

**North Carolina Department of Environmental Quality**

**August 3, 2023**

**Animal Feeding Operations General Permit Renewal**  
**Draft Environmental Justice Report**

It is the policy of the North Carolina Department of Environmental Quality (DEQ) that no person shall, on the grounds of race, religion, color, national origin, ethnicity, sex, pregnancy, gender identity or expression, sexual orientation, age, political affiliation, National Guard or veteran status, genetic information, or disability be excluded from participation in, be denied the benefits of or be subjected to discrimination under Title VI of the Civil Rights Act of 1964, the Civil Rights Restoration Action of 1987, the Rehabilitation Act of 1973, and all other pertinent nondiscrimination laws and regulations.

In conducting this analysis, the Environmental Justice Program pursues DEQ's mission to "Provide science-based environmental stewardship for the health and prosperity of all North Carolinians" and advance EJ in DEQ's activities.

## Glossary

TERM	DEFINITION
Age	The length of time in completed years that a person has lived.
Animal Feeding Operation (AFO)	Agricultural feedlot activity, including confined feeding, breeding, raising, and holding of animals in lots or buildings specifically designed as confinement areas, in which animal waste may accumulate or plant cover cannot be maintained. <sup>1</sup> To be classified as an Animal Feeding Operation, feedlots would involve a minimum of 250 swine, 100 confined cattle, 75 horses, 1,000 sheep, or 30,000 poultry with a liquid waste management system.
Block Group	A block is the smallest geographic unit for which the Census Bureau tabulates decennial census data. Statistical divisions of census tracts, are generally defined to contain between 600 and 3,000 people and are used to present data and control block numbering. A block group consists of clusters of blocks within the same census tract that have the same first digit of their four-digit census block number.
Cattle AFO	Animal feeding operation involving 100 or more confined cattle (sometimes referred to as cows).
Census Tract	A small, relatively permanent statistical subdivision of a county delineated by a local committee of census data users for the purpose of presenting data. Census tracts ideally contain about 4,000 people and 1,600 housing units.  Small, relatively permanent statistical subdivisions of a county or statistically equivalent entity that can be updated by local participants prior to each decennial census as part of the Census Bureau's Participant Statistical Areas Program. Census tracts generally have a population size between 1,200 and 8,000 people, with an optimum size of 4,000 people. A census tract usually

<sup>1</sup> NC Gen Stat § 143-215.10B (2022)

[https://www.ncleg.net/enactedlegislation/statutes/html/bysection/chapter\\_143/gs\\_143-215.10b.html](https://www.ncleg.net/enactedlegislation/statutes/html/bysection/chapter_143/gs_143-215.10b.html).

	covers a contiguous area; however, the spatial size of census tracts varies widely depending on the density of settlement. Census tracts occasionally are split due to population growth or merged as a result of substantial population decline.
Civil Rights Restoration Action of 1987	Amends several anti-discrimination laws, including the Civil Rights Act of 1964, to define the phrase "program or activity" and the term "program" to mean <i>all operations</i> of a (non-religious) entity that receives Federal financial assistance.
Disability	A long-lasting physical, mental, or emotional condition. This condition can make it difficult for a person to do activities such as walking, climbing stairs, dressing, bathing, learning, or remembering. This condition can also impede a person from being able to go outside the home along or to work at a job or business.
Disproportionate Effects	Term used in Executive Order 12898 to describe situations of concern where there exists significantly higher and more adverse health and environmental effects on minority populations, low-income populations, or indigenous peoples.
Environmental Justice (EJ)	The fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.
Hazardous Air Pollutants	Also known as toxic air pollutants or air toxics; substances released into the air that can cause cancer, reproductive/birth effects, and other serious health and environmental effects. <sup>2</sup>
Income	The money income received on a regular basis (exclusive of certain money receipts such as capital gains and lump-sum payments) before payments for personal income taxes, social security, union dues, Medicare deductions, etc.
Limited English Proficiency (LEP)	The language currently used by respondents at home, either "English only" or a non-English language which is used in addition to English or in place of English.
Minority Populations	According to the U.S. Census Bureau, population of people who are not single-race white and not Hispanic. Populations of individuals who are members of the following population groups: American Indian or Alaskan Native; Asian or Pacific Islander; Black, not of Hispanic origin; or Hispanic.

<sup>2</sup> What are Hazardous Air Pollutants? (2022). US EPA. <https://www.epa.gov/haps/what-are-hazardous-air-pollutants>

Overburdened Communities	A minority, low-income, tribal or indigenous populations, or geographic locations in the United States that potentially experience disproportionate environmental harms and risks (US EPA). This disproportionality can be as a result of greater vulnerability to environmental hazards, lack of opportunity for public participation, or other factors. Increased vulnerability may be attributable to an accumulation of negative or lack of positive environmental, health, economic, or social conditions within these populations or places. The term describes situations where multiple factors, including both environmental and socio-economic stressors, may act cumulatively to affect health and the environment and contribute to persistent environmental health disparities.
Title VI of the Civil Rights Act of 1964	Title VI of the Civil Rights Act of 1964 and the U.S. Environmental Protection Agency (EPA) regulations prohibit discrimination on the basis of race, color, or national origin in any program or activity receiving federal financial assistance. NC DEQ is a recipient of financial assistance from the U.S. EPA and is subject to the provisions of Title VI and EPA's implementing regulations.
Race	A person's self-identification with one or more social groups. An individual can report [to the US Census] as White, Black or African American, Asian, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, or some other race.
Sensitive Receptors	Areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, elderly housing and convalescent facilities.
Sex	A person's biological sex.
Steady State Live Weight (SSLW)	The number of animal feeding operations covered by a state swine certificate of coverage.
Swine AFO	Animal feeding operation involving 250 or more confined swine (hogs/pigs).
Wet Poultry AFOs	Otherwise known as facilities with poultry and a liquid waste management system. Animal feeding operation with a liquid waste management system involving 30,000 or more confined poultry (chickens, turkeys, ducks, and others). Poultry facilities with a dry litter waste management system are not regulated by the Department of Environmental Quality.

# Executive Summary

## Objective

The North Carolina Department of Environmental Quality (NC DEQ) is required to finalize the renewal of six state general permits for Animal Feeding Operations effective on October 1, 2024, as part of its five-year review and revision cycle. For 2024, NC DEQ will update the 2019 State General Animal Waste Management Permits and 2022 Digester System General Permits for three types of operations: swine, cattle, and poultry with a liquid waste management system (i.e., wet poultry).

The primary goal of this Environmental Justice Report is to encourage comments and suggestions from the surrounding community, industry, and environmental groups throughout the comment period for the 2024 Animal Feeding Operations General Permits. Using available 2020 American Community Survey 5-year estimates, the report provides recommendations for appropriate enhanced public outreach and engagement to facilitate public input. Specifically, this report highlights census tracts where density of existing permitted animal feeding operations may indicate the potential for environmental justice concerns.

## Key Findings

Based on this report's analysis and using NC DEQ's definition for Potentially Underserved Block Groups (on the basis of Race/Ethnicity and Poverty) and standard EJ guidelines established by the U.S. EPA and in the National Environmental Policy Act (NEPA) documentation, the key findings are as follows:

- **Census tracts with swine animal feeding operations, and census tracts within or above the 80<sup>th</sup> percentile for swine SSLW/mile<sup>2</sup>, have ≥5% higher or ≥10% higher differences when compared to the state for the following: households which speak Spanish with limited English proficiency (≥5%), minority race & ethnic populations (≥10%), and populations below the poverty level (≥10%).**
- **Census tracts with swine and wet poultry animal feeding operations have a ≥10% higher difference for population of individuals living below 200% of the poverty level when compared to the state.**
- **Census tracts with cattle, swine, and wet poultry animal feeding operations have a ≥10% higher difference in the population of those who live with a disability and who have lower educational attainment when compared to the state. These census tracts also have a ≥10% higher difference in the population whose highest level of education is a high school degree when compared to the state.**
- **Census tracts with wet poultry animal feeding operations have a ≥10% higher difference in populations ≥65 years of age when compared to the state.**

The following potential EJ concerns have been identified:

- **Race and Ethnicity:**
  - Total minority populations – census tracts with swine AFOs have a ≥10% higher difference in total minority populations when compared to the state.

- Specific minority populations – Black or African American, Hispanic or Latino, American Indian or Alaskan Native, Native Hawaiian or Pacific Islander, and those who are two or more races.
- **Tribal Communities:**
  - Up to five state or federally recognized tribes or urban Indian organizations residing within counties with census tracts within or above the 80<sup>th</sup> percentile for swine steady-state live weight per square mile, census tracts within or above the 80<sup>th</sup> percentile for cattle steady-state live weight per square mile, or with wet poultry facilities.
- **Age and Sex:** Populations of age 65 and older.
- **Limited English Proficiency:** Spanish-speaking populations.
- **Disability:** Populations with hearing, vision, cognitive, ambulatory, self-care, and independent living difficulties.
- **Education:** Populations whose highest level of educational attainment is less than a bachelor's degree.
- **Poverty:** Populations experiencing poverty below the poverty level and 200% below the poverty level.

## Recommendations

DEQ has committed to a full public engagement process for the general permits, including four public hearings (one virtual) with 60-days of notice, a 90-day comment period, translation and interpretation services for Spanish-speaking residents and enhanced outreach as outlined in the DEQ Public Participation Plan.

In addition, the Environmental Justice Program recommends the following outreach for the Animal Feeding Operations General Permits public hearings:

- Generate a one-page flyer in Spanish and English.
- Conduct outreach and media releases through Spanish radio and news outlets as well as non-profits leaders and community leaders with connections to the Spanish-speaking community.
- Arrange an English and Spanish voicemail line to receive public comments by phone.
- Engagement with the following state or federally recognized tribes:
  - Coharie
  - Haliwa Saponi
  - Metrolina Native American Association
  - Lumbee
  - Waccamaw Siouan
- Prioritize outreach to identified sensitive receptors by email.
- Ensure the selected site for public hearing(s) has wheelchair accessibility.
- Ensure the selected site for public hearing(s) has enough space for public commenters.
- Consult known community leaders for additional outreach options.

## 1. Introduction

The North Carolina Department of Environmental Quality (NC DEQ) is required to finalize the renewal of six state general permits for Animal Feeding Operations effective on October 1, 2024, as part of its five-year review and revision cycle. For 2024, NC DEQ will update the 2019 State General Animal Waste Management Permits and 2022 Digester System General Permits for three types of operations: swine, cattle, and poultry with a liquid waste management system (i.e., wet poultry).

Animal operations are defined by General Statute 143-215.10B as feedlots involving more than 250 swine, 100 confined cattle, 75 horses, 1,000 sheep, or 30,000 poultry with a liquid waste management system. The general permits contain the required performance standards, operation and maintenance requirements, monitoring and reporting requirements, policy for inspections and entry to the farms, general conditions and the penalty policy. Each general permit is issued with a Certificate of Coverage that is permittee-specific and designates the permitted number and type of animals. These general permits are non-discharge permits, meaning they do not allow for waste to be discharged to waters of the state.

As of July 31, 2023, North Carolina has issued approximately 1,943 Certificates of Coverage for swine facilities under the 2019 General Permit. Of those, 8 facilities also hold certificates of coverage under the 2022 Digester System General Permit.

There are 114 Certificates of Coverage for cattle facilities and 7 Certificates of Coverage for wet poultry facilities.

The 2020 census data and corresponding sociodemographic analysis in this EJ report is informing the agency's approach to the community engagement process as the agency develops the final versions of the Swine, Cattle, and Wet Poultry General Permits.

## 2. Environmental Justice Evaluation

NC DEQ and its Environmental Justice (EJ) Program maintains an ongoing interest in integrating better protections for human health, vulnerable communities, the environment, and civil rights into its programs.

The Environmental Justice Program at NC DEQ works to ensure the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

The primary goal of this Environmental Justice Report is to encourage comments and suggestions from the surrounding community, industry, and environmental groups throughout the comment period for the 2024 Animal Feeding Operations General Permits. Using available 2020 American Community Survey 5-year estimates, the report provides recommendations for appropriate enhanced public outreach and engagement to facilitate public input. Specifically, this report highlights census tracts where density of existing permitted animal feeding operations may indicate the potential for environmental justice concerns.

In 2022, NC DEQ's Environmental Justice Program published the Biogas Digester General Permit Development Environmental Justice Report which analyzed swine, cattle, and wet poultry facilities covered under the 2019 general permits, their respective pounds of steady-state live weights per square mile, and three different sociodemographic indicators for select block groups, census tracts, and counties. The three sociodemographic indicators analyzed were race and ethnicity, poverty, and limited English proficiency (specifically only Spanish). The report evaluated three sociodemographic indicators for the five counties with the highest values of SSLW per square mile for each type of animal.

For this environmental justice report, NC DEQ's Environmental Justice Program expands its analysis by:

- Evaluating additional sociodemographic indicators including the aforementioned sociodemographic indicators (race and ethnicity, poverty, and limited English proficiency), four additional indicators (Age, sex, disability, and educational attainment), and five additional language categories under the limited English proficiency dataset (French, German, Chinese [includes Mandarin and Cantonese], Vietnamese, and Arabic) on a census tract and county level.
- Comparing sociodemographic indicators among all North Carolina census tracts among all counties with swine, cattle, or wet poultry compared to the rest of the state.
- Using updated 2020 five-year estimates from the U.S. Census as opposed to 2020 ten-year estimates or 2019 five-year estimates.
- Further comparing sociodemographic indicators among census tracts with higher-than-average swine or cattle steady state live weight per miles<sup>2</sup> compared to the rest of the state.
- Providing an overview of potential cumulative impacts using the CDC Environmental Justice Index.<sup>3</sup>
- Identifying sensitive receptors found within 5,000 ft. of swine AFOs which may be exposed to facility odors.

---

<sup>3</sup> 2022 Environmental Justice Index. Centers for Disease Control and Prevention (CDC) and Agency for Toxic Substances Disease Registry (ATSDR). Accessed July 12, 2023. <https://www.atsdr.cdc.gov/placeandhealth/eji/index.html>.

See section 2.3 for more information on the chosen sociodemographic indicators and Appendix A for details on U.S. census data tables used for this report compared to the 2022 Biogas report.

## 2.1 Methods

### *Methodology of Spatial AFO Analysis*

The Environmental Justice Program used GIS tools to identify AFO facilities in their census tract locations and summed the total SSLW for AFOs within that census tract. The weight per square mile of the SSLW within that census tract was then determined for each census tract containing an AFO with a non-zero SSLW using the following equation:

$$\text{SSLW per mile}^2 = ([\text{Allowable count of animal types for a facility}] * [\text{Average SSLW for that animal type}]) / [\text{census tract area}]$$

The SSLW per square mile was measured in pounds (lbs) per square mile ( $\text{mi}^2$ ).

To analyze the upper threshold of SSLW per square mile within a census tract, the 80<sup>th</sup> percentile and above of SSLW per square mile per census tract area was selected by AFO permit type. This created the following census tract classifications to be analyzed as sociodemographic subsets:

- Tracts with swine AFOs
- 80<sup>th</sup> percentile of swine census tracts by SSLW per square mile
- Tracts with cattle AFOs
- 80<sup>th</sup> percentile cattle census tracts by SSLW per square mile
- Tracts with wet poultry AFOs.

Facilities with more than one animal type used the sum of the total combined SSLW for each type of animal to determine the AFO per square mile. Because of the low quantity of permitted wet poultry AFOs (n=8), there was not an 80<sup>th</sup> percentile calculation of the census tracts with wet poultry AFOS.

### *Methodology of Sociodemographic Analysis*

Sociodemographic analysis was informed by NC DEQ's Potentially Underserved Block Groups. NC DEQ defines potentially Underserved Communities by examining the Race/Ethnicity and Poverty criteria of each block group. The block group is then compared to both the County and the State and selected as a Potentially Underserved Block Group if it meets the following criteria for Race/Ethnicity and Poverty:

- Race/Ethnicity: Share of nonwhites and Hispanic or Latino (of any race) is over fifty percent OR Share of nonwhites and Hispanic or Latino (of any race) is at least ten percent higher than County or State share. AND
- Poverty: Share of population experiencing poverty is over twenty percent AND Share of households in poverty is at least five percent higher than the County or State share.

These selections occur on a block group level,<sup>4</sup> this dataset is a selection of the 2019 ACS data from the data tables B03002—Hispanic or Latino Origin by Race—and S1701—Poverty Status in the Past 12

---

<sup>4</sup> Block groups are statistical divisions of census tracts, are generally defined to contain between 600 and 3,000 people and are used to present data and control block numbering. A block group consists of clusters of blocks within the same census tract that have the same first digit of their four-digit census block number.

Months. Learn more about NC DEQ's Potentially Underserved Block Groups 2019 - Overview ([arcgis.com](http://arcgis.com))

## 2.2 Animal Feeding Operation Geographic Distribution

### *Swine Animal Feeding Operations*

In North Carolina, 1916 locations have at least one type<sup>5</sup> of regulated swine operation. The swine AFOs are located in 275 census tracts in 60 counties (Figure 2).

The 80<sup>th</sup> percentile swine census tracts were found to have a SSLW per square mile of  $\geq 158,544 \text{ lbs/mi}^2$ . There are 55 census tracts in 14 counties which are at or above the 80<sup>th</sup> percentile for swine SSLW per square mile. Figure 2 (top) displays swine SSLW per square mile in North Carolina by census tract with the darkest green corresponding to 80<sup>th</sup> percentile swine census tracts.

There were 198 Potentially Underserved Block groups found within census tracts that contained swine AFOs. A total of 135 census tracts were identified with swine AFOs and Potentially Underserved Block Groups present, which is 49.1% of all census tracts with swine AFOs (Figure 3).

There were 51 Potentially Underserved Block groups identified within census tracts above the 80<sup>th</sup> percentile of total swine SSLW per square mile. A total of 35 census tracts were identified with total swine SSLW above the 80<sup>th</sup> percentile and Potentially Underserved Block Groups, which is 63.6% of census tracts above the 80<sup>th</sup> percentile of swine SSLW (Figure 3).

Appendix D identifies census tracts, counties, and SSLW per square mile for all census tracts containing any swine AFO and 80<sup>th</sup> percentile swine census tracts.

### *Cattle Animal Feeding Operations*

In North Carolina, 114 locations have at least one type of regulated cattle operation. The cattle AFOs are located in 81 census tracts in 32 counties.

The 80<sup>th</sup> percentile of cattle SSLW per square mile census tracts was found as  $\geq 97,254 \text{ lbs/mi}^2$ . There are 17 census tracts in 6 counties at or above the 80<sup>th</sup> percentile for cattle SSLW per square mile. Figure 2 (middle) displays cattle SSLW per square mile for North Carolina census tracts with the darkest blue corresponding to the 80<sup>th</sup> percentile of cattle SSLW per square mile census tracts.

There were 20 Potentially Underserved Block groups found within census tracts that contained cattle AFOs. A total of 13 census tracts were identified with cattle AFOs and Potentially Underserved Block Groups present, which is 16.0% of all census tracts with cattle AFOs (Figure 3).

There were 6 Potentially Underserved Block groups identified within census tracts above the 80<sup>th</sup> percentile of total cattle SSLW per square mile. A total of 5 census tracts were identified with total cattle SSLW above the 80<sup>th</sup> percentile and Potentially Underserved Block Groups, which is 17.6% of census tracts above the 80<sup>th</sup> percentile of cattle SSLW (Figure 3).

---

<sup>5</sup> One animal feeding operation location may have multiple permits for the same type of animal. Each unique location was counted only once for the analysis. One location may also have multiple permits for different types of animals (e.g., swine, cattle, poultry). This location was counted once for each respective type of animal covered in this report's analysis.

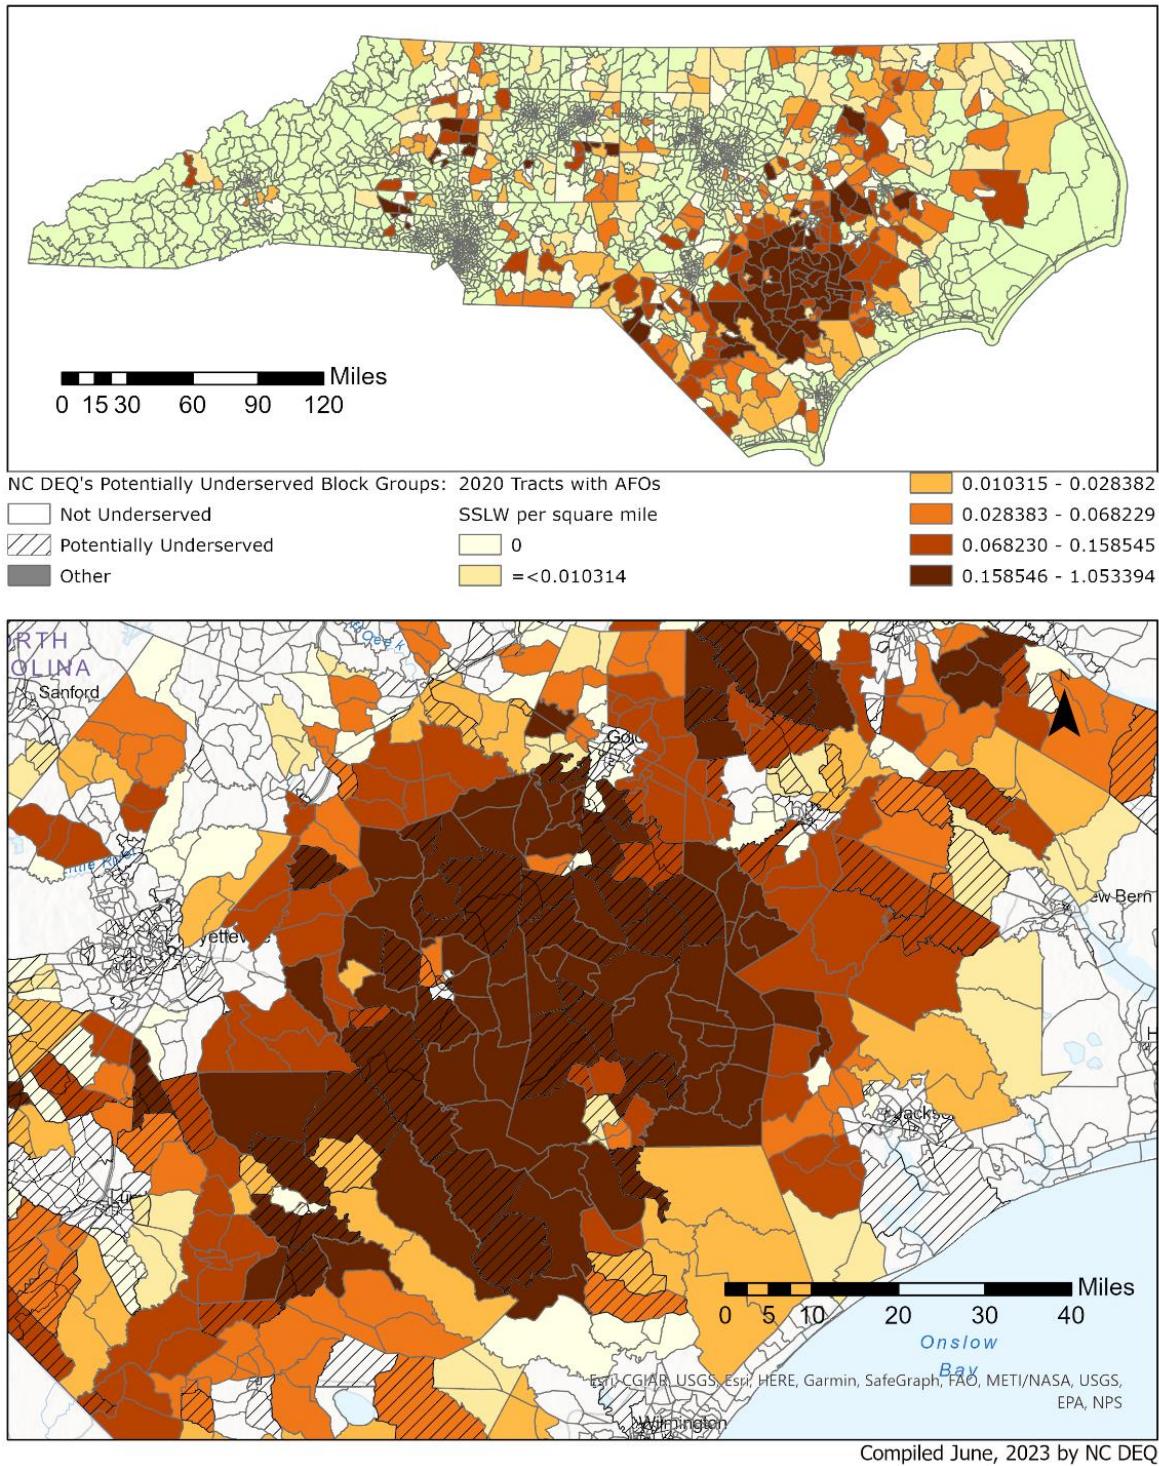

Appendix D identifies census tracts, counties, and SSLW per square mile for all census tracts containing cattle AFOs and the 80<sup>th</sup> percentile of cattle SSLW per mile census tracts.

*Wet Poultry Animal Feeding Operations*

In North Carolina, 8 locations have at least one type of regulated wet poultry operation. The wet poultry AFOs are located in 6 census tracts in 5 counties. Figure 1 (bottom) displays wet poultry SSLW per square mile in NC.

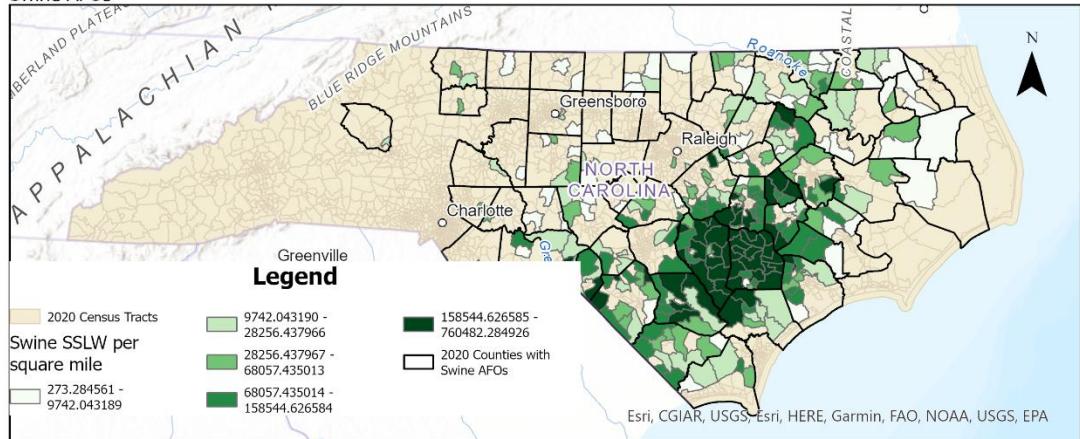

There were 5 Potentially Underserved Block groups found within census tracts that contained wet poultry AFOs. A total of 4 census tracts were identified with wet poultry AFOs and Potentially Underserved Block Groups present, which is 66.7% of all census tracts with wet poultry AFOs (Figure 3).

Appendix D identifies census tracts, counties, and SSLW per square mile for all census tracts containing any wet poultry AFO.

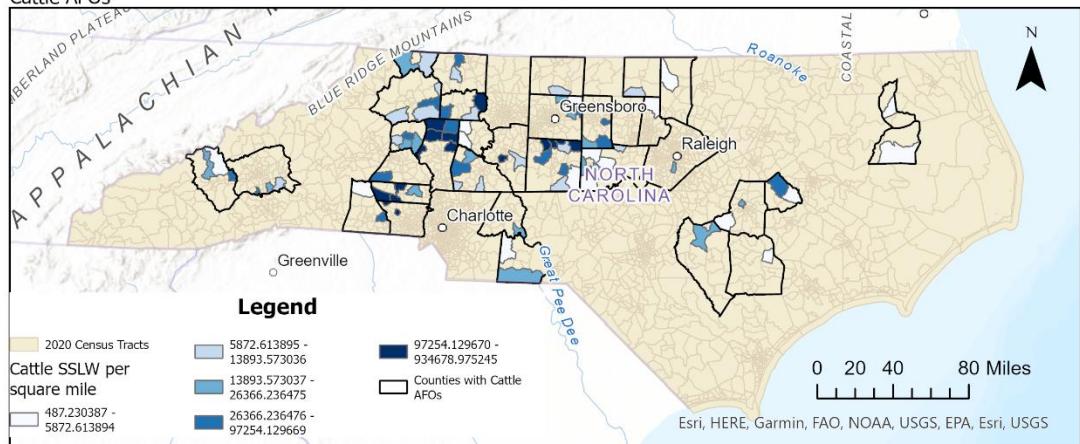

**Figure 1.** Steady State Live Weight per Square Mile for all AFO types by census tract

**Figure 3.** NC Census Tracts containing Animal Feeding Operations and NCDEQ's Potentially Underserved Block Groups (PUBG) by animal type. The darkest shade of green for swine and blue for cattle indicates census tracts in the 80<sup>th</sup> percentile of SSLW

## 2.3 Sociodemographic Indicators

The Environmental Justice Program examined the following sociodemographic indicators:

- Race & Ethnicity
- Age & Sex
- Disability
- Limited English Proficiency (LEP)
- Educational Attainment
- Poverty

Sociodemographic data are available through the U.S. Census Bureau. See Appendix A for descriptions of all U.S. Census source data used in this report.

### Race & Ethnicity

To analyze potential EJ concerns based on race, color, national origin, and ethnicity, the Environmental Justice Program examined populations in the following U.S. Census-defined race and ethnicity categories:

- White (Not Hispanic)
- Black or African American
- Hispanic or Latino
- American Indian or Alaska Native
- Asian
- Native Hawaiian and Other Pacific Islander
- Some Other Race
- Two or More Races

### Age & Sex

To analyze potential EJ concerns based on age and sex, the Environmental Justice Program examined populations of two different age categories for both males and females. The populations of  $\leq 5$  years old and  $\geq 65$  years old were examined because the Centers for Disease Control and Prevention (CDC) considers these age ranges as vulnerable.<sup>6</sup>

### Disability

To analyze any potential EJ concerns based on disability status, the total population with a disability was examined.

To analyze any potential EJ concerns regarding accessibility to public information and public hearings concerning public health or environmental impacts of programs, policies, and activities the types of difficulties experienced by the total population with a disability was also examined.

### Limited English Proficiency

---

<sup>6</sup> *Sensitive Populations and Chemical Exposure*. Centers for Disease Control and Prevention (CDC) and Agency for Toxic Substances Disease Registry (ATSDR).

<https://www.atsdr.cdc.gov/emes/public/docs/Sensitive%20Populations%20FS.pdf>

Spanish-, French-, German-, Chinese-, Vietnamese-, and Arabic-speaking populations are the top 6 non-English languages spoken in North Carolina.<sup>7</sup> In North Carolina, the largest limited English proficiency (LEP) population is Spanish-speaking, making up approximately 3.5% of the state population and approximately 75% of the entire LEP population in North Carolina (American Community Survey 2011-2015). The next largest language groups are Chinese-speaking (approximately 3.5% of the LEP population), Vietnamese-speaking (approximately 3.3% of the LEP population), and other Asian Language-speaking (approximately 2% of the LEP population).

To analyze any potential EJ concerns regarding accessibility to public information concerning public health or environmental impacts of programs, policies, and activities, these six identified populations with LEP were examined.

For this EJ report, populations that speak English “Less than very well,” as categorized in the U.S. Census Bureau, are considered populations with LEP.

#### Educational Attainment

To analyze any potential EJ concerns based on socioeconomic status, populations with varying levels of educational attainment (bachelor’s degree and higher and high school degree and lower) for adults of 25 years or older were examined.

#### Poverty & Low-Income

To analyze any potential EJ concerns based on income levels, populations below the poverty level and the ratio of people 200% below the poverty level were examined. The poverty level for 2019 was defined as having a household income less than \$12,490 for a household with one individual, with an additional \$4,420 per individual added to a household. The US Census Bureau considers a household to be all individuals that occupy a housing unit as their usual place of residence.<sup>8</sup> Analyzed poverty data from the US Census Bureau considered total populations in poverty as a count of individuals, which had already been determined on a household level according to these guidelines.

<sup>7</sup> Tippett, R. (2016, April 21). Hola, xin chào, bonjour: Many languages heard in NC homes. *UNC Chapel Hill Carolina Population Center*. <https://carolinademography.cpc.unc.edu/2016/04/21/hola-xin-chao-bonjour-many-languages-heard-in-nc-homes/>

<sup>8</sup> Household Definition. (n.d.). In *US Census Bureau Glossary*. <https://www.census.gov/glossary/?term=Household>

### 3. Sociodemographic Analysis

Using NC DEQ criteria for Potentially Underserved Block Groups (on the basis of Race/Ethnicity and Poverty on a block group level) and standard EJ guidelines established by the U.S. EPA and NEPA documentation, the following conditions are highlighted as communities with the potential for environmental justice concerns:

1. A 10% or more difference when compared to the state for race and ethnicity, age and sex, disability, and educational attainment (up to high school or equivalent level);
2. A 50% or more minority (non-White) population or a minority population percentage of the affected area that is meaningfully greater than the minority population percentage in the overall state of North Carolina<sup>9</sup>;
3. Share of population experiencing poverty is 20% or more;
4. Percentage increase of 5% or more compared to the state for poverty;
5. At least 5% of the population or 1,000 people (whichever is smaller) speaks English less than very well.

Average values for sociodemographic indicators among all census tracts in the state of North Carolina are compared average values among a subset of census tracts which contain a type of AFO. Any populations that meet the criteria for being a potential EJ concern is noted with a \* in figures and in **\*bold** in tables.

#### 3.1 Race & Ethnicity

##### Potential for EJ Concerns

- **The total minority population is 49.48%** for 80<sup>th</sup> percentile swine census tracts (Figure 6; Table 5) and is **≥10% higher** compared to the state minority population.
- The following minority **races or ethnicities** in both types of swine census tracts (80<sup>th</sup> percentile swine or all swine) or census tracts with wet poultry facilities AFOs were **≥10% higher** compared to the state (Figures 4, 5; Table 4):
  - Black or African American (80<sup>th</sup> percentile swine census tracts, all swine, all wet poultry)
  - Hispanic or Latino (80<sup>th</sup> percentile swine census tracts, all swine)
  - American Indian or Alaskan Native (80<sup>th</sup> percentile swine census tracts, all swine)
  - Native Hawaiian or Pacific Islander (all wet poultry)
  - Two or more races (all wet poultry)
- Some census tracts with 80<sup>th</sup> percentile swine census tracts, 80<sup>th</sup> percentile cattle census tracts, and with wet poultry AFOs, are in counties with state-recognized Tribes or Urban Indian Organizations (Tables 1, 2, 3).

##### Results

###### *Swine*

Census tracts within or above the 80<sup>th</sup> percentile for swine SSLW/mile<sup>2</sup> had populations **≥10% higher** than the state for three minority race/ethnicity population categories (Figure 5; Table 4):

---

<sup>9</sup> Council on Environmental Quality (CEQ). (1997). *Environmental Justice Guidance Under the National Environmental Policy Act [Guidance]*. US EPA. [https://www.epa.gov/sites/default/files/2015-02/documents/ej\\_guidance\\_nepa\\_ceq1297.pdf](https://www.epa.gov/sites/default/files/2015-02/documents/ej_guidance_nepa_ceq1297.pdf)

- Black or African American
- Hispanic or Latino
- American Indian or Alaskan Native

Census tracts with any swine AFO also had populations  $\geq 10\%$  higher than the state for Black or African American and American Indian or Alaska Native populations.

The total non-White population (minority population) among 80<sup>th</sup> percentile swine census tracts is 49.48% (Figure 7; Table 5). NEPA guidelines identify Minority populations where either: (a) the minority population of the affected area exceeds 50 percent or (b) the minority population percentage of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis.<sup>10</sup> The minority percentage for the 80<sup>th</sup> percentile swine census tracts (49.07%)  $\geq 10\%$  higher is greater than the state minority percentage (37.39%) warranting it to be identified as potential EJ concern. Census tracts with any swine AFO have a total non-White population of 41.62% which is  $\geq 10\%$  higher than the state average (37.39%).

Of the 14 counties with 80<sup>th</sup> percentile swine census tracts, there are 4 counties within which a state or federally recognized tribe resides (Table 1).

**Table 1.** 80<sup>th</sup> Percentile Swine Census Tracts in Counties with Tribes or Urban Indian Organizations

#### *Cattle*

Census tracts within or above the 80<sup>th</sup> percentile for cattle SSLW density had no populations  $\geq 10\%$  higher than the state for one minority race/ethnicity population category (Figure 5, Table 4).

Of the 6 counties with 80<sup>th</sup> percentile cattle census tracts, there are 3 counties within which an Urban Indian Organization resides (Table 2).

#### *Wet Poultry*

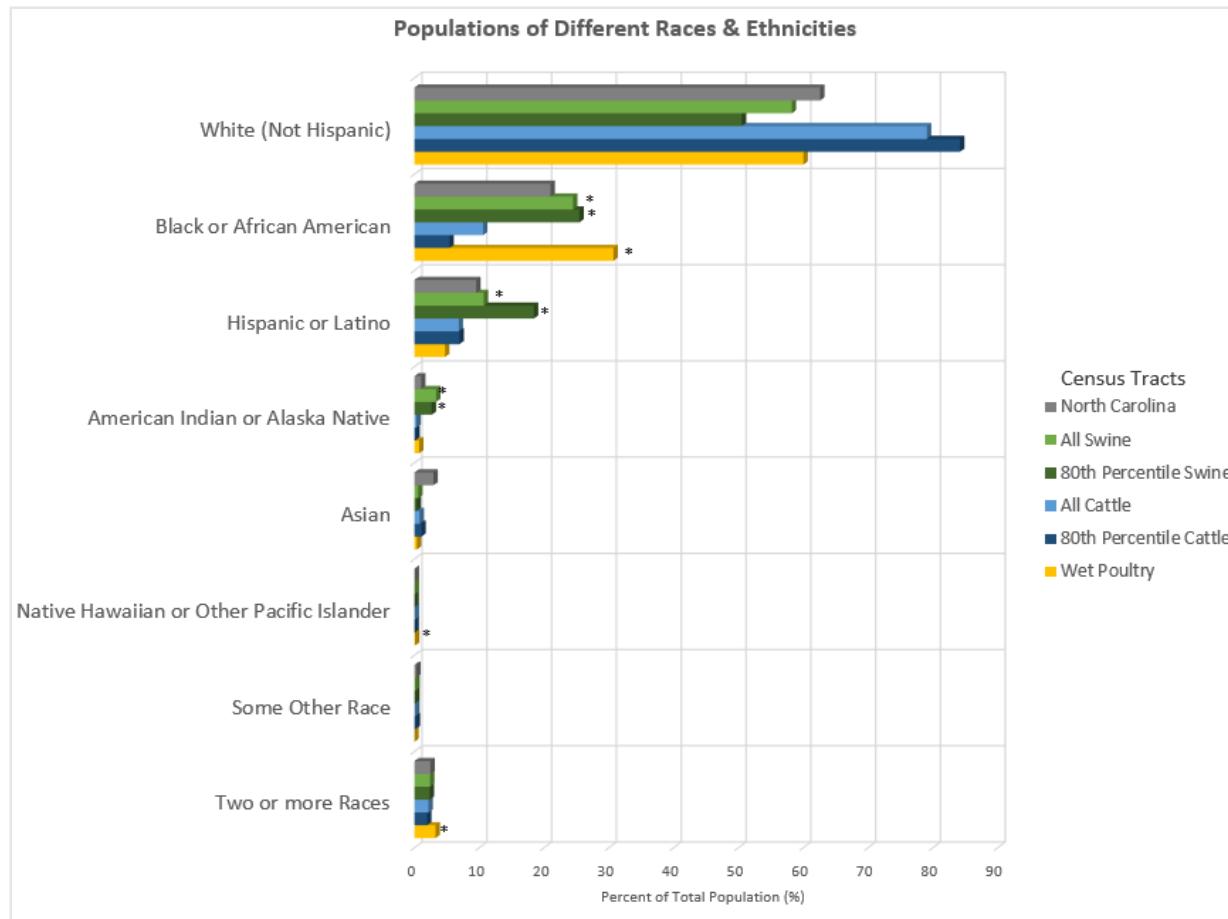

Census tracts with wet poultry facilities had populations ≥10% higher than the state for the three race/ethnicity categories (Figure 5; Table 4):

- Black or African American
- Native Hawaiian or Pacific Islander
- Two or more races

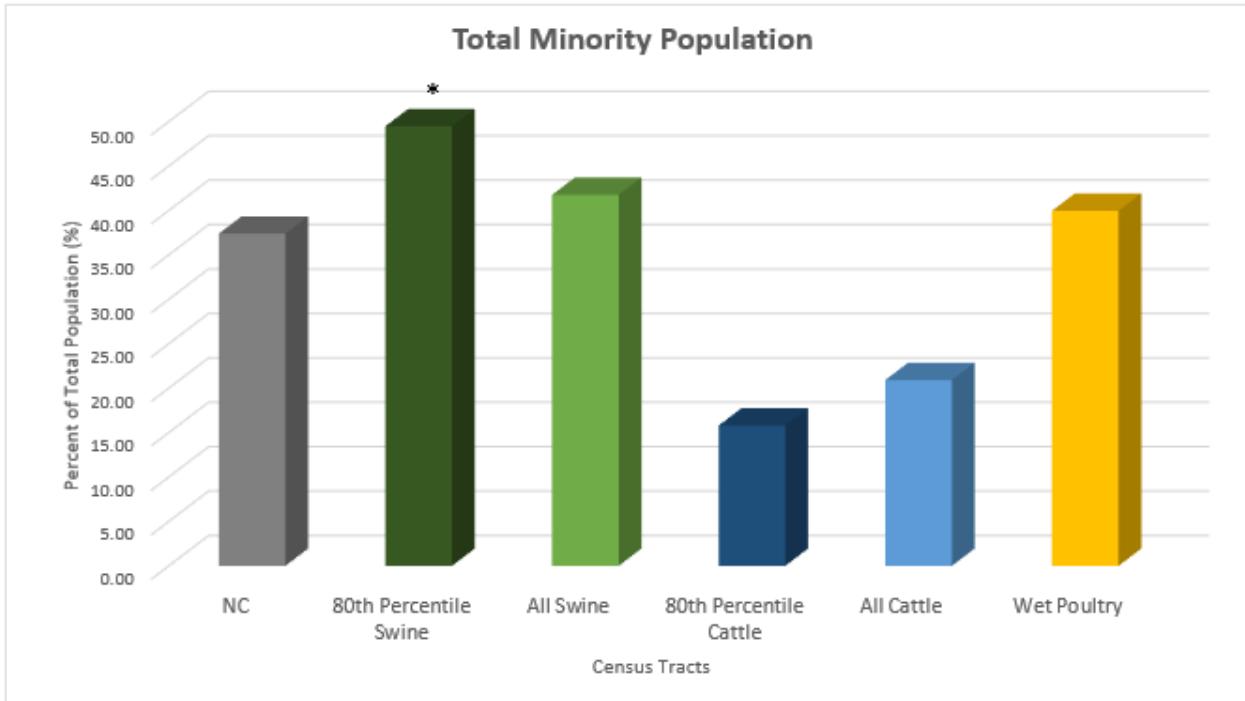

Of the 5 counties with wet poultry facilities, there are 2 counties within which a state or federally recognized tribe resides (Table 3).

### 3.2 Age & Sex

#### Potential for EJ Concerns

- The population of those who are **age 65 or older** was **≥10% higher** for all cattle census tracts and for wet poultry census tracts when compared to the state (Table 7).

#### *Swine*

In census tracts within or above the 80<sup>th</sup> percentile for swine SSLW per square mile or with any swine AFO, no notable differences were observed in the population of those who are age 5 or younger, nor in the population of those age 65 or older (Table 7).

No notable differences between the male and female populations were observed (Table 6).

#### *Cattle*

In census tracts within or above the 80<sup>th</sup> percentile for cattle per square mile or with any cattle AFO, the population of those who are age 65 and older was **≥10% higher** when compared to the state (Appendix C). No notable differences in the population of those who are age 5 or younger were observed.

---

<sup>11</sup> Includes all other responses not included in the White (Not Hispanic), Black or African American, Hispanic or Latino, American Indian or Alaska Native, Asian, and Native Hawaiian and Other Pacific Islander U.S. census categories.

### *Wet Poultry*

In census tracts with wet poultry facilities, the population of those who are age 65 and older was  $\geq 10\%$  higher when compared to the state (Table 7). No notable differences in the population of those who are age 5 or younger were observed.

No notable differences between the male and female populations were observed (Table 6).

<b>Above 65 Years Old</b>	16.26	16.80	16.90	<b>19.74*</b>

**Source:** US Census Bureau, 2020 American Community Survey (ACS) 5-year estimate  
All **bolded\*** cells indicate a percentage increase of **10% or more** in the group of census tracts compared to the State.

### 3.3 Disability

#### Potential for EJ Concerns

- The **total population with a disability** in 80<sup>th</sup> percentile swine census tracts, 80<sup>th</sup> percentile cattle census tracts, and with wet poultry facilities were  $\geq 10\%$  higher when compared to the state (Table 8).
- All six U.S. Census-identified **types of difficulties** were  $\geq 10\%$  higher in 80<sup>th</sup> percentile swine census tracts and 80<sup>th</sup> percentile cattle census tracts when compared to the state (Table 8):
  - Hearing

- Vision
- Cognitive
- Ambulatory
- Self-care
- Independent Living

## Results

### *Swine*

In census tracts within or above the 80<sup>th</sup> percentile for swine SSLW density, the total population with a disability was ≥10% higher when compared to the state (Table 8).

All six types of difficulties included in this analysis (hearing, vision, cognitive, ambulatory, self-care, and independent living) were also ≥10% higher when compared to the state for 80<sup>th</sup> percentile swine census tracts (Table 8).

### *Cattle*

In census tracts within or above the 80<sup>th</sup> percentile for cattle SSLW density, the total population with a disability was ≥10% higher when compared to the state (Table 8).

All six types of difficulties included in this analysis (hearing, vision, cognitive, ambulatory, self-care, and independent living) were also ≥10% higher when compared to the state for 80<sup>th</sup> percentile cattle census tracts (Table 8).

### *Wet Poultry*

In census tracts with wet poultry facilities, the total population with a disability was ≥10% higher when compared to the state (Table 8).

Five of six types of difficulties were also ≥10% higher when compared to the state (Table 8):

- Hearing
- Cognitive
- Ambulatory
- Self-care
- Independent living

### 3.4 Limited English Proficiency

#### Potential for EJ Concerns

- Populations that speak Spanish with **Limited English Proficiency** were **≥5% higher** in 80<sup>th</sup> percentile swine census tracts and with any swine AFO when compared to the state (Figure 5; Table 9). 80<sup>th</sup> percentile swine census tracts have populations that speak Spanish with Limited English Proficiency **≥5%** higher compared to all census tracts with swine AFOs.
- Populations that speak French with **Limited English Proficiency** were **≥5% higher** in census tracts with 80<sup>th</sup> percentile swine census tracts when compared to the state (Table 9).
- Populations that speak Arabic with **Limited English Proficiency** were **≥5% higher** in census tracts with wet poultry facilities when compared to the state (Table 9).

#### Results

##### *Swine*

In census tracts within or above the 80<sup>th</sup> percentile for swine SSLW density, the population that speaks Spanish with Limited English Proficiency (LEP) was 8.14% of the population and was **≥5%** higher when compared to the state (Table 9).

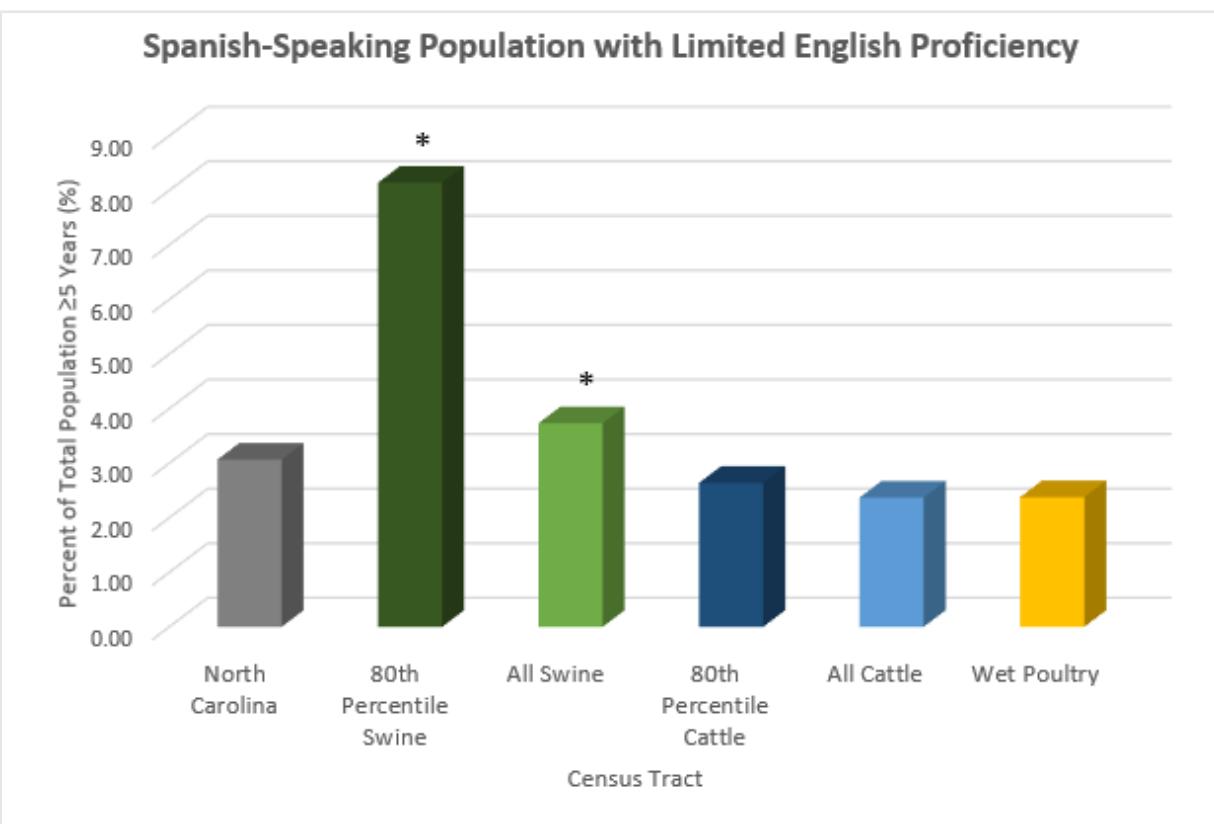

Additionally, populations that speak French with Limited English Proficiency (0.28%) were **≥5% higher** in 80<sup>th</sup> percentile swine census tracts when compared to the state (Table 9).

##### *Cattle*

No notable LEP differences nor non-English speaking populations **≥5%** were observed for census tracts within or above the 80<sup>th</sup> percentile for cattle SSLW/mile<sup>2</sup>.

##### *Wet Poultry*

In census tracts with wet poultry facilities, populations that speak Arabic with Limited English Proficiency (0.18%) were **≥5% higher** when compared to the state (Table 9).

**Figure 6.** Spanish-Speaking Population Percentage with Limited English Proficiency in NC and AFO Census Tracts; \* indicates a 10% difference when compared to the State

**Source:** US Census Bureau, 2020 American Community Survey (ACS) 5-year estimate

All **bolded\*** cells indicate a percentage increase of **5% or more** in the group of census tracts compared to the State.

### 3.5 Educational Attainment

#### Potential for EJ Concerns

- The population **age 18-24** and populations **age 25 and older** that have not received a **high school graduate degree (or equivalent)** or higher are **≥10% higher** for census tracts with all AFO types analyzed: 80<sup>th</sup> percentile swine census tracts, swine AFOs, 80<sup>th</sup> percentile cattle census tracts, cattle AFOs, and wet poultry AFOs when compared to the state (Figure 7, 8; Table 10).

#### Results

##### *Swine*

In census tracts within or above the 80<sup>th</sup> percentile for swine SSLW/mile<sup>2</sup>, the population of ages 18 – 24 that did not receive a high school graduate degree (or equivalent) or higher was ≥10% higher when compared to the state (Figure 7; Table 10). Furthermore, when compared to census tracts with a swine AFO, 80<sup>th</sup> percentile swine census tracts have ≥10% higher population of ages 18-24 that did not receive a high school graduate degree.

The categories of highest level of educational attainment were ≥10% higher when compared to the state for census tracts with swine AFOs and with 80<sup>th</sup> percentile swine census tracts (Figure 8; Table 10):

- High school graduate (or equivalent)
- 9<sup>th</sup> – 12<sup>th</sup> grade (no high school diploma)
- Less than 9<sup>th</sup> grade

##### *Cattle*

In census tracts with a cattle AFO, the population of ages 18 – 24 that did not receive a high school graduate degree (or equivalent) or higher was ≥10% higher when compared to the state (Figure 7; Table 10).

The three other categories of highest level of educational attainment were ≥10% higher when compared to the state for census tracts with 80<sup>th</sup> percentile cattle census tracts and a cattle AFO (Figure 8; Table 10):

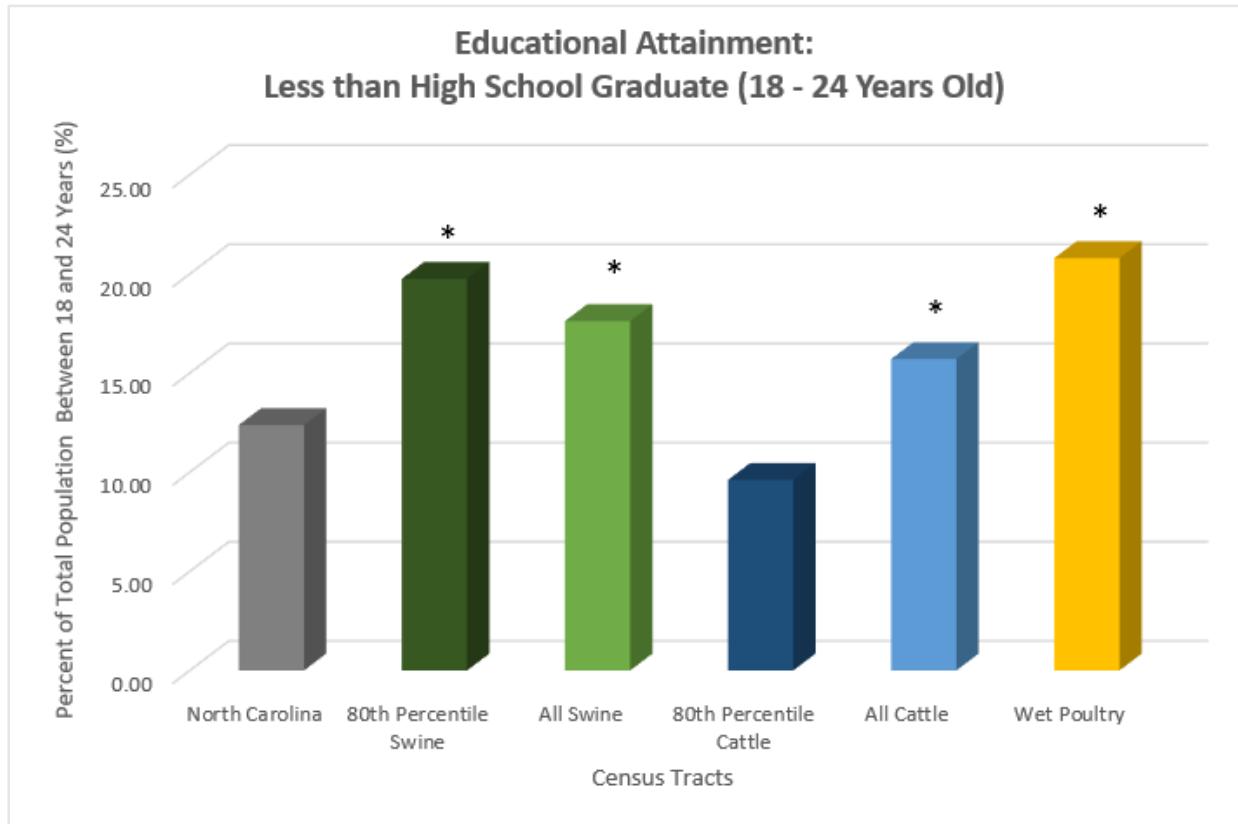

- High school graduate (or equivalent)
- 9<sup>th</sup> – 12<sup>th</sup> grade (no high school diploma)
- Less than 9<sup>th</sup> grade

##### *Wet Poultry*

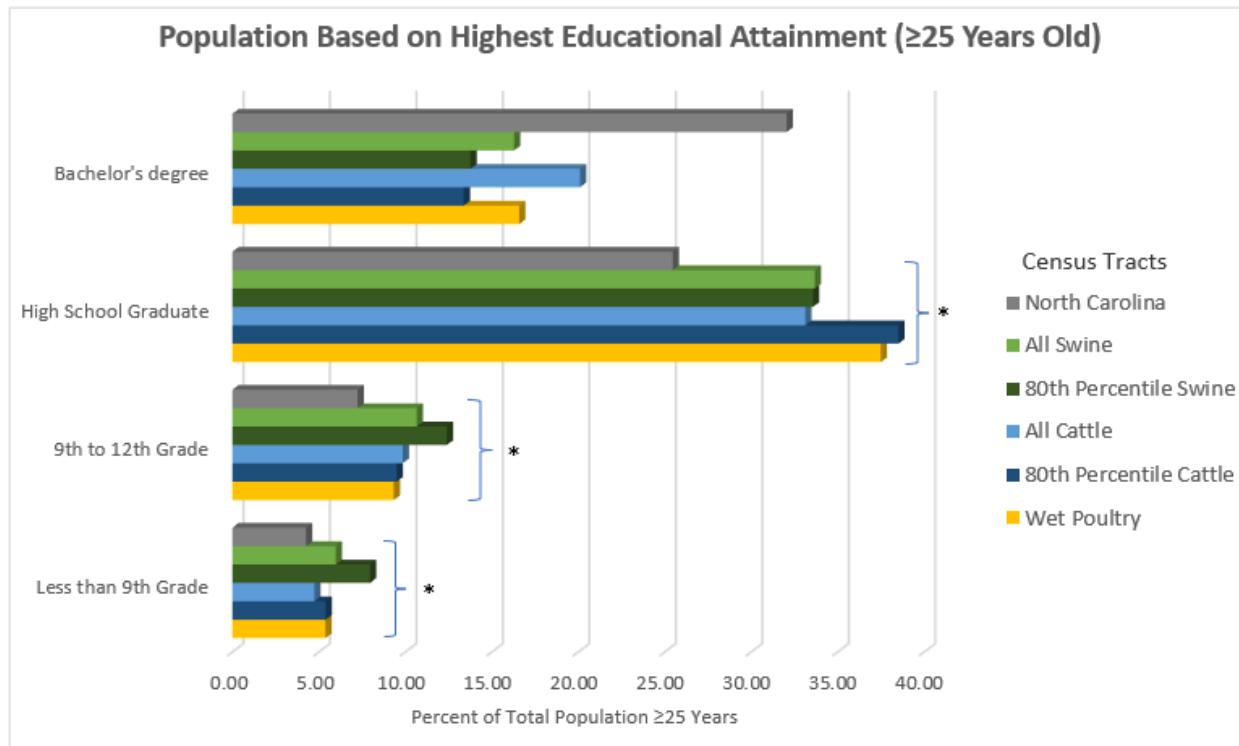

In census tracts with wet poultry facilities, the population of ages 18 – 24 that did not receive a high school graduate degree (or equivalent) or higher was ≥10% higher when compared to the state (Figure 7; Table 10).

The three other categories of highest level of educational attainment were  $\geq 10\%$  higher when compared to the state (Figure 8; Table 10):

- High school graduate (or equivalent)
- 9<sup>th</sup> – 12<sup>th</sup> grade (no high school diploma)
- Less than 9<sup>th</sup> grade

**Figure 7.** Population Percentage of those 18 - 24 Years with Less than a High School Graduate Degree in NC and AFO Census Tracts; \* indicates a 10% difference when compared to the State

**Figure 8.** Population Percentage of Ages 25 Years and Above Based on the Highest Level of Education Attained in NC and AFO Census Tracts \* indicates a 10% difference when compared to the State

**Source:** US Census Bureau, 2020 American Community Survey (ACS) 5-year estimate

All **bolded\*** cells indicate a percentage increase of **10% or more** in the group of census tracts compared to the State.

### 3.6 Poverty & Low-Income

#### Potential for EJ Concerns

- The population which is **below the poverty level** in 80<sup>th</sup> percentile swine census tracts, or with any swine AFO, is **≥10% higher** when compared to the state (Table 11).
- The population ratio of those **below 200% of the poverty level** in 80<sup>th</sup> percentile swine census tracts, with any swine AFO, or with wet poultry AFO is **≥10% higher** when compared to the state (Table 11).
- Furthermore, 80<sup>th</sup> percentile swine census tracts had a larger proportion of the population in poverty (>20%) and living below 200% of the poverty level compared to all census tracts with a swine AFO.

#### Results

##### *Swine*

In census tracts within or above the 80<sup>th</sup> percentile for swine SSLW/mile<sup>2</sup>, or with any swine AFO, the populations below the poverty level and the population of those below 200% of the poverty level were all **≥10%** higher when compared to the state (Table 11). 80<sup>th</sup> percentile swine census tracts were **≥10%** higher when compared to census tracts with any swine AFO.

Swine census tracts above the 80<sup>th</sup> percentile had >20% of the population living below the poverty level.

##### *Cattle*

In census tracts within or above the 80<sup>th</sup> percentile for cattle SSLW/mile<sup>2</sup>, there were no notable differences for those experiencing poverty when compared to the state.

##### *Wet Poultry*

In census tracts with wet poultry facilities, the population of those below 200% of the poverty level was **≥10%** higher when compared to the state (Table 11).

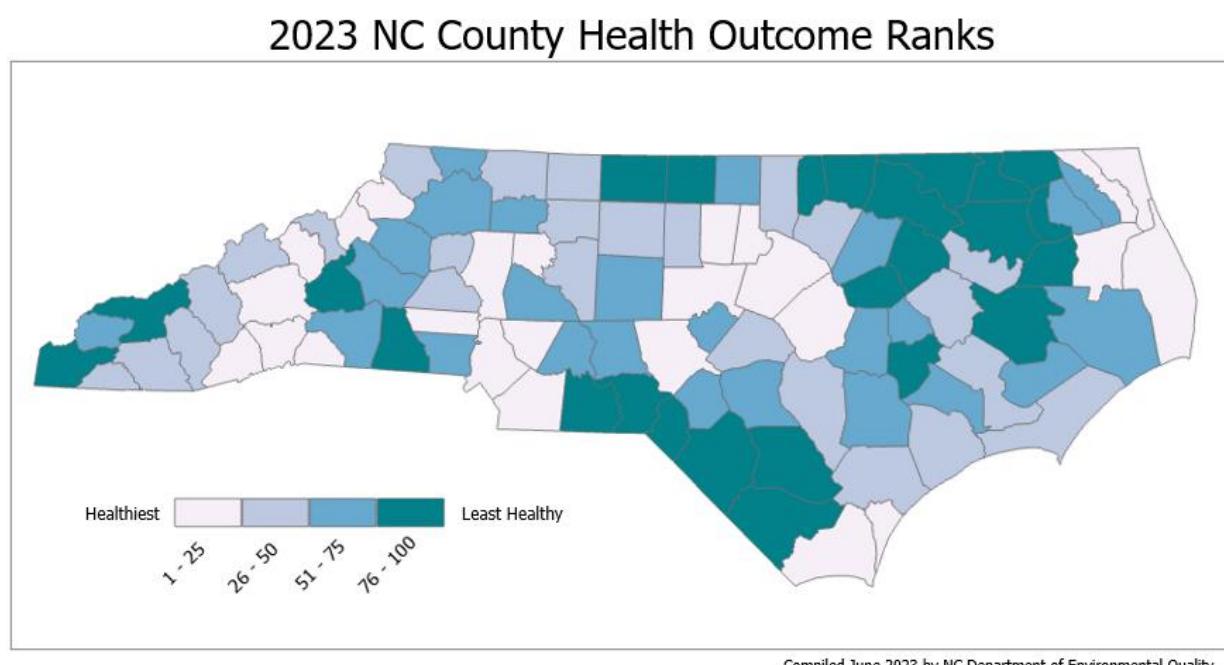

**Table 11.** Population Percentage Experiencing Poverty in NC and AFO Census Tracts

## 4. Health

### 4.1 County Health Outcome Ranks

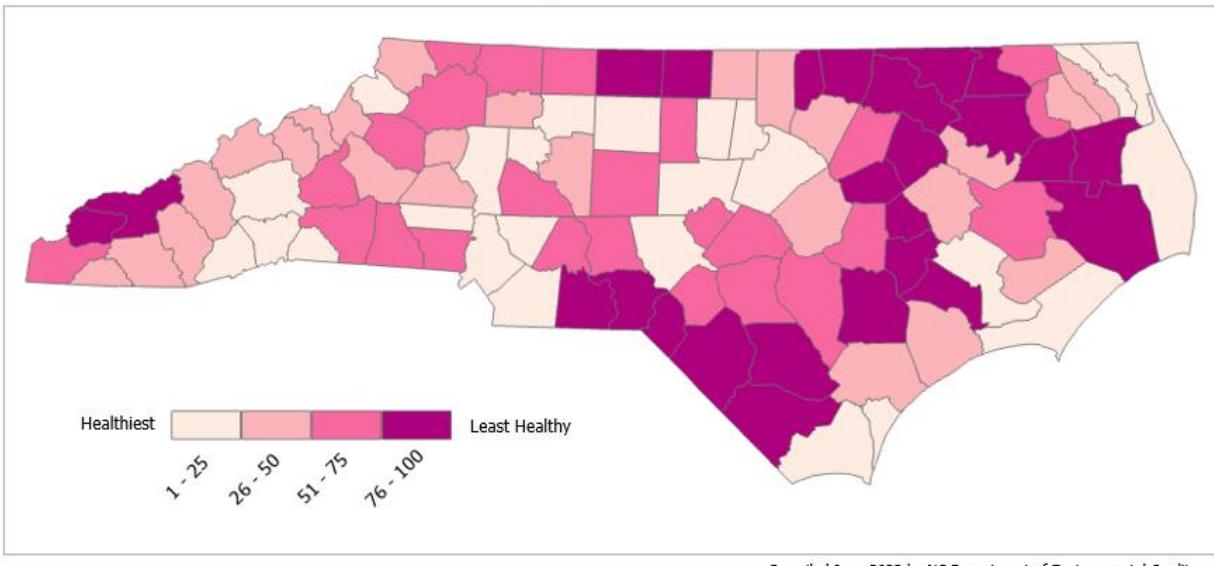

For this report, the Environmental Justice Program examined how sensitive populations (specifically the census tracts identified in Section 5 Cumulative Impacts) compared to the rest of the state's health outcomes and health factors. The University of Wisconsin Population Health Institute, in collaboration with the Robert Wood Johnson Foundation, calculated County Health Rankings for all the States in the United States ([www.countyhealthrankings.org](http://www.countyhealthrankings.org)). This 2023 County Health Rankings National Data<sup>12</sup> is based on health outcomes (such as lifespan and self-reported health status) and health factors (such as environmental, social, and economic conditions). Figures 9 and 10 display rankings for all 100 counties in North Carolina.

**Figure 9. 2023 NC County Health Outcome Ranks**

<sup>12</sup> University of Wisconsin Population Health Institute. 2022 Environmental Justice Index.  
<https://www.countyhealthrankings.org/explore-health-rankings/rankings-data-documentation>.

## 2023 NC County Health Factors Ranks

**Figure 10.** 2023 NC County Health Factors Ranks

### 4.2 Sensitive Receptors

NC DEQ identified lists of sensitive receptors (i.e., schools and childcare centers, places of worship, hospitals and healthcare facilities, parks, prisons, and public housing buildings) which were within 5,000 feet of any swine AFO. Places of worship were not included in this analysis due to unavailable GIS data.

A total of 120 sensitive receptors were found within 5,000 ft. of swine AFOs and consisted of the following categories:

- 61 daycare centers
- 11 non-public schools
- 35 public schools
- 0 hospitals
- 13 nursing homes

For a detailed list of these sensitive receptors and GIS data sources, see Appendix G.

## 5. Cumulative Impacts

Cumulative impacts are the combined, environmental burdens, pre-existing health conditions, and social factors which may harm human health.<sup>13</sup> At this time, there is no formal, standardized method to assess cumulative impacts. However, cumulative impacts that may affect public health and quality of life are a frequently raised concern among communities in North Carolina living near AFOs.

To identify communities at risk of potentially greater cumulative impacts from swine AFOs, the Environmental Justice Program analyzed 2019 census tracts with respect to two variables:

- Environmental justice index (EJI) scores
- Swine SSLW per square mile

EJI scores were sourced from the Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR).<sup>14</sup> The EJI is intended to evaluate the cumulative impacts of environmental injustice on health by ranking census tracts based on combined social, environmental burden, and health vulnerability indicators. Social vulnerability indicators include racial/ethnic minority status, socioeconomic status, household characteristics, and housing type. Environmental burden indicators include air pollution, potentially hazardous and toxic sites, built environment, transportation infrastructure, and water pollution. Health vulnerability is determined based on pre-existing chronic disease burden. The EJI delivers a single score for each census tract to identify areas most at risk for the health impacts of environmental burden (See Appendix E for more information on the CDC's EJI Model). More information on the indicators can be found in the CDC's EJI Technical Documentation.<sup>15</sup>

For EJI scores in this analysis, the Environmental Justice Program used the variable representing the sum score of the health variables model, environmental burden index, and social vulnerabilities model (SPL\_EJI in the CDC's EJI Technical Documentation).

Only swine SSLW per square mile was evaluated with EJI scores because swine census tracts had a greater number of sociodemographic indicators with potential EJ concerns compared to cattle and wet poultry AFOs.

Overall, among all census tracts with a swine AFO, 42 census tracts had both high EJI scores and a total swine SSLW per square mile  $\geq 92,675.28$ , which is the upper threshold value based on terciles for this analysis (See dark purple census tracts in Figure 11; see Appendix F for a comprehensive list of census tract and counties marked dark purple). These census tracts reside within 16 different counties. The upper threshold value for swine SSLW per square mile does not correspond to the 80<sup>th</sup> percentile value

identified for use in Section 3 of this report since this data is based on 2019 census tracts to match the EJI's 2019 dataset.

Among the 16 counties with high EJI scores that were also above the 80<sup>th</sup> percentile for total swine SSLW per square mile  $\geq 92,675.28$ , Duplin County had the largest total swine SSLW per square mile (See Appendix F for all selected tracts and counties' total swine SSLW per square mile). Duplin County also contained the census tract (Census Tract 908.01) with the largest swine SSLW per square mile and the census tract with the highest EJI score (Census Tract 907.02).

**Figure 11.** Bivariate Analysis of CDC Environmental Justice Index Scores with Total Swine Steady State Live Weights in 2019 NC Census Tracts (County Boundaries)

**Figure 12.** Bivariate Analysis of CDC Environmental Justice Index Scores with Total Swine Steady State Live Weights in 2019 NC Census Tracts (County Boundaries and Labels)

In summary, the five counties with the highest total swine SSLW per square mile were as follows: Duplin, Wayne, Sampson, Robeson, Bladen.

The five counties with the highest quantity of census tracts with both high EJI scores and swine SSLW per square mile  $\geq 92,675.28$  were: Duplin, Wayne, Sampson, Robeson, and Bladen Counties.

## 6. Limitations

### Census Data

Census data is collected at a national level every 10 years. Data used in this report was collected between 2010 - 2019. For each sociodemographic indicator described, the most recent available data since 2020 at a census tract level was utilized. Since not all data from the 2020 census has been published, all data utilized was collected before 2020 to maintain comparability at the tract level. Specific data tables and years available are listed in Appendix A.

Furthermore, reporting affects sample size which then affects interpretation of data. The U.S. Census Bureau uses and provides margins of error which is used as an indicator of potential sampling errors and relative reliability. Due to data availability, 95% confidence intervals were calculated by the Environmental Justice Program for this report. Larger values indicate a wider 95% confidence interval which may indicate potential sampling errors. Lower values indicate a narrow 95% confidence interval and indicates higher accuracy compared to larger values. 95% confidence intervals for each type of permitted facility and sociodemographic indicator is available in Appendix C.

For more information about census data collection methods and sources, please visit [www.data.census.gov](http://www.data.census.gov).

### Cumulative Impacts and Health

As previously mentioned, there is no standardized methodology to assess for cumulative impacts at this current time. This analysis does however examine the factors that may contribute to cumulative impacts, but no formal ranking or index score was generated to quantify cumulative impacts experienced by the counties identified in Section 5 of this report.

This analysis does not establish or imply any direct causal link between the environmental source exposures used in this analysis and health outcomes.

Additionally, NC census tracts from 2019 were used for this analysis since the CDC EJI data uses 2019 U.S. Census Bureau census tracts. Therefore, Section 6 of this report uses 2019 NC census tracts, while Section 3 uses 2020 NC census tracts.

### Permitted Facilities

Based on the dataset pulled on June 2023, the analysis does not include general permits designated as expired by the Department. There is a total of 25 permits designated as expired.

This analysis only uses data for swine, cattle, and wet poultry facilities that are permitted under NC DEQ. Other animal feeding operations in North Carolina that are not required to obtain a permit are not included in this analysis.

Additionally, some facilities with open permits do not currently have livestock and therefore have an attributed value of 0 lbs. for total combined SSLW. These values were outliers that would skew the average SSLW for swine and cattle facilities and therefore may affect the threshold values to determine “80<sup>th</sup> percentile swine/cattle AFO census tracts.” To avoid this, these facilities with open permits were not included in the analysis.

However, it is important to note that these facilities are still under a permit until all waste structures (e.g., lagoons) are closed following appropriate procedures. The waste structures are still present at these facilities, and they must still manage the waste through permitted land application.

## 7. Conclusion

If an affected community has a large percentage of LEP individuals (typically greater than 5%), the Department will implement appropriate LEP measures. These measures may include having a bilingual DEQ staff member or interpreter present at public hearings or information sessions, disseminating Department information sheets or public notices in multiple languages, distributing media notices in different languages, or communicating with community organizations and leaders to determine other appropriate measures to reach LEP individuals. In North Carolina, the Spanish-speaking population is >5% in areas with any swine AFO and 80<sup>th</sup> percentile swine census tracts when compared to the state.

### Potential Cumulative Impacts

In North Carolina, 16 counties had tracts with high EJI scores and total swine SSLW per square mile  $\geq 92,675.28$ . Of the 16 counties, around 87% had a ranking of less or least healthy, based on the 2023 County Health Rankings National Data, compared to the rest of the state. Therefore, these counties and corresponding communities may be at higher risk of potential cumulative impacts.

Overall, 184-identified sensitive receptors within proximity of a swine AFO were documented to assist with planning for community outreach.

### Key Findings

Based on this report's analysis and using NC DEQ Potentially Underserved Block Groups (on the basis of Race/Ethnicity and Poverty) and standard EJ guidelines established by the U.S. EPA and in the NEPA documentation, the key findings are as follows:

- **Census tracts with swine animal feeding operations, and census tracts within or above the 80<sup>th</sup> percentile for swine SSLW/mile<sup>2</sup>, have  $\geq 5\%$  higher or  $\geq 10\%$  higher differences when compared to the state for the following: households which speak Spanish with limited English proficiency ( $\geq 5\%$ ), minority race & ethnic populations ( $\geq 10\%$ ), and populations below the poverty level ( $\geq 10\%$ ).**
- **Census tracts with swine and wet poultry animal feeding operations have a  $\geq 10\%$  higher difference for population of individuals living below 200% of the poverty level when compared to the state.**
- **Census tracts with cattle, swine, and wet poultry animal feeding operations have a  $\geq 10\%$  higher difference in the population of those who live with a disability and who have lower educational attainment when compared to the state. These census tracts also have a  $\geq 10\%$  higher difference in the population whose highest level of education is a high school degree when compared to the state.**
- **Census tracts with wet poultry animal feeding operations have a  $\geq 10\%$  higher difference in populations  $\geq 65$  years of age when compared to the state.**

The following potential environmental justice concerns have been identified:

- **Race and Ethnicity:**

- Total minority populations – census tracts with swine AFOs have a ≥10% higher difference in total minority populations when compared to the state.
  - Specific minority populations – Black or African American, Hispanic or Latino, American Indian or Alaskan Native, Native Hawaiian or Pacific Islander, and those who are two or more races.
- **Tribal Communities**
  - Up to five state or federally recognized tribes or urban Indian organizations residing within counties with census tracts within or above the 80<sup>th</sup> percentile for swine steady-state live weight per square mile, census tracts within or above the 80<sup>th</sup> percentile for cattle steady-state live weight per square mile, or with wet poultry facilities.
- **Age and Sex:** Populations of age 65 and older.
- **Limited English Proficiency:** Spanish-speaking populations.
- **Disability:** Populations with hearing, vision, cognitive, ambulatory, self-care, and independent living difficulties.
- **Education:** Populations whose highest level of educational attainment is less than a bachelor's degree.
- **Poverty:** Populations experiencing poverty below the poverty level and 200% below the poverty level.

## Recommendations

DEQ has committed to a full public engagement process for the general permits, including four public hearings (one virtual) with 60-days of notice, a 90-day comment period, translation and interpretation services for Spanish-speaking residents and enhanced outreach as outlined in the DEQ public Participation Plan.

In addition, the Environmental Justice Program recommends the following outreach for the Animal Feeding Operations General Permits public hearing:

- Generate a one-page flyer in Spanish and English.
- Conduct outreach and media releases through Spanish radio and news outlets as well as non-profits leaders and community leaders with connections to the Spanish-speaking community.
- Arrange an English and Spanish voice mail line to receive public comments by phone.
- Engagement with the following state or federally recognized tribes:
  - Coharie
  - Haliwa Saponi
  - Metrolina Native American Association
  - Lumbee
  - Waccamaw Siouan
- Prioritize outreach to documented identified sensitive receptors by email.
- Ensure the selected site for public hearing(s) has wheelchair accessibility.
- Ensure the selected site for public hearing(s) has enough space for public commenters.
- Consult known community leaders for additional outreach options.

- Appendix G: Sensitive Receptors for Outreach
- Appendix H: AFO Location Data

## Appendix A: Census Data Tables for Sociodemographic Indicators

All data for this report accessed from data.census.gov and collected at a census tract level for all tracts in North Carolina. Data is from 2020 American Community Survey (ACS) 5-year estimates.

Dataset ID	Name
B03002	“Hispanic or Latino Origin by Race”
S0101	“Age and Sex”
S1810	“Disability Characteristics”
C16001	“Language Spoken at Home for the Population 5 Years and Older”
S1501	“Educational Attainment”
S1701	“Poverty Status in the Last 12 Months”

The following table displays data for the [2022 Biogas Digester General Permit Development Environmental Justice Report](#).

Dataset ID	Name	Year Used	Period of Record
P2	“Hispanic or Latino, and Not Hispanic or Latino by Race”	2020	10-year estimate
C16002	“Household Language by Household Limited English Speaking Status”	2019	5-year
S1701	“Poverty Status in the Last 12 Months”	2019	5-Year

## Appendix C: Sociodemographic Indicators

The tables below display calculations performed from census data for each sociodemographic indicator. Calculations are displayed as averages. Tables also display the totals from which percentages were generated to be used for the sociodemographic analysis.

Tables for the **All Swine and All Cattle Census Tracts** section include tables comparing the percentage differences for each sociodemographic indicator analyzed in this report. **Bolded** items indicate a 10% increase in the calculated percentage for the indicator's category when compared to the State.

**80<sup>th</sup> percentiles of Swine, 80<sup>th</sup> percentile of Cattle, and Wet Poultry**

## Appendix E: CDC Environmental Justice Index Model

Ranking calculated by multiplying the sum of health vulnerability flags ( $n = 5$ ) by 0.2 to produce a number between 0 - 1. Note: Due to a lack of scientific evidence supporting a specific weighting scheme, all modules are weighted equally in calculating the Overall EJI Score. This method of equal weighting for all modules aligns with that used by the Environmental Justice Screening Method (Sadd et al., 2011). Overall EJI Scores are percentile ranked to produce a final EJI Ranking with a range of between 0 - 1
