¹Active and expired permitted facilities and associated permit data were queried from the NC DWR Basinwide Management Systems (BIMS) in May 2022. Expired permits remain in effect until a renewed permit is issued by DWR.

²Only outfalls and associated receiving streams that are currently active or have been active in recent years and currently have an active/expired permit are included in table records.

³NC0078344 (Tar Heel Plant) and NCG590020 (Bladen Bluffs Regional Surface WTP) discharge to the Lower Cape Fear subbasin but have facilities located in the Lumber, NC0088692 is located in the Haw subbasin and discharges to the Roanoke River Basin and was not included.

⁴The permitted NPDES facility HUC8 is based on the location of the facility not the outfall with the exception of NC0078344 and NCG590020. Some facilities have a single permitted discharge for outfalls located in two different HUC8s. The NC0082295 facility is located in in the Northeast subbasin and discharges 0.834 MGD to the Lower Cape Fear subbasin.

⁵Permit NC0020354 - The town of Pittsboro has two permitted outfalls, the existing outfall 001 which discharges to the Robeson Creek and the proposed outfall 002 which will discharge to the Haw River in the future.

⁶Permit NC0087947 – Columbus County Wastewater Treatment Plant is holding onto their permit but at as of 2018 they are no longer discharging due to loss of sole industrial user. They are retaining their permit, so they have the right to discharge to Livingston Creek again in the future.

⁷Permit NC0057533 – This is the New Brunswick County WTP with proposed RO discharge to outfall 002. They have two discharge points. 001 with the traditional backwash water into Hood Creek and their new RO water discharged to the Cape Fear River outfall 002 which they have not started discharging to yet.

⁸Permit NC0040061 – water treatment plant - has three permitted outfalls. Only 001 is approved to discharge filtered backwash water to Beaverdam Creek. The other two (002 & 003) are for filtered potable water to Beaverdam and were not included in the permit record.

Non-Discharge and Land Application of Residual Solids

Table 2: Non-Discharge and Land Application of Residual Solids Permits (May 2022)

¹Active and expired permitted facilities and associated fields were queried from the NC DWR Basinwide Management Systems (BIMS) in May 2022. Expired permits remain in effect until a renewed permit is issued by DWR.

²The HUC10 shown on this table are based on the location of the permitted facility location and not the associated fields. All fields shown in this table are located in the Cape Fear River Basin but some permitted fields may not be located in the same HUC10, HUC8, or river basin as their associated facility.

Cape Fear River Basin Total Permits 1,188 (39 Animal Individual State, 26 Cattle State, 5 Swine NPDES, 1,118 Swine State)										
Total Basinwide						5,517,021	749,509,148	2,250		

¹Active and expired permitted facilities and associated permit data were queried from the NC DWR Basinwide Management Systems (BIMS) in May 2022. Expired permits remain in effect until a renewed permit is issued by DWR.

²Allowable Count is the maximum number of individual animals allowed in the facility/farm at any one time.

³Allowable Live Weight represents the total pounds of animal biomass permitted on the facility/farm, calculated by applying a conversion factor to the number of animals based on USDA-NRCS guidelines based on animal type and life stage of the animals grown.

Table 5: Animal Feeding Operations with associated enforcement cases between 2015 and 2022 time frame.
