1.0 EXECUTIVE SUMMARY / PROJECT ABSTRACT

The North Carolina Ecosystem Enhancement Program (EEP) restored, enhanced, and preserved wetlands and restored a headwater wetland valley, which is analogous to a stream in this setting, at the UT Pembroke Site in Chowan County, North Carolina. The 59-acre site is located within the USGS 8-digit HUC 03010205 of the Pasquotank River Basin. These assets and their acreage totals were revised by the EEP during the summer of 2009, with the revised totals reflected in Table 1 of this report. The project goals and objectives are listed below.

Goal: Modify the channelized water features, based on reference conditions, with the intent to restore the site's primary wetland functions such as nutrient cycling, flood storage, and wildlife habitat.

Objectives:

- Improve water quality in the basin by filtering nutrients through on-site wetlands.
- Buffer flood flows downstream by increasing infiltration and storage areas.
- Design a waterway through the wetland complex with appropriate cross-section, slope, and pattern as to provide nutrient filtering, flood storage, and wildlife habitat while meeting the appropriate success criteria for the wetland.
- Improve terrestrial and aquatic habitat diversity.
- Establish a contiguous buffer along the project that can serve as a migration corridor for local fauna.

The restored wetlands and headwater wetland valley were planted with one of three different planting zones, each with various species of bare root trees and shrubs. Following the CVS-EEP protocol, sixteen vegetation monitoring plots were established during the baseline data collection immediately after the site was planted. Plot number 14 was damaged during road maintenance and was reset in the same location during the second year of monitoring. The fourth year of monitoring found a site average of 207 planted stems/acre, with nine of the sixteen vegetation monitoring plots having planted stem densities less than the five-year success criteria of 260 stems/acre. The site's average total stem density including volunteers is 1,189 stems/acre, with four of the sixteen vegetation plots having densities less than the five-year success criteria. The only exotic species identified at the site are parrotfeather (*Myriophyllum aquaticum*), which is present in areas of open standing water, honeysuckle (*Lonicera japonica*), which is scattered throughout the site, and privet (*Ligustrum sinense*), which is predominantly found in the enhancement wetland. Some parts of the site have large cattail (*Typha latifolia*) populations, which may outcompete desirable vegetation and become problematic. There are also areas where the *Juncus effusus* is growing so vigorously that there are no planted stems in the surrounding area. Supplemental planting of the site was conducted in December of 2011.

The restored headwater wetland valley is stable. In the parts of the site where there are large areas of standing water, the feature becomes less visually defined, but there is still active flow of water across the site. A maintenance plan to increase the rate of draw down through the site was implemented in the fall of 2011. This maintenance included adding a new road crossing and the removal of the top level of the drop down structure. A supplemental report detailing the maintenance actions will be created in the spring of 2012.

Fifteen groundwater monitoring wells have been established to monitor wetland hydrology. Of these wells, five (4, 5, 6, 9, and 13) were installed in restored wetlands, two (2 and 3) were installed in enhanced wetlands, five (7, 8, 10, 11, and 15) were installed in the headwater wetland valley, and two (12 and 16) were installed in the preserved wetlands as reference wells. An additional monitoring well, Monitoring Well 17, was installed in the restored wetland in April 2009. In June 2010, four more

monitoring wells, Monitoring Wells 18, 19, 20, and 21, were installed. During the site's fourth growing season, 15 of the 17 wells in the restoration and enhancement areas met the success criterion of having saturated soil conditions occurring within 12 inches of the ground surface for a minimum continuous period of 5% (13 days) of the 263 day growing season (March 10 to November 28) during average climatic conditions. The daily rainfall data obtained from a local weather station shows that the area had average rainfall during the 2011 growing season. The wells that did not meet the success criteria - Wells 2 and 4 - each had water above the jurisdictional depth for a maximum of four and ten consecutive days, respectively. Monitoring Well 2 is in the enhanced wetland and Well 4 is in the restored non-riparian wetland.

Summary information/data related to the occurrence of items such as beaver or encroachment and statistics related to performance of various project and monitoring elements can be found in the tables and figures in the report appendices. Narrative background and supporting information formerly found in these reports can be found in the Baseline Monitoring Report (formerly Mitigation Plan) and in the Mitigation Plan (formerly the Restoration Plan) documents available on the EEP's website. All raw data supporting the tables and figures in the appendices are available from the EEP upon request.

2.0 METHODOLOGY

The cross-sections are surveyed with a total station instrument and stationed according to the distance between survey shots. The stationing is then adjusted to match significant topography changes from the previous year's cross-sections.

The Level 2 of the CVS-EEP protocol (<http://cvs.bio.unc.edu/methods.htm>) was used to collect vegetation data from the UT Pembroke site.

DESCRIPTION OF WORKSHEETS IN THIS DOCUMENT-----	
Metadata	Description of database file, the report worksheets, and a summary of project(s) and project data.
Proj, planted	Each project is listed with its PLANTED stems per acre, for each year. This excludes live stakes.
Proj, total stems	Each project is listed with its TOTAL stems per acre, for each year. This includes live stakes, all planted stems, and all natural/volunteer stems.
Plots	List of plots surveyed with location and summary data (live stems, dead stems, missing, etc.).
Vigor	Frequency distribution of vigor classes for stems for all plots.
Vigor by Spp	Frequency distribution of vigor classes listed by species.
Damage	List of most frequent damage classes with number of occurrences and percent of total stems impacted by each.
Damage by Spp	Damage values tallied by type for each species.
Damage by Plot	Damage values tallied by type for each plot.
Planted Stems by Plot and Spp	A matrix of the count of PLANTED living stems of each species for each plot; dead and missing stems are excluded.
ALL Stems by Plot and spp	A matrix of the count of total living stems of each species (planted and natural volunteers combined) for each plot; dead and missing stems are excluded.

Groundwater Monitoring Well #20

UT Pembroke MY04
Groundwater Monitoring Well #21

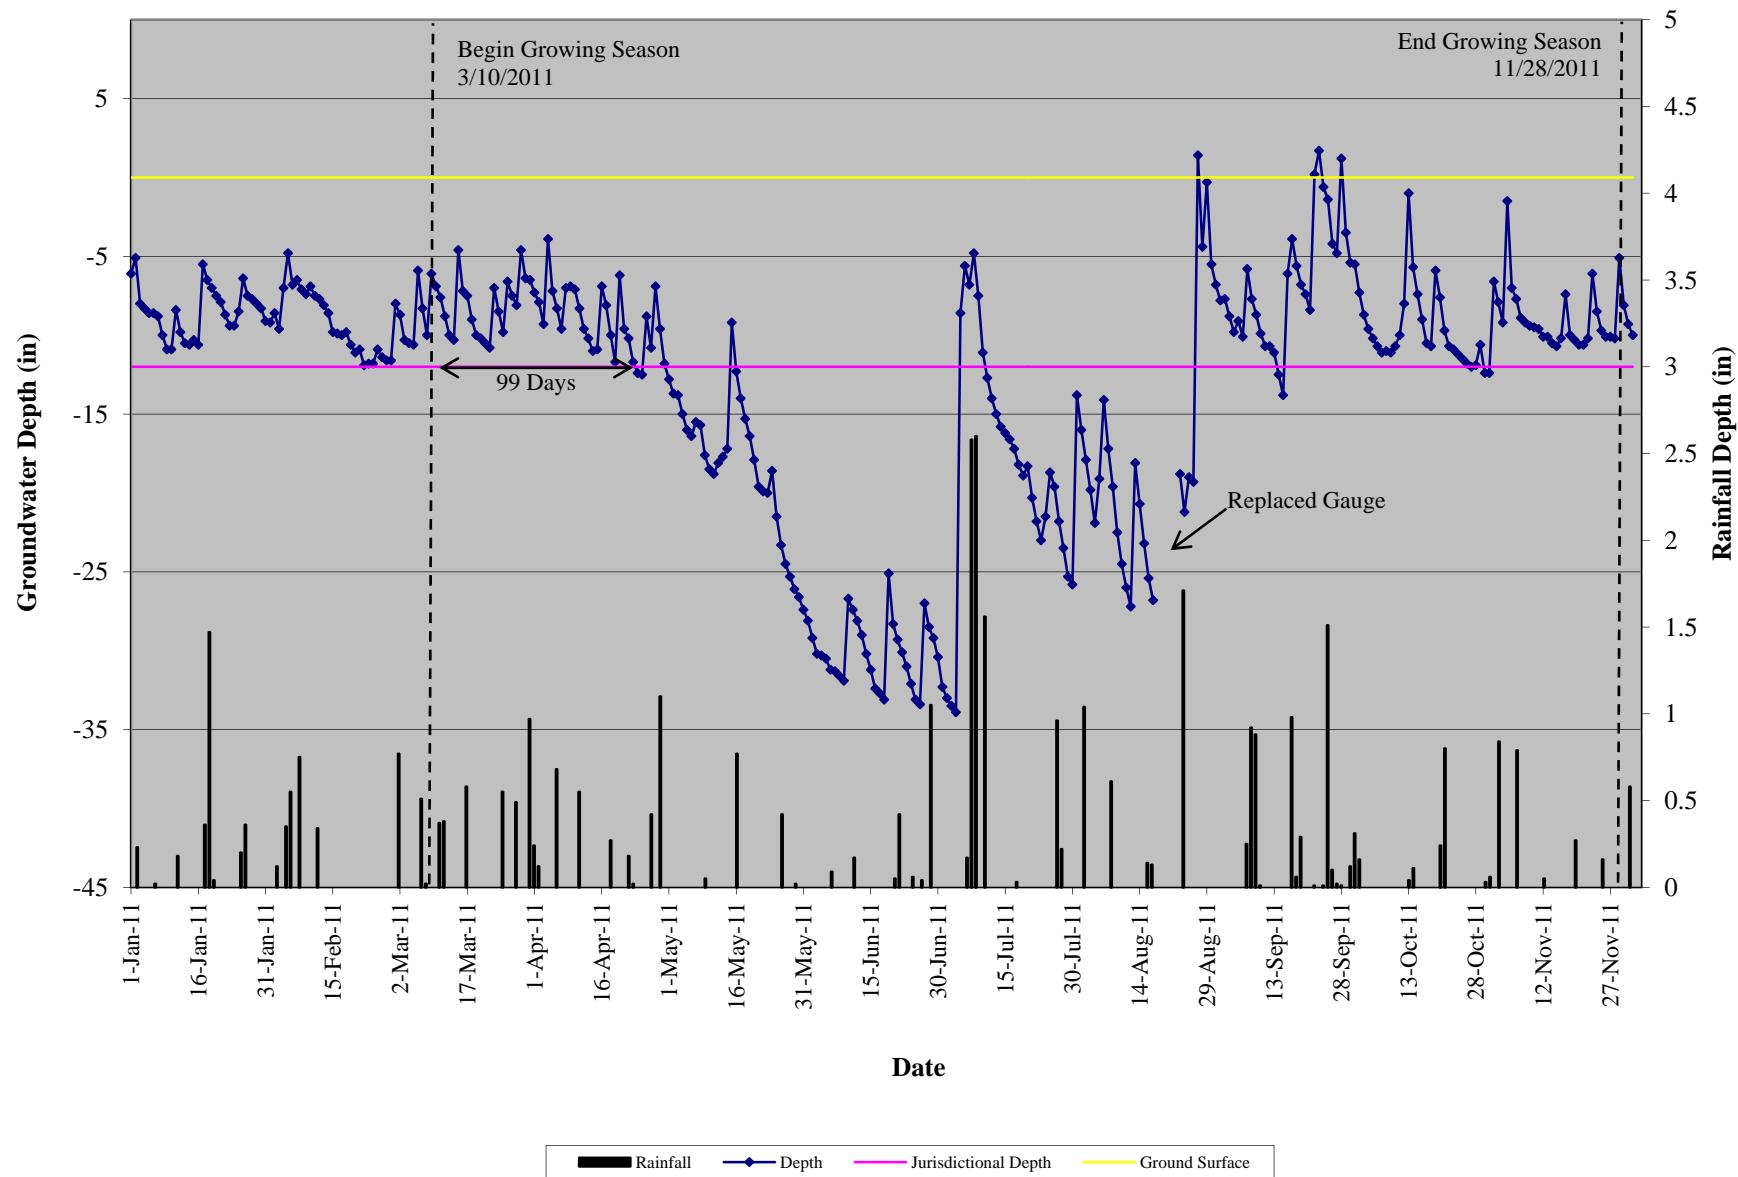

Table 9. Wetland Hydrology Criteria Attainment Table
Project Number and Name: 283 - UT Pembroke

Gauge	Success Criteria Achieved / Max Consecutive Days During Growing Season (Percentage)			
	Year 1 (2008)	Year 2 (2009)	Year 3 (2010)	Year 4 (2011)
Well 2	No/0 (0%)	No/4 (1.5%)	No/4 (1.5%)	No/4 (1.5%)
Well 3	No/0 (0%)	No/4 (1.5%)	No/5 (1.9%)	Yes/13 (5.0%)
Well 4	No/0 (0%)	No/4 (1.5%)	No/6 (2.3%)	No/10 (3.8%)
Well 5	No/11 (4.2%)	Yes/49 (18.6%)	Yes/54 (20.5%)	Yes/23 (8.7%)
Well 6	No/12 (4.6%)	Yes/46 (17.5%)	Yes/50 (19.0%)	Yes/17 (6.4%)
Well 7	Yes/87 (33.1%)	Yes/108 (41.1%)	Yes/104 (39.5%)	Yes/95 (36.0%)
Well 8	No/11 (4.8%)	Yes/45 (17.1%)	Yes/42 (16.0%)	Yes/47 (17.8%)
Well 9	Yes/51 (19.4%)	Yes/49 (18.6%)	Yes/57 (21.7%)	Yes/94 (35.6%)
Well 10	Yes/207 (78.7%)	Yes/110 (41.8%)	Yes/103 (39.2%)	Yes/101 (38.3%)
Well 11	Yes/107 (40.7%)	Yes/263 (100%)	Yes/138 (52.5%)	Yes/147 (55.7%)
Well 12 <i>Reference</i>	Yes/77 (29.3%)	Yes/53 (20.2%)	Yes/55 (20.9%)	Yes/59 (22.3%)
Well 13	No/10 (3.8%)	Yes/31 (11.8%)	Yes/39 (14.8%)	Yes/37 (14.0%)
Well 15	Yes/174 (66.2%)	Yes/107 (40.7%)	Yes/133 (50.6%)	Yes/146 (55.3%)
Well 16 <i>Reference</i>	Yes/112 (43%)	Yes/87 (33.1%)	Yes/120 (45.6%)	Yes/101 (38.3%)
Well 17	N/A	N/A	Yes/140 (53.2%)	Yes/101 (38.3%)
Well 18	N/A	N/A	Yes/63 (24.0%)	Yes/59 (22.3%)
Well 19	N/A	N/A	Yes/61 (23.2%)	Yes/99 (37.5%)
Well 20	N/A	N/A	Yes/63 (24.0%)	Yes/99 (37.5%)
Well 21	N/A	N/A	Yes/25 (9.5%)	Yes/99 (37.5%)
