

Inactive Hazardous Sites Branch
CTS of Asheville Summary
(NCD003149556/Former APS# 20358)
Mills Gap Road, Buncombe County

This is the November, 2010 update of activities directed by the N.C. Department of Environment and Natural Resources that CTS is performing at the Mills Gap Road site in Asheville.

November 2010 Update:

NCDENR inquired about the progress of the Phase II work currently underway on the CTS site. CTS's update to NCDENR indicated that the most recent field work portion of the investigation had taken more time than expected due to difficulties in collecting soil samples during hand augering and drilling activities, encountering more subsurface rock than was expected, and laboratory equipment problems delaying sample results. The soil sampling (Phase IIA) field however, is now complete and a "Report of Phase IIA Remedial Investigation" is nearing completion and should be delivered to NCDENR before Thanksgiving.

Once the report has been received it will be reviewed and comments made back to CTS regarding the next Phase of work to be completed.
