criteria for jurisdictional wetlands. The failing area in Wetland 2 was located in the restoration area around Monitoring Well 1, which has failed to meet the hydrologic success criteria three out of four monitoring years. Additionally, this area failed to meet the hydric soil indicator. The failing area in Wetland 3, consisting of both restoration and creation, failed to meet the hydric soil indicator; which, was due to a large deposit of sand burying hydric soil.

Summary information and data related to the occurrence of items such as beaver or easement encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in these reports can be found in the mitigation and restoration plan documents available on NCEEP's website. All raw data supporting tables and figures in the appendices are available from NCEEP upon request.

2.0 Methodology

The stream monitoring methodologies utilized in MY4 replicate those employed during the previous monitoring years and are based on standard guidance and procedures documents (Rosgen 1996; USACE 2003).

Vegetation plot monitoring data were collected following the standard CVS-EEP Protocol for Recording Vegetation, Level II, Version 4.2 (Lee et al. 2008).

Wetland hydrology was considered established if groundwater monitoring data indicated saturated soils within 12 inches of the soil surface for 5% of the Hydro period. Due to the Alleghany County data set being based on a site with elevations approximately 1,000 feet different from the project site, the growing season for the site was based on the Natural Resource Conservation Service (NRCS) data set for Ashe County (NRCS 2009). During October 2013, a wetland boundary delineation was performed to confirm the presence of wetland features on the project site. The delineation utilized the Level II Routine Wetland Determination method as defined in the 1987 USACE Wetlands Delineation Manual and the 2010 USACE Interim Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region.

Appendix A

Project Vicinity Map and Background Tables

The subject project site is an environmental restoration site of the NCDENR Ecosystem Enhancement Program (NCEEP) and is encompassed by a recorded conservation easement, but is bordered by land under private ownership. Accessing the site may require traversing areas near or along the easement boundary and therefore access by the general public is not permitted. Access by authorized personnel of state and federal agencies or their designees/contractors involved in the development, oversight and stewardship of the restoration site is permitted within the terms and timeframes of their defined roles. Any intended site visitation or activity by any person outside of these previously sanctioned roles and activities requires prior coordination with NCEEP.

| | | 2. Thalweg centering at downstream of meander bend (Glide). | 4 | 4 | | | 100% | | | |
| 2. Bank | 1. Scoured / Eroding | Bank lacking vegetative cover resulting simply from poor growth and/or scour and erosion. | | | 1 | 18 | 98% | 0 | 0 | 98% |
| | 2. Undercut | Banks undercut/overhanging to the extent that mass wasting appears likely. Does <u>NOT</u> include undercuts that are modest, appear sustainable and are providing habitat. | | | 0 | 0 | 100% | 0 | 0 | 100% |
| | 3. Mass Wasting | Bank slumping, calving, or collapse. | | | 0 | 0 | 100% | 0 | 0 | 100% |
| | | | | Totals | 1 | 18 | 98% | 0 | 0 | 98% |
| 3. Engineered Structures | 1. Overall Integrity | Structures physically intact with no dislodged boulders or logs. | 5 | 5 | | | 100% | | | |
| | 2. Grade Control | Grade control structures exhibiting maintenance of grade across the sill. | 5 | 5 | | | 100% | | | |
| | 2a. Piping | Structures lacking any substantial flow underneath sills or arms. | 5 | 5 | | | 100% | | | |
| | 3. Bank Protection | Bank erosion within the structures extent of influence does <u>NOT</u> exceed 15%. | 5 | 5 | | | 100% | | | |
| | 4. Habitat | Pool forming structures maintaining ~ Max Pool Depth : Mean Bankfull Depth Ratio ≥ 1.6 . Rootwads/logs providing some cover at base-flow. | 5 | 5 | | | 100% | | | |

Table 5. Visual Stream Morphology Stability Assessment
UT Crab Creek Stream & Wetland / Project No. 857 - UTCC - US
Assessed Length 2,485 feet

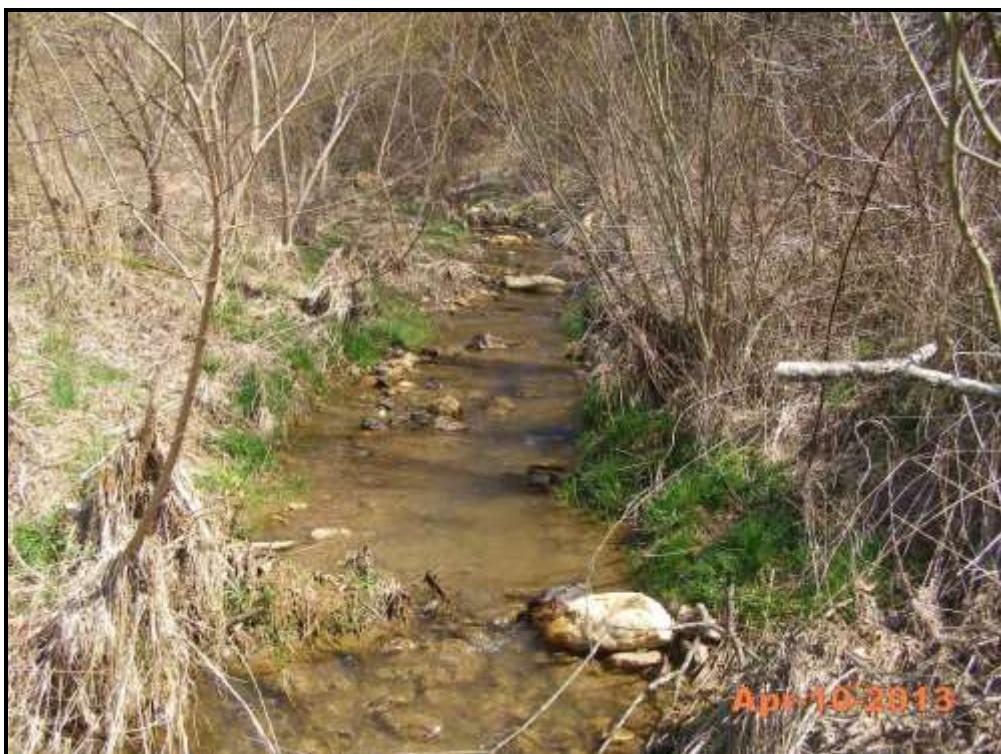

| Major Channel Category | Channel Sub-Category | Metric | Number Stable, Performing as Intended | Total Number in As-built | Number of Unstable Segments | Amount of Unstable Footage | % Stable, Performing as Intended | Number with Stabilizing Woody Vegetation | Footage with Stabilizing Woody Vegetation | Adjusted % for Stabilizing Woody Vegetation |
|---------------------------------|--|---|---------------------------------------|--------------------------|-----------------------------|----------------------------|----------------------------------|--|---|---|
| 1. Bed | 1. Vertical Stability (Riffle and Run Units) | 1. <u>Aggradation</u> - Bar formation/growth sufficient to significantly deflect flow laterally (not to include point bars). | | | 0 | 0 | 100% | | | |
| | | 2. <u>Degradation</u> - Evidence of downcutting. | | | 0 | 0 | 100% | | | |
| | 2. Riffle Condition | 1. <u>Texture/Substrate</u> - Riffle maintains coarser substrate. | 17 | 17 | | | 100% | | | |
| | 3. Meander Pool Condition | 1. <u>Depth</u> Sufficient (Max Pool Depth : Mean Bankfull Depth ≥ 1.6). | 15 | 15 | | | 100% | | | |
| | | 2. <u>Length</u> appropriate (>30% of centerline distance between tail of upstream riffle and head of downstream riffle). | 15 | 15 | | | 100% | | | |
| | 4. Thalweg Position | 1. Thalweg centering at upstream of meander bend (Run). | 15 | 15 | | | 100% | | | |
| | | 2. Thalweg centering at downstream of meander bend (Glide). | 15 | 15 | | | 100% | | | |
| 2. Bank | 1. Scoured / Eroding | Bank lacking vegetative cover resulting simply from poor growth and/or scour and erosion. | | | 2 | 101 | 98% | 0 | 0 | 98% |
| | 2. Undercut | Banks undercut/overhanging to the extent that mass wasting appears likely. Does <u>NOT</u> include undercuts that are modest, appear sustainable and are providing habitat. | | | 0 | 0 | 100% | 0 | 0 | 100% |
| | 3. Mass Wasting | Bank slumping, calving, or collapse. | | | 1 | 21 | 100% | 1 | 21 | 100% |
| | | | Totals | 3 | 122 | 98% | 1 | 21 | 98% | |
| 3. Engineered Structures | 1. Overall Integrity | Structures physically intact with no dislodged boulders or logs. | 7 | 7 | | | 100% | | | |
| | 2. Grade Control | Grade control structures exhibiting maintenance of grade across the sill. | 7 | 7 | | | 100% | | | |
| | 2a. Piping | Structures lacking any substantial flow underneath sills or arms. | 7 | 7 | | | 100% | | | |
| | 3. Bank Protection | Bank erosion within the structures extent of influence does <u>NOT</u> exceed 15%. | 7 | 7 | | | 100% | | | |
| | 4. Habitat | Pool forming structures maintaining ~ Max Pool Depth : Mean Bankfull Depth Ratio ≥ 1.6 . Rootwads/logs providing some cover at base-flow. | 7 | 7 | | | 100% | | | |

| Table 6. Vegetation Condition Assessment UT Crab Creek Stream & Wetland / Project No. 857 Planted Acreage 15.4 | | | | | |
|---|---|---|---------------------------|-------------------------|------------------------------|
| Vegetation Category | Definitions | CCPV Depiction | Number of Polygons | Combined Acreage | % of Planted Acreage |
| 1. Bare Areas | Very limited cover of both woody and herbaceous material. | N/A | 0 | 0.00 | 0% |
| 2. Low Stem Density Areas | Woody stem densities clearly below target levels based on MY3, 4, or 5 stem count criteria. | Stipple Black Dots White Background | 2 | 0.06 | <1% |
| | | Totals | 2 | 0.06 | 0% |
| 3. Areas of Poor Growth Rates or Vigor | Areas with woody stems of a size class that are obviously small given the monitoring year. | N/A | 0 | 0.00 | 0% |
| | | Cumulative Totals | 2 | 0.06 | 0% |
| Easement Acreage 47.8 | | | | | |
| Vegetation Category | Definitions | CCPV Depiction | Number of Polygons | Combined Acreage | % of Easement Acreage |
| 4. Invasive Areas of Concern | Areas or points (if too small to render as polygons at map scale). | Cross Hatch (Red - Dense/Yellow - Present) | 20 | 1.63 | 3% |
| 5. Easement Encroachment Areas | Areas or points (if too small to render as polygons at map scale). | Stipple Orange Dots White Background & ATV Trail | 3 | 0.46 | <1% |

|--|---|
| Report Prepared By | Owen Carson |
| Date Prepared | 8/13/2013 10:39 |
| Database Name | Equinox-2013-A-UTCrab-MY4.mdb |
| Database Location | Z:\ES\NRI&M\EEP Monitoring\UT Crab Creek\UTC-MY4-2013\Data\Veg |
| Computer Name | D16TNK71 |
| File Size | 46755840 |
| DESCRIPTION OF WORKSHEETS IN THIS DOCUMENT----- | |
| Metadata | Description of database file, the report worksheets, and a summary of project(s) and project data. |
| Proj. Planted | Each project is listed with its PLANTED stems per acre, for each year. This excludes live stakes. |
| Proj. Total Stems | Each project is listed with its TOTAL stems per acre, for each year. This includes live stakes, all planted stems, and all natural/volunteer stems. |
| Plots | List of plots surveyed with location and summary data (live stems, dead stems, missing, etc.). |
| Vigor | Frequency distribution of vigor classes for stems for all plots. |
| Vigor by Spp | Frequency distribution of vigor classes listed by species. |
| Damage | List of most frequent damage classes with number of occurrences and percent of total stems impacted by each. |
| Damage by Spp | Damage values tallied by type for each species. |
| Damage by Plot | Damage values tallied by type for each plot. |
| Planted Stems by Plot and Spp | A matrix of the count of PLANTED living stems of each species for each plot; dead and missing stems are excluded. |
| ALL Stems by Plot and spp | A matrix of the count of total living stems of each species (planted and natural volunteers combined) for each plot; dead and missing stems are excluded. |
