

MEMORANDUM

To: Billy Meyer

From: Christie Zawtocki, PE
Greg Kanellis, PE

Date: September 19, 2017

Project: One Hour Martinizing Site, DSCA ID #DC320013
1103 W Club Blvd, Durham, NC

Subject: Project Update

Hart & Hickman, PC (H&H) is submitting this update regarding activities completed at the One Hour Martinizing site between March 2017 and August 2017. The additional assessment activities included the following:

- March 2017 – soil gas and indoor air sampling at 1419 and 1421 Dollar Ave
- July 2017 – limited groundwater monitoring event
- July 2017 – soil gas sampling near two commercial buildings north of the source property (Northgate Auto Service and Northgate Mall)
- August 2017 – soil gas sampling at one residential property (1421 Dollar Ave) east of the source property

A brief summary of these assessment activities and results is provided below.

March 2017 Soil Gas and Indoor Air Sampling Activities and Results

As discussed in the previous project update dated March 7, 2017, PCE groundwater concentrations increased in January 2017 in monitoring wells MW-14S and MW-16S located on residential properties to the east of the former dry-cleaning facility. Due to these increases, the DSCA Program decided to collect soil gas samples on three residential properties (1417, 1419, and 1421 Dollar Ave) and indoor air samples from two residences (1419 and 1421 Dollar Ave) as a conservative measure to re-evaluate potential vapor intrusion risk.

In March 2017, H&H collected soil gas samples from three permanent soil gas monitoring points on the 1417 (SV-37S), 1419 (SV-18), and 1421 Dollar Ave (SV-19) properties and collected indoor air samples from the basements and first floors of the 1419 and 1421 Dollar Ave residences. H&H collected two 7-day indoor air samples from each residence using passive Radiello sampling devices between March 22 and 29, 2017. At each residence, one sample was collected from the first floor (1419-UP & 1421-UP), and one sample was collected from the basement (1419-DOWN & 1421-DOWN). The soil gas and indoor air samples were analyzed for

PCE, trichloroethylene (TCE), cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), and vinyl chloride (VC).

Similar to historical results, high PCE concentrations were detected in each of the soil gas samples with concentrations ranging from 18,000 µg/m³ (SV-19 at 1421 Dollar Ave) to 150,000 µg/m³ (SV-18 at 1419 Dollar Ave). PCE concentrations in SV-18 and SV-19 were within the range of historical data, and the concentration in SV-37S was slightly higher. Low estimated concentrations of TCE were also detected in SV-18 and SV-37S. The calculated carcinogenic risks and non-carcinogenic hazard index values associated with the detected soil gas concentrations exceeded 1.0E-05 and 1, respectively. The soil gas sampling results are summarized in Table 1 and presented on Figure 1.

Indoor air samples collected from the 1419 and 1421 Dollar Ave residences only contained low concentrations of PCE ranging from 0.17 µg/m³ (1419-UP) to 2.2 µg/m³ (1421-UP). The calculated risks associated with the detected indoor air samples were well within acceptable levels. Indoor air at the 1417 Dollar Avenue residence has previously been assessed on three occasions in 2010 and 2015, and the concentrations were within acceptable levels. The indoor air sampling results for 1419 and 1421 Dollar Ave are summarized in Table 2 and presented on Figure 2.

July 2017 Groundwater Sampling Activities and Results

On July 6, 2017, H&H completed a limited groundwater sampling event to evaluate groundwater concentrations to the east and southeast of the source property where previous PCE concentration increases were observed. Activities included collecting groundwater samples from monitoring wells MW-7, MW-14S, MW-16S, and MW-17S. Figure 3 depicts the monitoring well locations.

The groundwater samples were analyzed for volatile organic compounds (VOCs). Field measurements of dissolved oxygen (DO), oxidation-reduction potential (ORP), temperature, pH, and conductivity were also collected. The VOC analytical results for the sampled monitoring wells are summarized in Table 3, along with historical data. The results for the field parameters are summarized in Table 4.

The primary constituent of concern at the site is the dry-cleaning solvent PCE. PCE was detected in monitoring wells MW-14S (east of the source property) and MW-16S (southeast of the source property). PCE was not detected in monitoring wells MW-7 or MW-17S. A graph of PCE concentration versus time for impacted wells MW-14S and MW-16S is provided in Attachment A. As shown in the graphs, PCE concentrations in monitoring wells MW-14S and MW-16S appear to be increasing over time. In MW-14S, PCE concentrations increased from 0.805 µg/L in January 2017 to 2.02 µg/L in July 2017. In MW-16S, PCE concentrations increased from 0.420 µg/L in January 2017 to 0.532 µg/L in July 2017. The PCE degradation product TCE was detected at a low concentration of 0.00153 µg/L in monitoring well MW-14S. No other PCE degradation products were detected in samples collected during the July 2017 sampling event.

Due to the limited number of monitoring wells sampled, PCE groundwater plume maps were not prepared; however, the sampling results are shown on Figure 4.

July 2017 Soil Gas Sampling Activities and Results

In July 2017, H&H installed and sampled five temporary soil gas monitoring points to evaluate potential vapor intrusion risks at two properties located to the north of the One Hour Martinizing source property. The properties that were evaluated included commercial properties at 1056 West Club Boulevard (Northgate Mall) and 1130 West Club Boulevard (Northgate Auto Service). The soil gas samples were analyzed for PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and VC.

Northgate Mall (1056 West Club Boulevard) – Three soil gas samples (SV-58 through SV-60) were collected in the parking lot area south of the Macy's building. PCE was detected in each sample at concentrations ranging from 100 µg/m³ (SV-58) to 210 µg/m³ (SV-60). Risk calculations indicated acceptable levels (carcinogenic risk <1.0E-05 and HI <1) under the current non-residential use and potential future residential use scenarios; thus, there are no unacceptable exposure risks.

Northgate Auto Service (1130 West Club Boulevard) – One soil gas sample (SV-56) was collected adjacent to the commercial building located north of the source property. H&H attempted to collect a second sample (SV-57), but water entered the sampling point and prohibited sampling. PCE was detected in sample SV-56 at a concentration of 160 µg/m³. Degradation products cis-1,2-DCE, trans-1,2-DCE, and VC were detected at concentrations of 84 µg/m³, 23 µg/m³, and 330 µg/m³, respectively. Risk calculations indicated acceptable levels under the current non-residential use; thus, there are no current unacceptable exposure risks.

The soil gas sampling results are summarized in Table 1 and presented on Figure 1. Based on the results, no additional vapor intrusion assessment activities are planned for these properties.

August 2017 Soil Gas Sampling Activities and Results

In August 2017, H&H collected soil gas samples from two permanent soil gas monitoring points (SV-22S & SV-24S) to evaluate current soil gas concentrations on the 1421 Dollar Ave property near the adjacent 1425 Dollar Ave property due to increased groundwater concentrations observed during the July 2017 sampling event (discussed above). PCE was detected in each sample at concentrations of 74 µg/m³ (SV-24S) and 1,100 µg/m³ (SV-22S). Risk calculations indicated acceptable levels (carcinogenic risk <1.0E-05 and HI <1) under the current residential use scenario; thus, no additional sampling is planned. The soil gas sampling results are summarized in Table 1 and presented on Figure 1.

Future Sampling Activities

The following additional sampling activities are planned through January 2018.

Groundwater

The monitoring requirements associated with the UIC permit for the injection activities have been fulfilled. The DSCA Program plans to conduct a limited groundwater sampling event in January 2018 to continue to monitor PCE concentration trends. The January 2018 event will include collecting groundwater samples from the following monitoring wells:

- Source property: MW-3R, MW-4R, MW-22S/I, MW-23S/I, MW-24S
- North of source property: MW-11
- East of source property: MW-14S/I, MW-16S
- South of source property: MW-15S

The samples will be analyzed for VOCs and will be field measured for DO, ORP, temperature, pH, and conductivity.

Soil Gas

Based on the soil gas sampling results from March, July, and August 2017, no additional soil gas assessment is planned at this time. If site conditions change, the need for additional soil gas sampling will be reevaluated.

Indoor Air

Vapor intrusion mitigation system are operating at 1414 Watts St, 1419 Dollar Ave, and 1421 Dollar Ave. The systems at 1419 and 1421 Dollar Ave include telemetry (digital notification), which will notify H&H via email if the systems malfunction. Operation and maintenance of the telemetry systems will continue and will include site visits, if needed, to confirm proper operation of the systems if any notifications are received. Indoor air data for these properties confirm that the mitigation systems are effectively reducing indoor air concentrations and routine indoor air sampling is no longer necessary. Thus, additional indoor air sampling is not planned at this time. If site conditions change, the need for additional indoor air sampling will be reevaluated.

DWM Residential IASLs					NE	8.34	NE	0.417	1.68

Notes:

1. "R" denotes residence.
2. "SU" denotes Summa canister. "P" denotes passive sampler.
3. Division of Waste Management (DWM) Residential and Non-Residential Indoor Air Screening Levels (IASLs) at Target Risk = 1.0E-05 dated October 2016 are provided for reference.
4. NE = Not Established
5. J denotes estimated concentration between laboratory reporting limit and method detection limit.
6. C denotes estimated concentration due to calculated sampling rate.
7. Additional vapor mitigation measures were completed at 1419 & 1421 Dollar Ave on May 12, 2014.

Notes:																						
1. Bold concentration exceeds NC 2L Groundwater Quality Standard (April 2013) or Interim Maximum Allowable Concentration (if 2L Standard not established).																						
2. J flag denotes estimated concentration between laboratory reporting limit and method detection limit.																						
3. NA = Not Analyzed; N/A = Not Available; BDL = Below Detection Limit (detection limits not available); NE = Not Established

Notes:

1. **Bold** concentration exceeds NC 2L Groundwater Quality Standard (April 2013) or Interim Maximum Allowable Concentration (if 2L Standard not established).

2. J flag denotes estimated concentration between laboratory reporting limit and method detection limit.

3. NA = Not Analyzed; N/A = Not Available; BDL = Below Detection Limit (detection limits not available); NE = Not Established

Table 4: Analytical Data for Natural Attenuation Parameters
